Do you want to create .NET applications that provide high performance and scalability? Do you want to employ object-oriented programming techniques in a distributed environment? Do you want to maximize the reuse and maintainability of your code? Then this book is for you. In Rockford Lhotka's Expert C# 2008 Business Objects, you'll learn how to use advanced .NET Framework capabilities alongside object-oriented design and programming to create scalable, maintainable object-oriented applications. Better still, this book includes Component-based Scalable Logical Architecture (CSLA) .NET 3.6, a widely-used framework on which you can base your application development. By using the concepts and framework in the book, you can focus more on your business issues and less on technology. Using VS 2008 and C# 3.0, Rockford Lhotka shows you how CSLA .NET 3.6 allows great flexibility in object persistence, so business objects can use virtually any data sources available. The CSLA framework supports 1-, 2- and n-tier models through the concept of mobile objects. This provides the flexibility to optimize performance, scalability, security, and fault tolerance with no changes to code in the UI or business objects. Business objects based on CSLA.NET 3.6 automatically gain many advanced features that simplify the creation of Windows forms, web forms, WPF, WCF, WF, and web services interfaces, and LINQ.

A BASIC GUIDE TO THE CHALLENGES OF MOVING TO THE CLOUD FOR BUSINESS PROFESSIONALS
This book is not another Cloud Security Theory book, it is a practical and how-to volume for both the Cloud Service Customer (CSC) and Cloud Service Provider (CSP) negotiate the Cloud Service Level Agreement (CSLA) based on defined terms and metrics. This is more than a high-level description of "risks and challenges" involved in entering into a true CSLA. It is a "down in the weeds" approach with nearly 100 specific Service Level Objectives (SLO)--the next level down--with suggested metrics that get you started on Day 1. In this book we explore some of the challenges and possibilities of using a cloud solution to fortify and protect your critical data and Intellectual Property. Mr Russo has over 20 years in DOD in the areas of Program Management, Cybersecurity, Intelligence, and System Engineering. He makes the seemingly complex easy to understand as he walks you (and your IT staff) through developing, creating, and understanding what a good CSLA looks like. He provides a detailed checklist with numerous example to draw from. The objective is to give you, your company or agency a good start-point to take on the challenges of THE CLOUD.
