Few resources exist for those interested in developing their professional competence vis-a-vis ethics in forensic psychology, with the most recent text being published more than a decade ago. However, forensic psychology is changing quickly and there is a need for a current guide on ethics within the field. The Ethical Practice of Forensic Psychology highlights the ethical standards and guidelines set forth by the American Psychological Association's (APA) Ethical Principles of Psychologists and Code of Conduct (EPPCC) and the Specialty Guidelines for Forensic Psychology (SGFP). This Casebook provides readers with a practical review of these ethical standards and professional guidelines in the context of forensic case vignettes with corresponding commentary by leaders in the field. Concepts are presented using a best-practices model that encourages and promotes engaging in empirically supported decision-making. This volume is distinct from all others published in this area, given its inclusion and integration of a review of the ethical standards and guidelines contained in the EPPCC and SGFP, in addition to numerous types of ethical dilemmas encountered in forensic practice, a review of the relevant empirical literature and case law/legal statutes, and commentary by experts in forensic psychology. This unique Casebook will prove useful for a broad audience including academics in forensic psychology, psychology graduate and post-graduate students and trainees, practitioners, mental health counselors, social workers, and legal professionals. This ground-breaking collection dares to take the next step in the advancement of an autonomous, inter-disciplinary restorative justice field of study. It brings together criminology, social psychology, legal theory, neuroscience, affect-script psychology, sociology, forensic mental health, political sciences, psychology and positive psychology to articulate for the first time a psychological concept of restorative justice. To this end, the book studies the power structures of the restorative justice movement, the very psychology, motivations and emotions of the practitioners who implement it as well as the drivers of its theoreticians and researchers. Furthermore, it examines the strengths and weakness of our own societies and the communities that are called to participate as parties in restorative justice. Their own biases, hunger for power and control, fears and hopes are investigated. The psychology and dynamics between those it aims to reach as well as those who are funding it, including policy makers and politicians, are looked into. All these questions lead to creating an understanding of the psychology of restorative justice. The book is essential reading for academics, researchers, policymakers, practitioners and campaigners.

The second edition enables psychologists to gain a better understanding of what is unique and intriguing about this area of study. It follows a groundbreaking visual approach that helps them quickly and easily learn the subject. With numerous illustrations and graphics, the book brings complex concepts to life. The links between theory and application are also clearly presented. Psychologists will benefit from this visually-oriented look into the field because it's more engaging than other resources.

This work begins with a discussion of problems of method and then surveys a number of areas of psychological research to reach an initial idea of the psychological resources and liabilities which people typically have. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCampus website.
