History of the Calcutta School of Physical Sciences

Oswaal CBSE Chapterwise & Topicwise Question Bank Class 12 Chemistry Book (For 2022-23 Exam)

Oswaal CBSE Chapterwise & Topicwise Question Bank Class 12 Entrepreneurship Book (For 2022-23 Exam)

Geophysical Abstracts, 184 January-March 1961

**This book highlights the role of Sir Asutosh Mookerjee, founder of the Calcutta school of physics and the Calcutta Mathematical Society, and his talented scholars – Sir C.V. Raman, D.M. Bose, S.N. Bose, M.N. Saha, Sir K.S. Krishnan and S.K. Mitra – all of whom played a significant role in fulfilling their goal of creating an outstanding school of physical sciences in the city of Calcutta. The main objective of the book is to bring to the fore the combined contributions of the greatest physicists of India, who in the colonial period worked with practically no modern amenities and limited financial resources, but nonetheless with total dedication and self-confidence, which is unmatched in today's world. The book presents the golden age of the physical sciences in India in compact form; in addition, small anecdotes, mostly unknown to many, have been brought the forefront. The book consists of 10 chapters, which include papers by these distinguished scientists along with detailed accounts of their academic lives and main research contributions, particularly during their time in Calcutta. A synopsis of the contents is provided in the introductory chapter. In the following chapters, detailed discussions are presented in straightforward language. The complete bibliographies of the great scientists have been added at the end. This book will be of interest to historians, philosophers of science, linguists, anthropologists, students, research scholars and general readers with a love for the history of science.**

**Consisting of separate cases organized by chapter and divided into independent sections, this is no ordinary history of science book. Between the Earth and the Heavens is an episodic history of modern physical sciences covering the chronological development of physics, chemistry and astronomy since about 1860. Integrating historical authenticity and modern scientific knowledge, the cases within deal with the often surprising connections between science done in the laboratory (physics, chemistry) and science based on observation (astronomy, cosmology).Between the Earth and the Heavens presupposes an interest in and a certain knowledge of the physical sciences, but it is written for non-specialists and includes only a limited number of equations which are all clearly explained in simple terms. For readers who wish to delve further, the book is fully documented and ends with a bibliography of cited quotations and other relevant sources.**

*Competition Science Vision* (monthly magazine) is published by Pratiyogita Darpan Group in India and is one of the best Science monthly magazines available for medical entrance examination students in India. Well-qualified professionals of Physics, Chemistry, Zoology and Botany make contributions to this magazine and craft it with focus on providing complete and to-the-point study material for aspiring candidates. The magazine covers General Knowledge, Science and Technology news, Interviews of toppers of examinations, study material of Physics, Chemistry, Zoology and Botany with model papers, reasoning test questions, facts, quiz contest, general awareness and mental ability test in every monthly issue.

*This book is about the idea of space in the first half of the nineteenth century. It uses contemporary poetry, essays, and fiction as well as scientific papers, textbooks, and journalism to give a new account of nineteenth-century literature's relationship with science. In particular it brings the physical sciences - physics and chemistry - more accessibly and fully into the arena of literary criticism than has been the case until now. Writers whose work is discussed in this book include many who will be familiar to a literary audience (including Wordsworth, Coleridge, and Hazlitt), some well-known in the history of science (including Faraday, Herschel, and Whewell), and a raft of lesser-known figures. Alice Jenkins draws a new map of the interactions between literature and science in the first half of the nineteenth century, showing how both disciplines were wrestling with the same central political and intellectual concerns - regulating access to knowledge, organising knowledge in productive ways, and formulating the relationships of old and new knowledges. Space has become a subject of enormous critical interest in literary and cultural studies. Space and the 'March of Mind' gives a wide-ranging account of how early nineteenth-century writers thought about - and thought with - space. Burgeoning mass access to print culture combined with rapid scientific development to create a crisis in managing knowledge. Contemporary writers tried to solve this crisis by rethinking the nature of space. Writers in all genres and disciplines, from all points on the political spectrum, returned again and again to ideas and images of space when they needed to set up or dismantle boundaries in the intellectual realm, and when they wanted to talk about what kinds of knowledge certain groups of readers wanted, needed, or deserved. This book provides a rich new picture of the early nineteenth century's understanding of its own culture.*
