Requirements

engineering is the process by which the requirements for software systems are gathered, analyzed, documented, and managed throughout their complete lifecycle. Traditionally

## Get Free Problem Solution Paper

it has been concerned with technical goals for, functions of, and constraints on software systems.

Aurum and Wohlin, however, argue that it is no longer appropriate for software systems professionals to focus only on functional and non-functional aspects of the

intended system and to somehow assume that organizational context and needs are outside their remit.

Instead, they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders, processes, and software systems,
