"A mystery writer finds solace and murder in rural Oregon...Whimsy meets woodsy"— Kirkus Reviews Don't miss the first book in a brand-new gripping and hilarious bookish cozy mystery series by author Tamara Berry! Bestselling thriller writer Tess Harrow is almost at the end of her rope when she arrives with her teenage daughter at her grandfather's rustic cabin in the woods. She hopes this will be a time for them to heal and bond after Tess's recent divorce, but they've barely made it through the door when an explosion shakes the cabin. Suddenly it's raining fish guts and...is that a human arm? Tess was hardly convincing Gertie that a summer without Wi-Fi and running water would be an adventure. Now she's thrust into a murder investigation, neighbors are saying they've spotted Bigfoot in the woods near her cabin, and the local sheriff is the spitting image of her character Detective Gabriel Gonzales—something he's less than thrilled about. With so much more than her daughter's summer plans at stake, it's up to Tess to solve this case before anyone else gets hurt. Put your sleuthing hat on—Buried in a Good Book features: A thriller writer who knows way more than anyone should about death and dismemberment Her young daughter who's more intrigued by dead bodies than she probably should be An isolated cabin in the woods that's probably—definitely—hiding something The tiny mountain town that seems less than troubled by a sudden abundance of murders

These lecture notes on human metabolism are intended for classroom teaching at the advanced undergraduate level. They should also be suitable for self-study if the reader is familiar with basic biochemical concepts, such as those taught in first or second year undergraduate courses. While these notes focus on metabolic pathways and biochemical mechanisms, they also relate these to medical problems, such as for example the pathogenesis of diabetes and of atherosclerosis. They should thus be of interest to students and readers from medicine and health sciences.

At once intimate and epic, The Orchardist is historical fiction at its best, in the grand literary tradition of William Faulkner, Marilynne Robinson, Michael Ondaatje, Annie Proulx, and Toni Morrison. In her stunningly original and haunting debut novel, Amanda Coplin evokes a powerful sense of place, mixing tenderness and violence as she spins an engrossing tale of a solitary orchardist who provides shelter to two runaway teenage girls in the untamed American West, and the dramatic consequences of his actions.

A classic work of American literature that has not stopped changing minds and lives since it burst onto the literary scene, *The Things They Carried* is a ground-breaking meditation on war, memory, imagination, and the redemptive power of storytelling.

The Things They Carried depicts the men of Alpha Company: Jimmy Cross, Henry Dobbins, Rat Kiley, Mitchell Sanders, Norman Bowker, Kiowa, and the character Tim O'Brien, who has survived his tour in Vietnam to become a father and writer at the age of forty-three. Taught everywhere—from high school classrooms to graduate seminars in creative writing—it has become required reading for any American and continues to challenge readers in their perceptions of fact and fiction, war and peace, courage and fear and longing. The Things They Carried won France's prestigious Prix du Meilleur Livre Etranger and the Chicago Tribune Heartland Prize; it was also a finalist for the Pulitzer Prize and the National Book Critics Circle Award.

The second book by an up-and-coming poet whose poetry has garnered impressive critical acclaim.

In early 1997, a man named Mel Waters called into a late-night syndicated radio show to make the claim that he had an "endless hole" on his property in the mountains of Eastern Washington that measured more than 80,000 feet deep. That phone call would lead to a wild turn of events that saw the government get involved, money change hands, and eventually something much more sinister occur. Did Mel discover the fate of our species? Or was it just a tall tale with a bizarre string of coincidences to back it up? Author Christopher Hayden digs into the mystery in this novel that covers the phone calls, details, misconceptions, and theories of Mel's Hole.

More and more young people are learning about science, technology, engineering, and mathematics (STEM) in a wide variety of afterschool, summer, and informal programs. At the same time, there has been increasing awareness of the value of such programs in sparking, sustaining, and extending interest in and understanding of STEM. To help policy makers, funders and education leaders in both school and out-of-school settings make informed decisions about how to best leverage the educational and learning resources in their community, this report identifies features of productive STEM programs in out-of-school settings. Identifying and Supporting Productive STEM Programs in Out-of-School Settings draws from a wide range of research traditions to illustrate that interest in STEM and deep STEM

learning develop across time and settings. The report provides guidance on how to evaluate and sustain programs. This report is a resource for local, state, and federal policy makers seeking to broaden access to multiple, high-quality STEM learning opportunities in their community.

Follow the leader. Math for Meds has helped nearly one million nurses and other health care professionals become safe practitioners of dosage calculations. This classic resource continues to blaze the trail into a ninth edition, with its ratio and proportion method and building-block organization. Hundreds of full-color images of drug labels, syringes, and equipment complement the range of calculation competencies - from reading medication labels to calculating flow rates for heparin infusion. The straightforward language has also been retained, as the ninth edition preserves the tradition of making the complex understandable.

"No one who enjoys mystery can fail to savor this study of a classic case of detection."

—TONY HILLERMAN On the night of September 14, 1935, George Conniff, a town marshal in Pend Oreille County in the state of Washington, was shot to death. A lawman had been killed, yet there seemed to be no uproar, no major investigation. No suspect was brought to trial. More than fifty years later, the sheriff of Pend Oreille County, Tony Bamonte, in pursuit of both justice and a master's degree in history, dug into the files of the Conniff case—by then the oldest open murder case in the United States. Gradually, what started out as an intellectual exercise became an obsession, as Bamonte asked questions that unfolded layer upon layer of unsavory detail. In Timothy Egan's vivid account, which reads like a thriller, we follow Bamonte as his investigation plunges him back in time to the Depression era of rampant black-market crime and police corruption. We see how the suppressed reports he uncovers and the ambiguous answers his questions evoke lead him to the murder weapon—missing for half a century—and then to the man, an ex-cop, he is convinced was the murderer. Bamonte himself—a logger's son and a Vietnam veteran—had joined the Spokane police force in the late 1960s, a time when increasingly enlightened and educated police departments across the country were shaking off the "dirty cop" stigma. But as he got closer to actually solving the crime, questioning elderly retired members of the force, he found himself more and

more isolated, shut out by tight-lipped hostility, and made dramatically aware of the fraternal sin he had committed—breaking the blue code. Breaking Blue is a gripping story of cop against cop. But it also describes a collision between two generations of lawmen and two very different moments in our nation's history.

The Japan Association of Simulation & Gaming (JASAG) and the Science Council of Japan (SCJ) hosted ISAGA 2003, the 34th annual conference of the International Simulation and Gaming Association (ISAGA), at Kazusa Akademia Park in Kisarazu, Japan, August 25–29, 2003. About 450 participants and guests attended, with 330 from Japan and 101 from 34 other countries. The number of submitted papers and reports exceeded 210, and in addition, many poster presentations and experiential sessions were held. This book is made up of 30 papers submitted to ISAGA 2003 and provides a good example of the diverse scope and standard of research achieved in simulation and gaming today. The theme of ISAGA 2003 was "Social Contributions and Responsibilities of Simulation and Gaming." Looking back over the history of simulation and gaming research in Japan, in 1991 JASAG hosted ISAGA 1991 in Kyoto. However, even though there were only 12 years between ISAGA 1991 and ISAGA 2003, and both conferences were held in the same country, Japan, for Japanese researchers, the meaning of hosting these two international conferences of simulation and gaming research was very different.
