This book offers a novel approach to thinking about public policy and a distinctive methodology for analysing policy. It introduces a set of six questions that probe how 'problems' are represented in policies, followed by an injunction to apply the questions to one's own policy proposals. This

form of analysis, it suggests, is crucial to understanding how policy works, how we are governed, and how the practice of policy-making implicitly constitutes us as subjects. The book mounts a challenge to the problem-solving paradigm currently dominating the intellectual and policy landscape, a paradigm manifest in 'evidence-based policy'. Arguing that such a paradigm denies the shaping that

*When children were asked, "What is the worst thing about being in a kindergarten?" the unanimous answer was: "To be scolded by the adults!" No one, including adults, enjoys being scolded by other people; it is both painful and humiliating. And yet scolding is regarded as something natural, and even inevitable, in the everyday life of young children. Why is this so? In his landmark study, originally published in Danish, Erik Sigsgaard took up the issue to wide acclaim and enthusiastic reviews. Translated here for the first time, *Scolding: Why It Hurts More Than It Helps* is as relevant to U.S. childcare policy and practice as it is to Danish. It is about formulating a vocabulary to express the deepest kind of pain. And it's about finding a way to write about a reality invaded by grief, lessened by loss. Faced with the sudden emptiness of language, Naja finds solace in the anguish of Joan Didion, Nick Cave, C.S. Lewis, Mallarmé, Plato and other writers who have suffered the deadening impact of loss. torment suffuses with her own as Naja wrestles with words and contests their capacity to speak for the depths of her sorrow. This palimpsest of mourning enables Naja to turn over the pathetic, precious transience of existence and articulates her greatest fear: to forget. The insistent compulsion to reconstruct the harrowing aftermath of Carl's death keeps him painfully present, while fragmented memories, journal entries and poetry inch her closer to piecing Carl's life together. Motivation addresses a central problem in psychology: Why does an animal's behavior fluctuate in the face of an unaltered environment? In a sense this is the opposite of the question from which work on motivation began, and for which Claude Bernard invented the concept of the fixity of the internal milieu: How does an animal maintain constancy in the face of a fluctuating environment? Dealing with motivation has become extremely complex as new

experiments, phenomena, and theories have extended the concept. This book embodies some of the ways in which work on motivation is currently proceeding. One of the major changes has been the recognition that motivation cannot be explained without an understanding of the biological rhythms and activational systems that underlie behavior. Another is that ecological and evolutionary perspectives add enormously to answering the central problem of why an animal does what it does when it does. The book suffers from several omissions. There is no

chapter on the development of motivated behavior. There is none on reward systems in the brain, owing to the untimely death of James Olds, whose contribution would have enriched this book appreciably, and to whom we dedicate it. EVELYN SATINOFF PHILIP TEITELBAUM

Living and Dying at Murray Manor is a classic text that documents how the "work" of everyday life in a nursing home is accomplished. Jaber F. Gubrium spent several months at a nursing home as a participant-observer, involved in activities ranging from performing menial "toileting" work to serving as a gerontologist at staff meetings. The result is not a

survey of statistics about nursing homes but an examination of the social organization of care in a single home the author calls Murray Manor. Gubrium's research reveals how staff, clientele, relatives, visiting physicians, and funeral directors negotiated their respective roles, needs, and goals- and how, in the end, Murray Manor emerged as an organized social entity.

Most books on this subject describe educational and behavioural therapies, but autism is a medical disease, not a psychological disorder. This groundbreaking book shows that the disease can be treated by reducing the neurological inflammation that is part of the disease process, rather than simply masking the symptoms with drugs like Ritalin and Prozac. The authors have seen autistic behaviours improve dramatically or disappear completely with appropriate medical treatment. The book reviews the medical literature
