L'assistenza infermieristica sta sempre più delineando i propri confini all'interno del processo di cura del paziente. La necessità di legare l'olismo dell'assistenza infermieristica, alla specificità di un contesto come quello dell'area critica, ed in particolare quello dell'area critica pediatrica, è da identificare come la chiave di lettura del presente libro. Tuttavia, il manuale nasce con lo scopo di supportare la pratica clinica e la formazione degli infermieri che vogliono operare in area critica pediatrica. Oltre a basarsi sulle più importanti evidenze scientifiche, il testo propone dei riferimenti ad alcune procedure specifiche dell' Ospedale Pediatrico Bambino Gesù. All'interno dei 21 capitoli è possibile navigare tra le problematiche più comuni in pediatria e sulla loro gestione infermieristica nelle tre principali aree che caratterizzano il contesto di un Dipartimento Emergenza Accettazione: Pronto Soccorso, Osservazione Breve, Area Intensiva. Per ogni condizione clinica esposta, oltre alle procedure infermieristiche di riferimento, verranno forniti alcuni cenni sull'epidemiologia, sulla fisiopatologia e sullo specifico trattamento. Il presente testo va interpretato come una guida rapida che sintetizza i concetti generali e li riorganizza in maniera sistematica ad uso e consumo dei professionisti infermieri e per la formazione universitaria circa il contesto dell'emergenza pediatrica.

Evil is not confined to war or to circumstances in which people are acting under extreme duress. Today it more frequently reveals itself in the everyday insensitivity to the suffering of others, in the inability or refusal to understand them and in the casual turning away of one's ethical gaze. Evil and moral blindness lurk in what we take as normality and in the trivial, not just in the abnormal and exceptional cases. The distinctive kind of moral blindness that characterizes our societies is brilliantly analysed by Zygmunt Bauman and Leonidas Donskis through the concept of adiaphora: the placing of certain acts or categories of human beings outside of the universe of moral obligations and evaluations. Adiaphora implies an attitude happening in the world – a moral numbness. In a life where rhythms are dictated by ratings wars and box-office returns, where people are preoccupied with the latest gadgets and forms of gossip, in our 'hurried life' where attention rarely has time to settle on any issue of importance, we are at serious risk of losing our sensitivity to the plight of the other. Only ce

be noticed in a society stuffed with sensational, valueless information. This probing inquiry into the fate of our moral sensibilities will be of great interest to anyone concerned with the most profound changes that are silently shaping the lives of everyone in our contemporary liquid-modern world.

by A. Berthoz The publication of this volume, edited by Adriano Ferrari and Giovanni Cioni, is a major event for several reasons. Most importantly, it concerns an area of child pathology that has yet to be fully explored. In this context, the authors' efforts to compile their observations as well as those of other clinicians and to elaborate their theories have resulted in an essential step in the field of cerebral palsy (CP). The originality of the book is its very clear focus, while at the same time the authors have encouraged the book's contributors to express their ideas and personal opinions. This leads sometimes to redundancy, but this is precisely one of the benefits of the book - cause the same problems are then exposed from different points of views. The reader is thus spared the normative attempts of many other pathology books, in which the complexity of a given disease is hidden by the authors' or editors' desire to impose a rigid taxonomy or epidemiology.

Venous access devices are necessary for any patient requiring repeated blood sampling, parenteral nutrition, chemotherapy, antibiotic therapy or other IV treatments to be delivered in the hospital setting or at home. In the last decade, ultrasound-guided PICCs and Midline catheters - inserted by adequately trained physicians or nurses - have suddenly and widely spread in the field of venous access devices all over the world. The introduction and diffusion of PICCs in Italy has been historically linked to the GAVeCeLT association (the Italian Group of Long Term Venous Access Devices) and particularly to the authors' scientific and didactic activity. This volume examines the clinical indications for these devices and illustrates the details of their insertion and management in several clinical settings. Furthermore, all the specifications regarding the materials to use and all the aspects related to device removal and replacement, as well as the different strategies for complications prevention, are thoroughly discussed.
