"The BIM Handbook presents the technology and processes behind BIM and how architects, engineers, contractors and sub-contractors, construction and facility owners (AECO) can take advantage of the new technology and work process. Unlike CAD, BIM is a major paradigm shift in the documentation, work processes and exchange of project information. It facilitates collaboration and further automation, in both design and construction. AEC professionals need a handbook to guide them through the various BIM technologies and related processes. The collaborative nature of BIM requires professionals to view BIM from various industry perspectives and understand how BIM supports multiple project participants. The BIM Handbook reviews BIM processes and tools from multiple perspectives: the owner, architects and engineers, contractors, subcontractors and fabricators"--

In today's dynamic world, technology and innovation are of extreme importance for many organizations and for the advancement of society as a whole. In the past decades, firms have faced grand challenges of fast-changing innovation environments, shortening product life cycles and increased global competition. Especially those firms that seek to establish and maintain a competitive advantage by following an innovation-related strategy have been pressured to ensure an effective and efficient innovation process. However, a centralized R&D configuration with one large in-house domestic location was in many ways no longer sufficient in achieving this. Instead, firms have increasingly crossed country boundaries, have opened up their organizational boundaries, or have done so simultaneously, while there are first insights on the performance implications of crossing country and organizational boundaries, further research is needed to understand better how firms can effectively manage boundary-crossing activities. This is where this thesis sets in. Despite the heterogeneity in methods and specific research questions, all thesis chapters focus on the related general question: How can firms increase their innovation performance through boundary-crossing activities? The thesis implies that through strategically opening up the R&D system and crossing organizational and country boundaries, firms can build and maintain a competitive advantage. However, managers need to assess whether their firm is especially vulnerable to potential downsides of crossing boundaries. Based on this thesis, the assessment can build on three major aspects: First, the specific characteristics of the firm. Second, its management practices. And third, the potential effects on the firm's employees.

Invoice verification is an important business process in almost every company. In SAP you can verify invoices against purchase orders and goods receipts. SAP provides important functionalities like automatic account determination, financial posting, etc. SAP is powerful software that can meet the needs of any business scenario for any type of business in any part of the world. Its all encompassing nature makes SAP complex. In order to derive maximum benefit for business, SAP must be understood well. Mr. Agrawal attempts to explain SAP completely; a seemingly impossible task. This is his third book on the Materials Management module; his first two books in the Materials Management module are 'Purchasing' and 'Inventory Management'. In this book, like in his earlier books, he explains every screen of SAP MM Invoice Verification. Both the SAP Menu and Customizing Implementation Guide are expanded and the chapter number where they are covered is indicated. This not only creates a direct link between the book and the SAP software, but also ensures that the book is comprehensive. The author has taken care to balance details with overviews that explain linkages between concepts. The book is organized in chapters that are important business activities. Each chapter covers business processes carried out in SAP by the user as well as its related configuration. This book can be used to learn SAP from scratch; it is a learning guide. It is, therefore, useful to persons who are training to be SAP Consultants. Having learnt SAP with the help of this book, the Consultant keeps returning to refer to it. In implementation of SAP, Consultants prepare User Manual. With the availability of this book, their task becomes simpler. In the User Manual, they need to cover only implementation specific points. The user refers to this book as a generic User Manual. As the user gains knowledge he also begins to understand the customizing settings for his implementation. This book can also be used by Business Process Owners and Senior Managers to get an overview of SAP and the important choices it offers.
