Excerpt from The Pathologist's Handbook: A Manual for the Post-Mortem Room Regular attendance in the post-mortem room is essential for a practical knowledge of disease. Morbid anatomy deals with facts. Theories as to the nature and cause of disease may come and go; experimental pathology may establish or dispel particular views but a study of morbid anatomy is essential to each generation of students, and should be as much a subject of personal inquiry to the senior student as normal anatomy is supposed to be to the junior. Seeing, with most, is not only believing, but remembering, and, to a considerable extent, doing. The atmosphere of the post mortem room whets the appetite for investigation into the problems of disease. The reports of the pathological department not only indicate what disease can accomplish, but explain clinical features, suggest lines of treatment, and oftentimes encourage a healthy and reasonable optimism by demonstrating the wonderful compensatory powers of the human nature. Encountering evidence of postmortem examinations - dissection or autopsy in historic skeletal collections is relatively rare, but recently there has been an increase in the number of reported instances. And much of what has been evaluated has been largely descriptive and historical. The Bioarchaeology of Dissection and Autopsy brings together in a single volume the skeletal evidence of postmortem examination in the United States. Ranging from the early colonial period to the early 1900's, from a coffeehouse at Colonial Williamsburg to a Quaker burial vault in lower Manhattan, the contributions to this volume demonstrate the interpretive significance of a historically and theoretically contextualized bioarchaeology. The authors employ a wide range of perspectives, demonstrating how bioarchaeological evidence can be used to address a wide range of themes including social identity and marginalization, racialization, the nature of the body and fragmentation, and the emergence of medical practice and authority in the United States.?
