Getting Gold: A Gold-Mining Handbook for Practical Men

Present-Day Shipbuilding

The Steamship

While the design and service histories of warships are well covered in print, there is no single-volume guide to the companies and state yards that built them. This work is designed to fill the gap. The core of the book is made up of potted biographies of the shipbuilders, describing their corporate development, highlights in their histories, and listing the major ships they built. The book is international in coverage, divided by country, by region and by yard, with maps and plans showing the main areas, the locations of the yards, and the ground layout of the most important builders at significant dates in their history.

Handbook on Petroleum for Inspectors under the Petroleum Acts

**"Shipfitter's Manual" has been written primarily for the benefit
of student shipfitters who at the very outset of their training
period realize a dire need for some suitable guide in their
study of the trade. Its purpose is to provide the groundwork
upon which a student may build for him-self a complete and
thorough knowledge of Shipfitting by practical application of
its contents. The finest book, course of instruction or staif of
instructors in shipfitting can do no more than merely provide
the necessary foundation for learning; the true development of
a Shipfitter rests entirely with the student through individual
resourcefulness, courage and initiative in solving the various
trade problems that may arise and the ability to co-ordinate
trade studies with practical trade experience.**

Excerpt from Present-Day Shipbuilding: A Manual for Students and Ships' Officers for Their Respective Examinations; Ship-Superintendents, Surveyors, Engineers, Shipowners, and Shipbuilders; Being Chapter III., IV., VI., VII. Of "Steel Ships," Revised, Enlarged, and Specially Arranged, With Tes The present volume is, in a large measure, the outcome of the gratifying reception with which the smaller work, "Know your Own Ship," published in the Nautical Series, met on its first and subsequent editions. The success of that book emboldened its Author to embark, at the suggestion of the publishers, upon the preparation of a larger and more important undertaking, the result of which is now presented to the reader in the hope that it will be found, not less than the former work, to merit the approval of that section of the shipbuilding world for whose needs it has been specially devised. A sketch of the plan of the book will be found at the end of this preface; it is therefore unnecessary here to do more than briefly outline the circumstances under which it has been written. The work has taken four years to complete, the Author having been unable to devote more than his leisure hours to its composition. A careful study of some years' duration, carried out in that centre of the steel trade, the

Cleveland district, has afforded the necessary basis for the first two chapters, while the subsequent chapters are the result of the Author's daily experience in the profession of ship construction and maintenance. The book has been copiously illustrated, and no expense has been spared in the preparation and execution of diagrams intended to amplify and elucidate the text. These have been placed in close juxtaposition to those portions of the work to which they refer, the Author conceiving that they will thus prove more readily available for purposes of reference than if they had been published as a separate volume, as is sometimes done in works of this class. The whole subject has been treated from a practical point of view, and the requirements of students, ship superintendents, shipbuilders, and marine engineers have been carefully studied. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Excerpt from A Handbook of Practical Shipbuilding: With a Glossary of Terms This handbook on the practical construction of a modern standard cargo steamer has been written in answer to some of the

many questions which from time to time have been asked by men who have been working under the supervision of the writer, and is intended to fill the need for a guide to the new men starting in ship yard work. During many years' experience in shipyards on all types of marine construction from the smallest of torpedo boats of years ago to the mighty war vessels and merchant ships of to-day the writer has been associated with the men who are to-day supervising the wonderful ship building program on which this country is engaged, and he has endeavored to embody the results of this more than twenty years' experience in the book. In the present struggle on land and sea, when every one must use all his might, this manual of the necessary steps in fabricating and assembling of vessels has been prepared with the hope that it will prove a help to some of the many thousand men who must come into this industry from other trades.
