Learning Not Schooling: Reimagining the Purpose of Education examines how both the curiosity and the initiative of students in their formative years can be stimulated by partnering local schools with the world of adult work and professional expertise. This tactic addresses some of the issues that seem to continually plague us, such as how to help students learn more effectively in the modern age, or how to more fully address some of the perpetual inequities between different socioeconomic groupings. Drawing on his experiences from founding and directing a private school for students age six to fourteen, Lyn Lesch presents a new model for education in which learning for students increasingly occurs in the world of adult expertise, with classroom teachers taking on the role of conduits that not only prepare students to learn from professionals working in various fields but also assist them in absorbing the advanced information and knowledge they will be acquiring.

Manual of Small Animal Emergency and Critical Care Medicine,Second Edition presents essential information on commonemergencies in small animals using a concise, practical outlineformat. Offering a thorough update to this classic reference,the new edition provides new chapters on orthopedic injuries andwound management, significant revisions to the treatment protocols,and expanded toxicology information, as well as new references anddrug information. The book retains its logical division into twoparts, the first covering initial stabilization and the secondoffering a systems approach to specific conditions. As in the previous edition, chapters are extensively indexed andcross-referenced to facilitate ease of use in emergency situations.With many formulas, tables, drug dosages, and illustrations,Manual of Small Animal Emergency and Critical Care Medicineis an indispensable, convenient resource for busy emergencyclinicians, whether they are new graduates or seasonedprofessionals.

The Morphological Atlas of the Dutch Dialects (MAND) presents word formation in Dutch and Frisian dialects at the end of the twentieth century in two comprehensive volumes. Based on data acquired in the field between 1979 and 2000, this collaborative effort between linguists from the Netherlands and Belgium deals with the grades of comparison of adjectives, possessive pronouns, personal pronouns for subject and object, the endings of present- and past-tense strong and weak verbs, the participle prefix, and the stem form of strong verbs.

Based on the proceedings of a satellite symposium held in conjunction with the 9th World Congress of Gastroenterology, the aim of this volume is to present and discuss the latest data originating from leading laboratories in the field. The change in focus of current research to studies of chronic repair rather than acute responses, and deeper mucosal elements rather than surface phenomena, is apparent. Many of the chapters contain previously unpublished findings.

A multilingual, transnational literary tradition, Jewish American writing has long explored questions of personal identity and national boundaries. These questions can engage students in literature, writing, or religion; at Jewish, Christian, or secular schools; in or outside the United States. This volume takes an expansive view of Jewish American literature, beginning with writing from the earliest colonies in the Americas and continuing to contemporary Soviet-born authors in the United States, including works that engage deeply with religious concepts and others that embrace assimilation. It invites readers to rethink the nature of American multiculturalism, suggests pairings of Jewish American texts with other ethnic American literatures, and examines the workings of whiteness and privilege. Contributors offer varied perspectives on classic texts such as Yekl, Bread Givers, and Goodbye, Columbus, along with approaches to interdisciplinary topics including humor, graphic novels, and musical theater. The volume concludes with an extensive resources section.

Britain's public (that is, its major independent) schools have a conspicuous role in the country's social system, and as a result are the subject of a long-standing political debate. The discussion is generally founded on a stereotyped image of what these school may have been like in the 1950s – this books shows how they were in the late 1980s. It is based on fieldwork in two major public boarding schools which the author conducted over an extended period, and draws on interviews, observation and documentary sources to establish a picture of what public school life is actually like for pupils and staff. Since the schools were predominantly male preserves, the major part of the book describes the social world and experiences of boys and school-masters. An important section of the book, however, discusses the introduction of girl pupils, the experiences of female teachers and the way schoolmasters' wives tend to be drawn into their husbands' work. Geoffrey Walford's conclusions about life in public schools differ considerably from traditional expectations. At the same time he asks whether there really has been a 'public school revolution'. His book makes an important contribution to our knowledge of public schools, to debates in the sociology of education and to the issues of abolishing or extending the independent sector.

While ideology has been treated widely in CDA-literature, the role played by the interaction of text and image in multiplying meaning and furthering ideological stances has not so far received a lot of attention. Mediating Ideology in Text and Image offers a number of approaches to such analysis, offering students and academics valuable tools for identifying possible discrepancies between the world and the way it is represented through various mediational means. The authors' common aim is one of assisting the audience in reading between the lines, thus offering a variety of approaches that may contribute to a better understanding of how ideologies possibly work and how they may be denaturalised from text and image. The articles in part I look at rhetorical strategies used in meaning construction processes unfolding in various kinds of mass media. Part II focuses on the re-semiotization of meaning and looks at how analysing the combination of text and image may contribute to a better understanding of ideological processes brought about by multimodal resources. Foreword by Ruth Wodak.

