"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. Comprehensive coverage of leading theoretical and empirical advances in developmental psychology emphasises the importance of psychological theory to developmental aspects of human behaviour. The use of several interactive and applied components such as end of chapter contexts of development, quick think questions and focus boxes encourages students to think more deeply about the topics they are covering." - product description.

"As disciplines, psychology and theology share an overlapping interest in the nature and functioning of human beings. This book provides an introduction to many of the world-view issues and philosophical foundations that frame the relationship of psychology and theology, includes scholarly reflection on the integration literature, and surveys five paradigms of possible relationships between psychology and Christianity. Questions at the end of each chapter are included to help readers evaluate both the material and their own burgeoning approach to integration. This book is ideal as a textbook for students of psychology and other behavioral and social sciences (social work, sociology, theology, counseling, pastoral counseling) at both the graduate and undergraduate level. It is also written for the broader readership of psychologists, counselors, pastors, and others who are interested in integration"--Publisher description.
