The universalist view that acquisition of phonology is guided by universal principles has been the dominant position for decades. More recently, an alternative view has brought into focus the relationship between developmental markedness. With entirely original chapters on non-ambient-like productions by typically and atypically developing children, and second language learners, Unusual Productions in Phonology delves deeply into these competing explanations to show that p themselves to one or the other explanations. Rather, they point towards the need for both universal markedness and statistical input considerations in any attempted explanation. Containing contributions from leading researchers from around the world, this book must-have resource for any researcher, practitioner, or advanced student specializing in phonology, cognitive psychology, applied linguistics, and communication disorders.

"If a student researcher had only one handbook on their bookshelf, Miller and Salkind's Handbook would certainly have to be it. With the updated material, the addition of the section on ethical issues (which is so well done that I'm recommending it to the departmental representatives), and a new Part 4 on "Qualitative Methods", the new Handbook is an indispensable resource for researchers." Dan Cover, Department of Sociology, Furman University The book considered a "necessity" by many social science researchers and their students has been revised and updated to retain the features that made it so useful. The emphasis in this new edition is on the tools with which graduate students and more advanced researchers need to become familiar as well as be able to use in order to conduct high quality research.

Like many other medical and health-related professions, the speech-language pathology and audiology professions have been responding to the changes in the ways in which healthcare is delivered. These changes are occurring at the federal and state levels due to changes in legislative and regulatory policies. To this end and as a result of reports from the World Health Organization (2010, 2011, 2013) and the Institute of Medicine (2000, 2001, 2015), healthcare professionals are now addressing healthcare service delivery within an interprofessional, collaborative, and patient-centered outcomes context. This volume of Pediatric Clinics will present articles that address clinical care to a variety of pediatric speech and language clinical populations. While it will be the intent of each piece to address interprofessional perspectives of care, the opening and closing paragraphs will introduce and then synthesize, all of the articles into a cogent volume. Articles are devoted to the following topics: The Journey to Interprofessional Practice: Are We There Yet; Late Talkers: Why the 'Wait and See' Approach is Outdated; A Pediatrician's Guide to Cleft Palate Speech and Language; Causes of Velopharyngeal Insufficiency (VPI); Supporting Children with Autism and Their Families: A Model for Interprofessional Practice; Feeding Problems in Infants and Children: Assessment and Etiology; A Multidisciplinary Team Approach to the Differential Diagnosis of Childhood Communication Disorders: Open Up and Let Us In: An Interdisciplinary Approach to Oral Health; Otitis Media: Beyond the Examining Room: Clinical Perspectives on Pre-Literacy Development in Young Children: Using the ICF Framework to Achieve Interprofessional Functional Outcomes in Young Children: A Speech-Language Pathology Perspective: Developmental Care of the Pre-Term Infant: From NICU Through High-Risk Infant Follow Up: Interprofessional Collaborative Practice: What That Means for Early Intervention Service Delivery; The Role of the Speech-Language Pathologist in the Pediatrician's Office: Creating a Model for Interprofessional Practice in an Ambulatory Care Clinic; and Identification of Speech and Language Delays in Young Children: An Important Collaborative Role for the Pediatrician.
