Competition Science Vision (monthly magazine) is published by Pratiyogita Darpan Group in India and is one of the best Science monthly magazines available for medical entrance examination students in India. Well-qualified professionals of Physics, Chemistry, Zoology and Botany make contributions to this magazine and craft it with focus on providing complete and to-the-point study material for aspiring candidates. The magazine covers General Knowledge, Science and Technology news, Interviews of toppers of examinations, study material of Physics, Chemistry, Zoology and Botany with model papers, reasoning test questions, facts, quiz contest, general awareness and mental ability test in every monthly issue.

Mechanical engineering is the branch of engineering which involves the design, production and operation of machinery. It includes the application of various other disciplines such as engineering, physics, materials science and engineering mathematics to manufacture, analyze and maintain mechanical systems. It requires in-depth knowledge of areas such as thermodynamics, mechanics, structural analysis, dynamics and electricity. Mechanical engineering utilizes various tools like computer-aided design, product life cycle management and computer-aided manufacturing. This branch of engineering is used to design and analyze industrial equipment, manufacturing plants, heating and cooling systems, transport systems, robotics, aircraft, watercraft, and weapons. The topics included in this book on mechanical engineering are of utmost significance and bound to provide incredible insights to readers. Some of the diverse topics covered herein address the varied branches that fall under this category. This textbook will serve as a valuable source of reference for those interested in this field.

IIT Foundation series is specifically for students preparing for IIT right from school days. The series include books from class 8 to class 10th in physics, chemistry & mathematics.

Answers to the Questions of the textbook Candid Physics Prescribed by I.C.S.E. Board for class 9

This book provides a calculus-based perspective on classical mechanics and the theory of relativity. Unlike most conventional textbooks, the discussion on theory is pared down to a minimum in favor of detailed, guided solutions of problems illustrating salient points, subtleties and principles. By working through the 900 carefully selected problems, the serious learner will hence be stimulated, challenged and enlightened. Great emphasis

is placed on the pedagogical value of solving problems in a number of ways, on the careful and detailed analysis of problems, on dimensional considerations, and on basic principles underlying every topic treated. The book is aimed at first-year undergraduate students in physics and engineering. Advanced Placement students in high schools will also find this book rewarding and challenging. Instructors too will be able to recharge their

batteries and refresh their reservoir of problems for recitation classes, or delve into it for their own amusement and diffication.
