The development of new technology means that compromised patients previously confined to hospital may now be treated at home. Those patients receiving intravenous feeding, cytotoxic drugs and new insulin therapy, are fully trained by the health-care professionals (doctors, pharmacists and nurses) to encourage self-reliance and understanding which are vital to success. There are hazards in treating these patients in the home environment, e.g. microbiological risks which are currently being evaluated, failure of equipment, and social problems as patients adjust to a new life in the community. Nevertheless, the balance of benefits favour restoration of the patient to a self-reliant positive life at home. The delivery of this important new dimension in therapy was described at a symposium held in the University of York by innovators in the field. Discussion enabled the core of knowledge and experience developed by multi-disciplinary teams to be shared. The problems of supplying parenteral nutrition and medication for the compromised patient in the home and the family situation were aired and solutions presented. The special care for hospital out-patients receiving cytotoxic drug therapy and safe procedures for staff handling these agents was presented and together with responses to questions indicated the direction for UK hospital pharmacists to follow. More information is needed and it is hoped that this account of these proceedings will stimulate interest in these aspects of health care.

**The SAGE Encyclopedia of Pharmacology and Society explores the social and policy sides of the pharmaceutical industry and its pervasive influence in society. While many technical STM works explore the chemistry and biology of pharmacology and an equally large number of clinically oriented works focus on use of illegal drugs, substance abuse, and treatment, there is virtually nothing on the immensely huge business ("Big Pharma") of creating, selling, consuming, and regulating legal drugs. With this new Encyclopedia, the topic of socioeconomic, business and consumer, and legal and ethical issues of the pharmaceutical industry in contemporary society around the world are addressed. Key Features: 800 signed articles, authored by prominent scholars, are arranged A-to-Z and published in a choice of electronic or print formats Although arranged A-to-Z, a Reader's Guide in the front matter groups articles by thematic areas Front matter also includes a Chronology highlighting significant developments in this field All articles conclude with Further Readings and Cross References to related articles Back matter includes an annotated Resource Guide to further research, a Glossary, Appendices (e.g., statistics on the amount and types of drugs prescribed, etc.), and a detailed Index The Index, Reader's Guide, and Cross References combine for search-and-browse capabilities in the electronic edition The SAGE Encyclopedia of Pharmacology and Society is an authoritative and rigorous source addressing the pharmacology industry and how it influences society, making it a must-have reference for all academic libraries as a source for both students and researchers to utilize.**
