

Previous Matric Exam Papers

This title seeks to provide a reflection on the transformation of South Africa's education system. It traces the rationale behind various acts and policies, takes a critical look at the realities of implementation and offers projections regarding possible future directions. Fraud and Education gives an informative overview of cheating in examinations in the U.S. and foreign countries and of the current state of fraud in education and research. It differs however, from many popular treatises on the same subject, in that it is not intended as a blanket condemnation of American (or foreign) education. Instead of assigning blame for the prevalence of fraud, the authors point to such factors as growth in the number of persons engaged in education and research, pressures on individuals to succeed, improvements in communications (especially the Internet and e-mail), and in techniques of document reproduction.

Competition Science Vision (monthly magazine) is published by Pratiyogita Darpan Group in India and is one of the best Science monthly magazines available for medical entrance examination students in India. Well-qualified professionals of Physics, Chemistry, Zoology and Botany make contributions to this magazine and craft it with focus on providing complete and to-the-point study material for aspiring candidates. The magazine covers General Knowledge, Science and Technology news, Interviews of toppers of examinations, study material of Physics, Chemistry, Zoology and Botany with model papers, reasoning test questions, facts, quiz contest, general awareness and mental ability test in every monthly issue.

What will you do... When a beautiful, pleasant and promising morning suddenly turns into the most horrible day? When a wonderful dream is gradually dragging on to become a mirage? When death holds you hostage in between, neither carries you away nor leaves you alive? When the only hope becomes hop? If true fame can neither be measured by how many millions one has nor in how many investment and achievements accomplished, then what can we use for its evaluation? Johnny's decision to become famous by all means in order to exact revenge for the humiliation he suffered on the commemoration of the new Freedom Day celebration under the first ever black elected president of South Africa, Nelson Rolihlala Mandela, in 1995, is short-lived by happiness, a close encounter with death. Being dead for 20 years, yet he believed one can even fight death! How?

The Journal of Education

The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use the indicator of student achievement. The matriculation examination is the visible, high profile and public performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real or have they been manipulated? How is our education system doing? Are we meeting the development goals? What should the matriculation examination of the future look like? participants from government (national and provincial),

Mobile Technologies and Handheld Devices for Ubiquitous Learning: Research and Pedagogy provides readers with a rich collection of research-informed ideas for integrating mobile technologies into learning and teaching. Each chapter looks critically at the issues, related benefits and limitations of learning ubiquitously within the context of the research reported. New and emerging technologies present challenges for education causing educators to have to rethink pedagogy, boundaries and curriculum if they continue to embrace mobile technologies in their teaching.

The argumentative point of departure of this scholarly book is the common conviction of specialists in the field of education in South Africa that the national education system is not at a satisfactory level - in both the academic and the public discourse. Such allegations are made and, frequently, stronger adjectives than 'non-satisfactory' are used. Results of international test series in which South Africa has participated, such as the 2015 TIMSS tests, confirm the negative verdicts found in the (public and scholarly) discourse. This book aims to argue that although the lack of performance could be attributed to a multiplicity of factors, one factor that can make a difference in the achievement levels obtained by learners in schools is leadership. The book demonstrates that a particular problem of both the scholarly and the public discourse on education in South Africa is an overtone of defeatism or resignation, blaming all ills in the education system and educational institutions on historical legacies and/or contextual factors (such as socio-economic deprivation in the catchment areas of schools) or poor resources and infrastructure. This collected work was inspired by a recently published spate of articles on top-performing schools (including top-performing schools in rural communities), in which it was demonstrated that good leadership can overcome such contextual and other challenges. The book unpacks the issue of leadership in South African schools from a variety of perspectives, thus contributing to the development of the scholarly discourse on Educational Leadership in South Africa. The target audience of the book is scholars of Educational Leadership. The research reported in the chapters draw on a wide range of methodologies, including empirical (survey) research (questionnaires and interviews), critical literature surveys, and the comparative method.

Memoir of a village boy who plucked his science dream from the sky.

An in-depth look at the changing sociolinguistic dynamics that have influenced South African society. To date, there has been no published textbook which takes into account changing sociolinguistic dynamics that have influenced South African society. Multilingualism and Intercultural Communication breaks new ground in this arena. The scope of this book ranges from macro-sociolinguistic questions pertaining to language policies and their implementation (or non-implementation) to micro-sociolinguistic observations of actual language-use in verbal interaction, mainly in multilingual contexts of Higher Education (HE). There is a gradual move for the study of language and culture to be taught in the context of (professional) disciplines in which they would be used, for example, Journalism and African languages, Education and African languages, etc. The book caters for this growing market. Because of its multilingual nature, it caters to English and Afrikaans language speakers, as well as the Sotho and Nguni language groups _ the largest languages in South Africa [and also increasingly used in the context of South African Higher Education]. It brings together various inter-linked disciplines such as Sociolinguistics and Applied Language Studies, Media Studies and Journalism, History and Education, Social and Natural Sciences, Law, Human Language Technology, Music, Intercultural Communication and Literary Studies. The unique cross-cutting disciplinary features of the book will make it a must-have for twenty-first century South African students and scholars and those interested in applied language issues.

Coming from a modest background in the dusty streets of Gugulethu, Dr Mbava gives an inspiring account of how through hard work and perseverance she rose above her circumstances and chose to live a life without limits. Her schooling journey in the turbulent and politically fraught last dying decade of apartheid in South Africa, miraculously took an astounding turn when she was a top matric student and found herself as a freshman at an elite liberal arts college for women in New England, Massachusetts on the other side of the world. This book, part of a short story collection on her intellectual journey, will inspire many to leverage opportunities that are within reach and most of all to rise above perceived limitations. Ultimately our destinies are the results of our choices given our circumstances

AIMING FOR THE STARS is a memoir of Dr Sphumelele Ndlovu and his life of hardship, which led him to becoming a Scientist. His mother sold chickens to provide for her children, never considering himself worse off than others. The family was poor. Sphumelele's life was also derailed when strikes caused 24 out of the 28 teachers at his school to abandon their posts in his matric year. Education was Ndlovu's ticket to a better future, and he knew at a young age, that he wasn't going to give it up without a fight. Ndlovu's PhD placed him to be part of a team of scientists set out to measure the distance between the Earth and Moon using lasers. It is the sixth-ever such venture, but the first to be carried out by an African team. A man whose horizon was once confined to the perimeter of a chicken coop now handled tools that allowed his eyes to glide over galaxies.
