second edition provides business profiles, hiring and workplace culture information at more than 40 top employers, including Microsoft, Oracle, Dell, IBM, Cisco and more. How the computer became universal. Over the past fifty years, the computer has been transformed

from a hulking scientific supertool
and data processing workhorse,
remote from the experiences of
ordinary people, to a diverse family
of devices that billions rely on to
play games, shop, stream music
and movies, communicate, and
count their steps. In A New History

of Modern Computing, Thomas Haigh and Paul Ceruzzi trace these changes. A comprehensive reimagining of Ceruzzi's A History of Modern Computing, this new volume uses each chapter to recount one such transformation, describing how a particular

community of users and producers remade the computer into

something new. Haigh and Ceruzzi ground their accounts of these computing revolutions in the longer and deeper history of computing technology. They begin with the story of the 1945 ENIAC computer,

which introduced the vocabulary of
"programs" and "programming,"

smart phones, and our current
world of computers everywhere--in
phones, cars, appliances, watches,

This book presents a model of the leadership process that identifies which factors create an effective leader at different points in the

organisation's lifecycle and which forces act as moderators to that effectiveness. The dimension of how the dynamics of leadership play out over time is what distinguishes this work from previous books on leadership. This book reports on advanced

theories and cutting-edge applications in the field of soft computing. The individual chapters, written by leading researchers, are based on contributions presented during the 4th World Conference on Soft Computing, held May 25-27, 2014, in Berkeley. The book covers
