Direct current machines are a quickly evolving domain whose applications affect many aspects of modern life from computers and printers to toys, electric vehicles, and traction applications. As their many uses continue to grow, it has become apparent that understanding these machines is the key to understanding our future. Operation, Construction, and Functionality of Direct Current Machines brings together many concepts, from the most basic working principles and construction of DC machines to more advanced topics such as electro-magnetism, armature reaction, parallel operations, and many more. Highlighting theoretical concepts and numerical problems, this book is an essential reference source for students, educators, and anyone interested in the field of electric machines.

An updated edition of the award-winning analysis of the role of race in the classroom features a new author introduction and framing essays by Herbert Kohl and Charles Payne, in an account that shares ideas about how teachers can function as "cultural transmitters" in contemporary schools and communicate more effectively to overcome race-related academic challenges. Young House Love

The hero of the story is a demonic lover -- dark, handsome, mysterious, and dangerously seductive. The heroine -- beautiful, and innocent -- willingly becomes his victim and is destroyed by him. This story of demon-lover and victim, always charged with passion, has been told over and over, from Greek mythology through contemporary fiction and films. Demon-Lovers and Their Victims in British Fiction is the first historical and structural exploration of the demon-lover motif, with emphasis on major works of British fiction from the eighteenth, nineteenth, and twentieth centuries; it will interest those concerned with gender role conflicts in literature and with the mutual influence of oral and written texts of folklore and formal literature.

In The Four Agreements, bestselling author don Miguel Ruiz reveals the source of self-limiting beliefs that rob us of joy and create needless suffering. Based on ancient Toltec wisdom, The Four Agreements offer a powerful code of conduct that can rapidly transform our lives to a new experience of freedom, true happiness, and love. • A New York Times bestseller for over a decade • Translated into 46 languages worldwide "This book by don Miguel Ruiz, simple yet so powerful, has made a tremendous difference in how I think and act in every encounter." — Oprah Winfrey "Don Miguel Ruiz's book is a roadmap to enlightenment and freedom." — Deepak Chopra, Author, The Seven Spiritual Laws of Success "An inspiring book with many great lessons." — Wayne Dyer, Author, Real Magic "In the tradition of Castaneda, Ruiz distills essential Toltec wisdom, expressing with clarity and impeccability what it means for men and women to live as peaceful warriors in the modern world." — Dan Millman, Author, Way of the Peaceful Warrior

This New York Times bestselling book is filled with hundreds of fun, deceptively simple, budget-friendly ideas for sprucing up your home. With two home renovations under their (tool) belts and millions of hits per month on their blog YoungHouseLove.com, Sherry and John Petersik are home-improvement enthusiasts primed to pass on a slew of projects, tricks, and techniques to do-it-yourselfers of all levels. Packed with 243 tips and ideas—both classic and unexpected—and more than 400 photographs and illustrations, this is a book that readers will return to again and again for the creative projects and easy-to-follow instructions in the relatable voice the Petersiks are known for. Learn to trick out a thrift-store mirror, spice up plain old roller shades, "hack" your Ikea table to create three distinct looks, and so much more.

David Vizard's How to Build Horsepower

Lexique thématique anglais-français vivant et moderne, New Words offre un vaste panorama de la langue

des médias sur des sujets à la fois actuels et traditionnels. Il comprend des mots et expressions propres à l'histoire des pays anglo-saxons ainsi que du vocabulaire spécialisé, scientifique et technique. Organisé en 40 dossiers thématiques, il propose du vocabulaire en contexte donnant ainsi la possibilité de choisir plus facilement le mot juste à l'oral ou à l'écrit et de fixer son emploi et son usage. Particulièrement complet, il s'adresse à tous ceux qui souhaitent élargir et enrichir leur vocabulaire que ce soit dans le cadre d'études supérieures, de la vie professionnelle ou par goût personnel. Il comprend : \* 250 chapitres dont les champs lexicaux couvrent tous les domaines de la vie et des activités humaines. \* des rubriques et sous-rubriques (ou sous-thèmes) proposant, en plus des mots traduits : des définitions en français et/ou en anglais pour mieux cerner le mot et son emploi ; des expressions ; des collocations indiquant l'emploi des mots en contexte ; des idiomes, des proverbes, des rubriques culturelles pour éclairer certaines notions et les replacer dans un contexte historique, une rubrique « food for thought » offrant quelques citations à la réflexion ainsi que quelques grandes questions de société abordées plus largement dans le cadre d'une présentation comprenant les arguments pour et contre. \* 1 toolbox regroupant : les faux amis, les équivalences entre l'anglais britannique et américain, les anglicismes, les mots utiles, les chiffres et les nombres, les verbes irréguliers, les proverbes courants, une liste de quelque 1 750 collocations... Fonctionnel et pédagogique, New Words dépasse le simple cadre du lexique en proposant à tout apprenant les outils pour nourrir l'inspiration, la réflexion et l'expression.

The power systems of space vehicles have undergone significant development during the previous decade, and will continue to do so in the immediate future. Until now, except for the scattered results of conferences and a few publications with sketchy coverage, no single volume has covered the entire spectrum of the subject. Spacecraft Power Systems addresses every facet of electrical power system design, analyses, and operation with a level of detail found nowhere else. The book delivers wide coverage of the fundamentals of energy conversion, energy storage, power conditioning, energy management, and operational aspects that help engineers maintain a leading edge in the design of various systems. This volume provides the most recent data and procedures for designing an electrical power system that meets mission requirements at a minimum of cost and weight. This book evolved from courses taught by the author and from the author's deep involvement in many design and development programs at the General Electric Space Division and at Lockheed Martin Space Systems.

***Extracting maximum torque and horsepower from engines is an art as well as a science. David Vizard is an engineer and more aptly an engine building artist who guides the reader through all the aspects of power production and high-performance engine building. His proven high-performance engine building methods and techniques are revealed in this all-new edition of How to Build Horsepower. Vizard goes into extreme depth and detail for drawing maximum performance from any automotive engine. The production of power is covered from the most logical point from the air entering the engine all the way to spent gasses leaving through the exhaust. Explained is how to optimize all the components in between, such as selecting heads for maximum flow or port heads for superior power output, ideal valvetrain components, realizing the ideal rocker arm ratios for a particular application, secrets for selecting the best cam, and giving unique insight into all facets of cam performance. In addition, he covers how to select and setup superchargers, nitrous oxide, ignition and other vital aspects of high-performance engine building.***

***Component replacement is often the most feasible solution to solve the problems associated with primary water stress corrosion cracking of Alloy 600. Even if mitigation and/or repair were a local solution, replacement offers many advantages when addressing the assortment of potentially susceptible parts contained in a major component. This publication focuses on heavy components replacement considered strategic for nuclear power plant life management but not included in current maintenance activities carried out by utilities. The major and heavy components to be considered are: steam generators for pressurized water reactors (PWRs) and pressurized heavy water reactors (PHWRs); reactor vessel heads for PWR plants; reactor internal components for boiling water reactor (BWR) plants; reactor vessel internals for PWR plants; pressurizers for PWR plants; reactor coolant piping/recirculation piping for PWR and BWR plants, and fuel channel and feeder pipes in PHWRs.--Publisher's description.***
