Urban Transport IX

The UK fuel tax protests of September 2000 generated considerable debate about fuel prices and taxation and put transport in the media spotlight. Away from the immediate events and debates surrounding the protests, the experience offered the opportunity for longer-term lessons on transport to be gained. The editors of this volume, Glenn Lyons and Kiron Chatterjee, saw the opportunity to get fresh insight into car dependence and conducted a large-scale travel behaviour survey to find out how car users coped when restricted in being able to buy petrol.

This book presents their findings and collects together articles written by other researchers on a range of topics including fuel taxation, transport pricing, policy acceptability, travel behaviour and goods distribution.

The world's cities are choking on pollution from traffic and industry. With the health of over 1.6 billion people under threat, poor urban air quality is fast becoming one of them most pressing environmental problems of our times. Smog Alert examines the causes and scale of urban air pollution, identifying who is most at risk, and what particular health risks various

pollutants pose. It then considers an effective framework for air quality management, so that national and city authorities can consider what pollution control polices and measures are needed to deliver healthy urban air quality, and to sustain it in the future. Having established the background and framework, the book examines the existing and alternative measures to monitor and combat the declining air quality. It assesses smog alert systems; the potential for cleaner car and fuel technology; sustainable traffic management and public transport policies; and

methods of controlling both industrial and residential emissions. Detailed case studies illustrate the severity and breadth of the problem - from the first serious photochemical smogs in Los Angeles to the dire warning offered by Mexico City; and from London (the city which coined the word 'smog') to Athens' pollution phenomenon, the 'nefos'. Drawing on the lessons learned from past experience, Smog Alert provides a comprehensive analysis of how health air quality may yet be achieved in the world's cities.

This comprehensive account of the past, present and future of the automobile examines the key trends, key technologies and key players involved in the race to develop clean, environmentally friendly vehicles that are affordable and that do not compromise on safety or design. Undertaking a rigorous interrogation of our global dependency on oil, the author demonstrates just how unwise and unnecessary this is in light of current developments such as the fuel cell revolution and the increasing viability of hybrid cars, which use both petrol and electricity - innovations that could signal a new era of clean, sustainable energy. The arguments put forward

The performance of current transport systems is inadequate when viewed in terms of economic efficiency, sustainability and safety. Drawing together key an impressive list of contributors from the vast field of transportation economics including Kenneth Button, David Banister and Juan Carlos Martín, this book investigates transport systems, and covers a wide range of topics such as: airline markets congestion charging speed control. This informative book, ideal for undergraduate and postgraduate students of economics, business and industrial studies examines the tools that are necessary to effectively measure transport systems and those that are required to improve them. Utilizing advanced tools of network analysis, the contributors challenge various pieces

of conventional wisdom, in particular the view that intermodal transport is more environmentally benign than road transport.

The issue of urban transportation, together with its inter-related environmental and social concerns, continues to rise up the agenda of all city authorities and central governments. Reflecting the wide range of research being carried out in many countries today, and highlighting urban transport systems, traffic control, accessibility and mobility, control and simulation, finance, air quality and noise, and social issues and safety, this volume features papers presented at the Ninth International Conference on Urban Transport and the Environment in the 21st Century. The material included should be of

A definitive guide to the Peugeot 205, the unassuming car that saved Peugeot in the 1980s and went on to become a rally-winning legend. With technical specification details and a full production history from 1983-1999, Peugeot 205 - The Complete Story is an ideal resource for enthusiasts of the car that is now considered an

automotive classic. With some previously unseen photographs, the book covers the M24 project - the genesis of the 205; the legendary 1.6 and 1.9 GTI models and the popular CTI convertibles and other special editions. Advice is given on buying, maintaining and modifying 205s today and finally, there is an exclusive interview with rallying legend Ari Vatanen. The Peugeot 205 is well on the way to becoming an established part of the classic car scene, and here is the complete history covering the design, development and launch and including the legendary 106 and 1.9 GTI. Superbly illustrated with 270 previously unseen colour photographs.

Scholars of human relations,

psycho-social studies, and communications review the extensive literature on advertising in sociology and cultural studies, report the results of a study they did at the University of East London on changes in advertising over the past half century, and develop a method for the psycho-social study of all forms of public communication and of other aspects of daily life. They argue that advertising is far more closely linked to the pragmatics of everyday life than their symbolic richness might suggest.
