A leading expert in childhood development makes the case for why self-directed learning -- "unschooling" -- is the best way to get kids to learn. In *Free to Learn*, developmental psychologist Peter Gray argues that in order to foster children who will thrive in today's constantly changing world, we must entrust them to steer their own learning and development. Drawing on evidence from anthropology, psychology, and history, he demonstrates that free play is the primary means by which children learn to control their lives, solve problems, get along with peers, and become emotionally resilient. A brave, counterintuitive proposal for freeing our children from the shackles of the curiosity-killing institution we call school, *Free to Learn* suggests that it's time to stop asking what's wrong with our children, and start asking what's wrong with the system. It shows how we can act -- both as parents and as members of society -- to improve children's lives and to promote their happiness and learning.

*The first half of the book focuses on broader questions and principles taken from psychology per se, and the second half focuses on somewhat more practical issues of teaching. All parts of the book draw on research, theory, and practical wisdom wherever appropriate. Chapter 2 is about learning theory, and Chapter 3 is about development. Chapter 4 is about several forms of student diversity, and Chapter 5 is about students with disabilities. Chapter 6 is about motivation. Following these somewhat more basic psychological chapters, we turn to several lasting challenges of classroom life--challenges that seem to be an intrinsic part of the job. Chapter 7 offers ideas about classroom management; Chapter 8, ideas about communicating with students; Chapter 9, about ways to assist students' complex forms of thinking; and Chapter 10, about planning instruction systematically. The book closes with two chapters about assessment of learning.*

*There are aliens out there, and we're part of their family tree. It's the dawn of the 26th century and humanity has come into contact with three other alien species. To freighter captain Nick Roan, their existence is just another fact of life, much like Earth's depressed economy and his recent failed romance. But a scientist friend's discovery brings Roan to the center of galactic intrigue. The scientist has been looking into panspermia, a theory that suggests life as we know it was seeded by a passing comet. He wants Roan to help*

*transport him to the comet's supposed origin and possibly prove all four species share the same lineage. Roan thinks the story is bull...until the friend is murdered. From then on, it's a chase through the stars. Pursued by a maniacal alien commander who wants the glory of the discovery for himself, Roan hitches a ride on his ex-lover's freighter and embarks on a quest to answer the age-old question: where did we come from?*

*There are numerous textbooks that explain the theories and principles of psychology, but many are too dry or academic. Idiot's Guides: Psychology, 5th Edition breaks down the complexity of psychology and helps readers understand the how and why of the human mind, the causes of things like mental illness, how we react to situations, and how we become who we are. The book steers clear of self-help and pop psychology and focuses on more of an academic approach. Key concepts are broken down into plain and simple language, and supplemented with insightful illustrations that help explain each concept in a visual format that is fun and engaging. Readers start with the root of the human mind and move into the most popular theories of modern psychology, while exploring the lives and genius (and madness) behind the most famous pioneers in the field, such as Freud and Jung. From behaviorism to social psychology to cognitive psychology, readers will learn what makes all of us tick, and why we are who we are.*

*Peter Gray's evolutionary perspective and emphasis on critical thinking have made his rigorous yet accessible introduction to psychology a widely respected classroom favourite, edition after edition. Now thoroughly revised, with the help of co-author David Bjorklund, Psychology invites and stimulates students to investigate the big ideas in psychological science. Psychology can also be purchased with the breakthrough online resource, LaunchPad, which offers innovative media content, curated and organised for easy assignability. **An m/m World War II-era retelling of Beauty and the Beast. During a chance summer shower, an English country parson takes refuge in a country house. The house seems deserted, yet the table is laid with a sumptuous banquet such as the parson has not seen since before war rationing. Unnerved by the uncanny house, he flees, but stops to pluck a single perfect rose from the garden for his daughter - only for the master of the house to appear, breathing fire with rage. Literally. At first, the parson can't stand this dragon-man. But slowly, he begins to feel the injustice of the curse that holds the dragon captive. What can break this vengeful curse?**

**This volume examines the phenomenon of fake news by bringing together leading experts from different fields within psychology and related areas, and explores what has become a prominent feature of public discourse since the first Brexit referendum and the 2016 US election campaign. Dealing with misinformation is important in many areas of daily life, including politics, the marketplace, health communication, journalism, education, and science. In a general climate where facts and misinformation blur, and are intentionally blurred, this book asks what determines whether people accept and share (mis)information, and what can be done to counter misinformation? All three of these aspects need to be understood in the context of online social networks, which have fundamentally changed the way information is produced, consumed, and transmitted. The contributions within this volume summarize the most up-to-date empirical findings, theories, and applications and discuss cutting-edge ideas and future directions of interventions to counter fake news. Also providing guidance on how to handle misinformation in an age of "alternative facts", this is a fascinating and vital reading for students and academics in psychology,**

communication, and political science and for professionals including policy makers and journalists.

A Scientific Delusion?

An Introduction to Industrial and Organisation Psychology

*Includes a foreword by Major General David A. Rubenstein. From the editor: "71F, or "71 Foxtrot," is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists apply their extensive training and expertise in the science of psychology and social behavior toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army Research Psychologists "do for a living." In addition to our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the "grey-beards" of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army and the total force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for protecting the health, well being, and performance of Soldiers and their families."*

*One day Sophie comes home from school to find two questions in her mail: "Who are you?" and "Where does the world come from?" Before she knows it she is enrolled in a correspondence course with a mysterious philosopher. Thus begins Jostein Gaarder's unique novel, which is not only a mystery, but also a complete and entertaining history of philosophy.*

**Children are born full of curiosity, eager to participate in the world. They learn as they live, with enthusiasm and joy. Then we send them to school. We stop them from playing and actively exploring their interests, telling them it's more important to sit still and listen. The result is that for many children, their motivation to learn drops dramatically. The joy of the early years is replaced with apathy and anxiety. This is not inevitable. We are socialised to believe that schooling is synonymous with education, but it's only one approach. Self-directed education puts the child back in control of their learning. This enables children, including those diagnosed with special educational needs, to flourish in their own time and on their own terms. It enables us to put wellbeing at the centre of education. Changing Our Minds brings together research, theory and practice on learning. It includes interviews with influential thinkers in the field of self-directed education and examples from families alongside practical advice. This essential guide will give you an understanding of why self-directed education makes sense, how it works, and what to do to put it into action yourself.**

**This book examines human psychology and behavior through the lens of modern evolutionary psychology. Evolutionary Psychology: The New Science of the Mind, 5/e provides students with the conceptual tools of evolutionary psychology, and applies them to empirical research on the human mind. Content topics are logically arrayed, starting with challenges of survival, mating, parenting, and kinship; and then progressing to challenges of group living, including cooperation, aggression, sexual conflict, and status, prestige, and social hierarchies. Students gain a deep understanding of applying evolutionary psychology to their own lives and all the people they interact with.**
