More than 48 million Americans suffer from hearing loss, and audiologists agree this is a national epidemic. **LIVING BETTER WITH HEARING LOSS** is a practical guide to daily life with hearing loss, covering topics from hearing tests and buying (and paying for) hearing aids, to deciding whether to get a cochlear implant, to navigating airports, job interviews, and first dates when you suffer from hearing loss. Useful and readable for the newly hearing-impaired, those who have been struggling for years, and their families. Author Katherine

Bouton has also written *Shouting Won't Help*, a memoir of her adult-onset hearing loss.

People often ask, "Why Seniors?" My response is always the same, "Why NOT Seniors?" I have always had an unwavering desire to serve and protect the elderly. Even as a child, when given the opportunity to choose, my choice was always to be in the company of the "older folk". I have found their wisdom and conversation to be priceless. For Seniors, living independently during their golden years can be an enjoyable and rewarding time of life. Most desire to maintain their dignity, quality of life, and independence while living at home. Sounds simple enough. However,

what I have found to be true, both professionally and personally, is that things aren't always so simple. As a very young adult, I can recall experiencing the loss of my maternal great-grandmother. Having not been afforded the knowledge that I currently possess, watching her cognitive decline over a 5-year span was painful. On the day of her funeral, I can still recall feeling as though I'd lost my grandmother several years prior. A better understanding of her diagnosis would have added more quality to the time we shared. Experiencing the loss of my paternal grandmother was another taxing experience. Though her diagnosis did not rob her of her

cognitive ability, Cancer certainly took everything else. During this experience, my knowledge base for the situation was greater.

Therefore, medical attention, placement, and long-term planning were much easier. Most recently, the loss of my maternal grandfather was a challenge that tugged on every ounce of knowledge, experience, and emotion possible. Within a 7-month period, I watched my grandfather drift from what most called, "The World's Oldest Teenager" to being completely bedridden and dependent on others for care. Heart attack, stroke, cancer, kidney failure, dialysis, feeding tube, tracheostomy, cardiac arrest, and resuscitation were only

among the most significant challenges that he endured. Fortunately, my family and I were able to make "informed" decisions to assure that he maintained quality of life. Working in Senior care for over 20 years, I have been exposed to all aspects. I have consoled weeping widows. I have found placement for seniors who have no family. I have advocated for seniors who were mistreated by family and/or professionals. I have found assistance for seniors that wanted to remain at home but needed a little help. I have helped family to understand that Hospice is actually very beneficial and not death sentence. I have hired good caregivers. I have terminated poor

caregivers. I have also provided Psychotherapy for seniors who suffer from depression and anxiety. In short, Seniors and their families experience the same issues as those in other populations. For me, it is a God-given charge that I do all that is within my power to assure that this population is provided with the supports needed to be safe, healthy, and happy.

Preface to Action

An inspirational memoir about how Jennifer Pastiloff's years of waitressing taught her to seek out unexpected beauty, how hearing loss taught her to listen fiercely, how being vulnerable allowed her to find love, and how imperfections can lead to a life full of wild happiness. Centered around the touchstone stories Jen tells in her popular workshops, On Being Human is the story of how a starved person grew into the exuberant woman she was meant to be all

along by battling the demons within and winning. Jen did not intend to become a yoga teacher, but when she was given the opportunity to host her own retreats, she left her thirteen-year waitressing job and said “yes,” despite crippling fears of her inexperience and her own potential. After years of feeling depressed, anxious, and hopeless, in a life that seemed to have no escape, she healed her own heart by caring for others. She has learned to fiercely listen despite being nearly deaf, to banish shame attached to a

body mass index, and to rebuild a family after the debilitating loss of her father when she was eight. Through her journey, Jen conveys the experience most of us are missing in our lives: being heard and being told, "I got you." Exuberant, triumphantly messy, and brave, On Being Human is a celebration of happiness and self-realization over darkness and doubt. Her complicated yet imperfectly perfect life path is an inspiration to live outside the box and to reject the all-too-common belief of "I am

Hearing loss doesn't come with an operating manual—until now. If you have hearing loss, you already know that the conventional approach to treatment is focused on hearing-aid technology. Without a handbook to help you figure out how to actually live with it, you've likely been getting by on information pieced together from various sources—and yet, communication often seems incomplete and unsatisfying. What's missing from this hearing care model is the big picture—a real-life illustration of how hearing

loss, its emotions, and its barriers affect every corner of your life. Now, hearing-health advocates, consultants, and speakers Shari Eberts and Gael Hannan offer a new skills-based approach to hearing loss that is centered not on hearing better, but on communicating better. With honesty and humor, they share their own hearing loss journeys, and outline invaluable insights, strategies, and workarounds to help you engage with the world and be heard. You'll gain tips for navigating all areas impacted by hearing loss, including

