

Physical Geology Lab Manual Teachers Edition

If it's important for you to incorporate the scientific method into your teaching, this lab manual is the perfect fit. In every exercise there are scientific method boxes that provide students with insight into the relevance of the scientific method to the topic at hand. The manual also includes "In Greater Depth" problems, a more challenging probe into certain issues. They are more quantitative in nature and require more in-depth, critical thinking, which is unique to this type of manual.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. This user-friendly, best-selling lab manual examines the basic processes of geology and their applications to everyday life. Featuring contributions from over 170 highly regarded geologists and geoscience educators, along with an exceptional illustration program by Dennis Tasa, Laboratory Manual in Physical Geology, Ninth Edition offers a new activities-based approach that gives you a more complete learning experience in the lab.

A hands-on, visual learning experience for physical geology This easy-to-use, easy-to-learn-from laboratory manual for physical geology employs an interactive question-and-answer format that engages the student right from the start of each exercise. Tom Freeman, an award-winning teacher with 30 years experience, takes a developmental approach to learning that emphasizes principles over rote memorization. His writing style is clear and inviting, and he includes scores of helpful hints to coach students as they tackle problems. The Third Edition of this loose-leaf manual features brand new exercises, data, and graphics. All new exercises have been field-tested and they contain more real world examples and Web links. The instructor's guide has been expanded and provides more information on current changes in the field. Continuing Tom L. McKnight's well-known thematic focus on landscape appreciation, Darrel Hess offers a broad survey of all of the physical processes and spatial patterns that create Earth's physical landscape. McKnight's Physical Geography: A Landscape Appreciation provides a clear writing style, superior art program, and abundant pedagogy to appeal to a wide variety of students. This new edition offers a truly meaningful integration of visualization, technology, the latest applied science, and new pedagogy, providing essential tools and opportunities to teach and engage students in these processes and patterns.

***The Blueprints to Our Home: A Physical Geology Laboratory Manual introduces the reader to the physical processes governing our planet and demonstrates how the multiple branches of science intersect to describe our world. Developed for a full term of lab work, this supplemental text gives the users hands-on, problem-solving experience by requiring the application of practical geologic concepts. Designed to educate students about both academic and applied geology, this laboratory manual addresses issues concerning how our home, the Earth, was built, how it continues to be remodeled, where all of our resources are stored, how to keep our living space clean and healthy, and how to identify and protect ourselves against inherently dangerous areas. The accessible writing style helps readers understand the "why" behind the "what" and provides practical, problem-solving exercises that demonstrate the nature of scientific inquiry and the scientific method. The goal of this publication to equip students with the knowledge and tools they need to take advantage of the countless benefits our planet offers, while minimizing the risk of encountering potential hazards. As such, developing the necessary skills to read the blueprints of our home will foster an appreciation for the magnificence and complexity with which our planet operates and a desire to preserve and protect it. Eli Pauil completed a double B.S. in Marine Science and Geology at the University of Miami in Coral Gables, FL and was awarded an M.S. in Geochemistry from George Washington University. She is now the laboratory coordinator for the introductory geology courses at George Washington University, and is a professional lecturer in numerous colleges and universities throughout the Washington Metro Area, teaching classes in Environmental Geology, Physical Geology, Physical Geography and Geo-hazards and Land-use Planning. She has also worked with the Smithsonian Institution Museum of Natural History in the Department of Mineral Sciences and United States Geological Survey.**
