

## ***Prevention Of Water Pollution How To Control Reduce And***

Water pollution is the contamination of water as a result of human activities. It is primarily caused by the discharge of inadequately treated wastewater into natural water streams leading to environmental degradation and impacts on public health. Other effects include eutrophication, acidity, anoxia, etc. Common contaminants contributing to water pollution include chemicals and pathogens. Water pollution can be classified as surface water, groundwater and marine

pollution. The measurement of water pollution is done by analyzing water samples with a variety of physical, chemical and biological tests. Prevention of pollution can be achieved by the adoption of appropriate sewage and industrial treatments, control of urban runoff, agricultural wastewater management, erosion and sediment control, etc. This book provides comprehensive insights into the field of water pollution. It discusses some existing theories and innovative concepts revolving around water pollution, its treatment and mitigation strategies. This book is a vital tool for all researching and studying this field.

The protection of water resources from deterioration in

quality by pollution discharges is probably the biggest challenge in sustainable water resources management in the recent decades. In practice, most countries have adopted pollution control strategies and measures which are based on 'end-of-pipe' solutions: wastewater treatment plants and adjustments to the regulations, including taxes for wastewater discharges (Conventional Strategy). Although this approach involves very high costs, on many occasions, this strategy has been a complete failure. The research described in this book contribute to the development of sustainable solutions for the previously outlined problem. It was based on the validation of the Three-Step Strategic Approach concept

(3-SSA), which includes: 1) prevention or minimisation of waste production; 2) treatment aimed at recovery and reuse of waste components, and 3) disposal of remaining waste with stimulation of natural self-purification of the receiving water body. The study showed overall positive effects of the 3-SSA, in comparison of Conventional Strategy, on wastewater management in the Upper Basin (389 km) of the Cauca river, the second most important river in Colombia. The Cost Benefit Analysis clearly favoured the 3-SSA, generating a major impact on the river water quality at lower cost compared to the Conventional Strategy.

studies in the field of water pollution.

More specifically, this book examines the causes and effects of this threatening phenomenon and identifies the preventive measures that can be taken to contain, and even to defeat, water pollution worldwide.

The papers gathered in this volume pinpoint the need to implement greener water treatments to prevent water pollution from impacting ecosystems, human well-being and economies any further. They also successfully outline the processes that have been studied, optimized and

laws passed by Congress. The EPA's struggle to protect health and the environment is seen through each of its official publications. These publications outline new policies, detail problems with enforcing laws, document the need for new legislation, and describe new tactics to use to solve these issues. This collection of publications ranges from historic documents to reports released in the new millennium, and features works like: Bicycle for a Better Environment, Health Effects of Increasing Sulfur Oxides Emissions Draft, and Women and Environmental Health.