Written as a technology guide for students, practitioners, and administrators, the focus of this book is on introducing current and future trends in library technology and automation within the larger context of strategic and systems planning, implementation, and continuous improvement. Technology is an essential resource for attaining both organizational and patron goals, and planning needs to emphasize the alignment between the clearly defined goals of each. For this alignment to occur on a consistent basis goals must be designed, or engineered, in a systematic fashion where technology fulfils the need to deliver the desired outcomes in an efficient, cost-effective manner. The concept of usability engineering is also examined, where the technology is planned, designed, and implemented in such a way as to maximize utility and ease-of-use for users and employees. Readers of this book will understand both the why and the how of library technology, planning, and implementation articulated in a simple, easy-to-understand fashion. Delivered from academic, public, and school library media perspectives Current and emerging technologies are discussed along with their current and future application in the field of library and information science Technology planning and integration is explained using a systems design process with scenarios and case studies that are articulated in a step-wise, holistic fashion

Written in recognition of developments in spatial data analysis that focused on differences between places, the first edition of Local Models for Spatial Analysis broke new ground with its focus on local modelling methods. Reflecting the continued growth and increased interest in this area, the second edition describes a wide range of methods which account for local variations in geographical properties. What's new in the Second Edition: Additional material on geographically-weighted statistics and local regression approaches A better overview of local models with reference to recent critical reviews about the subject area Expanded coverage of individual methods and connections between them Chapters have been restructured to clarify the distinction between global and local methods A new section in each chapter references key studies or other accounts that support the book Selected resources provided online to support learning An introduction to the methods and their underlying concepts, the book uses worked examples and case studies to demonstrate how the algorithms work their practical utility and range of application. It provides an overview of a range of different approaches that have been developed and employed within Geographical Information Science (GIScience). Starting with first principles, the author introduces users of GISystems to the principles and application of some widely used local models for the analysis of spatial data, including methods being developed and employed in geography and cognate disciplines. He discusses the relevant software packages that can aid their implementation and provides a summary list in Appendix A. Presenting examples from a variety of disciplines, the book demonstrates the importance of local models for all who make use of spatial data. Taking a problem driven approach, it provides extensive guidance on the selection and application of local models.

Laura Huang, an award-winning Harvard Business School professor, shows that success is about gaining an edge: that elusive quality that gives you an upper hand and attracts attention and support. Some people seem to naturally have it. Now, Huang teaches the rest of us how to create our own from the challenges and biases we think hold us back, and turning them to work in our favor. How do you find a competitive edge when the obstacles feel insurmountable? How do you get people to take you seriously when they're predisposed not to, and perhaps have already written you off? Laura Huang has come up against that problem many times--and so has anyone who's ever felt out of place or underestimated. Many of us sit back quietly, hoping that our hard work and effort will speak for itself. Or we try to force ourselves into the mold of who we think is "successful," stifling the creativity and charm that makes us unique and memorable. In Edge, Huang offers a different approach. She argues that success is rarely just about the quality of our ideas, credentials, and skills, or our effort. Instead, achieving success hinges on how well we shape others' perceptions--of our strengths, certainly, but also our flaws. It's about creating our own edge by confronting the factors that seem like shortcomings and turning them into assets that make others take notice. Huang draws from her groundbreaking research on entrepreneurial intuition, persuasion, and implicit decision-making, to impart her profound findings and share stories of previously-overlooked Olympians, assistants-turned-executives, and failing companies that made momentous turnarounds. Through her deeply-researched framework, Huang shows how we can turn weaknesses into strengths and create an edge in any situation. She explains how an entrepreneur scored a massive investment despite initially being disparaged for his foreign accent, and how a first-time political candidate overcame voters' doubts about his physical disabilities. Edge shows that success is about knowing who you are and using that knowledge unapologetically and strategically. This book will teach you how to find your unique edge and keep it sharp.

Law, Rights and Ideology in Russia: Landmarks in the destiny of a great power brings into sharp focus several key episodes in Russia's vividly ideological engagement with law and rights. Drawing on 30 years of experience of consultancy and teaching in many regions of Russia and on library research in Russian-language texts, Bill Bowring provides unique insights into people, events and ideas. The book starts with the surprising role of the Scottish Enlightenment in the origins of law as an academic discipline in Russia in the eighteenth century. The Great Reforms of Tsar Aleksandr II, abolishing serfdom in 1861 and introducing jury trial in 1864, are then examined and debated as genuine reforms or the response to a revolutionary situation. A new interpretation of the life and work of the Soviet legal theorist Yevgeniy Pashukanis leads to an analysis of the conflicted attitude of the USSR to international law and human rights, especially the right of peoples to self-determination. The complex history of autonomy in Tsarist and Soviet Russia is considered, alongside the collapse of the USSR in 1991. An examination of Russia's plunge into the European human rights system under Yeltsin is followed by the history of the death penalty in Russia. Finally, the secrets of the ideology of 'sovereignty' in the Putin era and their impact on law and rights are revealed. Throughout, the constant theme is the centuries long hegemonic struggle between Westernisers and Slavophiles, against the backdrop of the Messianism that proclaimed Russia to be the Third Rome, was revived in the mission of Soviet Russia to change the world and which has echoes in contemporary Eurasianism and the ideology of sovereignty.