This book explores the significance of silence within and beyond pedagogical contexts. Silence is a complex and multidimensional phenomenon for everyday life: since schools mirror society, it is also significant in education. While silence can be experienced in a multitude of different ways, the author reflects on whether silence itself can bear a message: is there an aspect of dialogue in silence, or is it a language all of its own? This book examines a variety of silences essential for education, examining such topics as silence and aspects of power, silent students, and the relationship

between listening and silence. Drawing on a range of empirical data, the author elucidates the significance of silence in pedagogical contexts. Cochlear implants are currently the standard treatment for profound sensorineural hearing loss. In the last decade, advances in auditory science and technology have not only greatly expanded the utility of electric stimulation to other parts of the auditory nervous system in addition to the cochlea, but have also demonstrated drastic changes in the brain in responses to electric stimulation, including changes in language development and music perception. Volume 20 of SHAR focused on basic science and technology underlying the cochlear

implant. However, due to the newness of the ideas and technology, the volume did not cover any emerging applications such as bilateral cochlear implants, combined acoustic-electric stimulation, and other types of auditory prostheses, nor did it review brain plasticity in responses to electric stimulation and its perceptual and language consequences. This proposed volume takes off from Volume 20, and expands the examination of implants into new and highly exciting areas. This edited book starts with an overview and introduction by Dr. Fan-Gang Zeng. Chapters 2-9 cover technological development and the advances in treating the full spectrum of ear disorders in the last ten years. Chapters 10-15 discuss brain responses

to electric stimulation and their perceptual impact. This volume is particularly exciting because there have been quantum leap from the traditional technology discussed in Volume 20. Thus, this volume is timely and will be of real importance to the SHAR audience.

The surprising science of hearing and the remarkable technologies that can help us hear better Our sense of hearing makes it easy to connect with the world and the people around us. The human system for processing sound is a biological marvel, an intricate assembly of delicate membranes, bones, receptor cells, and neurons. Yet many people take their ears for granted, abusing them with loud restaurants, rock concerts, and Q-tips. And then, eventually, most of us start to go deaf. Millions of Americans suffer from hearing loss. Faced with the cost and stigma

of hearing aids, the natural human tendency is to do nothing and hope for the best, usually while pretending that nothing is wrong. In Volume Control, David Owen argues this inaction comes with a huge social cost. He demystifies the science of hearing while encouraging readers to get the treatment they need for hearing loss and protect the hearing they still have. Hearing aids are rapidly improving and becoming more versatile. Inexpensive high-tech substitutes are increasingly available, making it possible for more of us to boost our weakening ears without bankrupting ourselves. Relatively soon, physicians may be

able to reverse losses that have always been considered irreversible. Even the insistent buzz of tinnitus may soon yield to relatively simple treatments and techniques. With wit and clarity, Owen explores the incredible possibilities of technologically assisted hearing. And he proves that ears, whether they're working or not, are endlessly interesting.

Little Bridget is acting strangely and no one seems to notice-except her older sister. She notices everything. When the rest of her family finally realizes that Bridget has been ignoring the world around her and inventing weird words, it leads to a startling diagnosis no one

binaural stimulation. The first published study on binaural interference twenty-five years ago demonstrated that some individuals, particularly older individuals, perform more poorly with two hearing aids than with one and/or more poorly with binaural than monaural stimulation on electrophysiologic as well as behavioral measures. Binaural interference is relevant to every audiologist because it impacts the successful use of binaural hearing aids and may explain communicative difficulty in noise or other challenging listening situations in persons with normal-hearing sensitivity as well as persons with

hearing loss. This exciting new book written by two highly respected audiologists first traces the history of its study by researchers, then reviews the evidence, both direct and indirect, supporting its reality. This is followed by a discussion of the possible causes of the phenomenon and in-depth analysis of illustrative cases. The authors outline a systematic approach to the clinical detection, evaluation and amelioration of individuals who exhibit binaural interference. Suggestions are furnished on improved techniques for evaluation of the binaural advantage in general and on sensitized detection of the disorder in particular. The book ends with recommendations for future

directions. Given the adverse impact of binaural interference on auditory function and its occurrence in a significant subset of the population with hearing loss, as well as in some individuals with normal-hearing sensitivity, research on binaural interference only recently has begun to flourish, and adaptation of audiologic clinical practice to identify, assess, and manage individuals with binaural interference has yet to become widespread. The authors intend for the book to provide impetus for pursuing further research and to encourage audiologists to explore the possibility of binaural interference when patient complaints suggest it and when performing

audiologic evaluations. The book is intended for practicing clinical audiologists, audiology students, and hearing scientists.

Thoroughly updated for its Second Edition, this book provides an in-depth discussion on prosthetic restoration of hearing via implantation. The text succinctly discusses the scientific principles behind cochlear implants, examines the latest technology, and offers practical advice on how to assess candidates, how to implant the devices, and what rehabilitation is most effective. The authors thoroughly examine the outcomes of cochlear implantation, the impact on the patient's quality of life, the
