reconstruction, film, new media and communication. They explore the major shifts in theory and consider how the dualism of the Cold War has been replaced by the single ideological position of globalized consumerism.” --Book Jacket.

More and more policy issues involve issues that are explicitly values-based, yet public policy analysis tends to skirt around the question of values. Public Policy Values overcomes this reluctance by showing how public policies enable values-choices to be made, often without seeming to do so.

Public Relations Worktext is a writing and planning resource for public relations students and practitioners.

Marc Holzer and Richard W. Schwester have written a fresh and highly engaging textbook for the introductory course in Public Administration. Their coverage is both comprehensive and cutting-edge, including not only all the basic topics (OT, budgeting, HRM), but also reflecting new realities in public administration: innovations in e-government, the importance of new technology, changes in intergovernmental relations, especially the emphasis on inter-local and shared regional resources, and public performance and accountability initiatives. Public Administration has been crafted with student appeal in mind. Each of the book’s chapters is generously illustrated with cartoons, quotes, and artwork—all reinforcing the book’s theme that the field of public administration is rooted in the cultural and political world. Each chapter is also supported with a listing of key terms, exercises, and additional resources. The textbook is supported by one of the most comprehensive and easy-to-use instructors’ manuals of any introductory text on the market today. It contains full lesson plans with activities to accommodate a broad range of teaching and learning styles for each chapter, PowerPoint decks for each chapter (with visuals and links embedded), 8 new long-term project / student presentation ideas, an updated ‘Quotes and Notables’ section with biographical information and media links for each chatper, updated test questions with answer keys, and updated terms and definitions for each chapter.

Recent advances in auditory neuroscience are characterized by a close interaction between neurophysiological findings, psychophysical effects and integrative models that attempt to bridge the gap between neuroscience and psychophysics. This volume introduces the latest developments in this quickly evolving interdisciplinary area. Tutorials by leading international scientists as well as more focused contributions by active researchers providing an invaluable summary of our current knowledge of psychophysics and auditory physiology and the main lines of research in this field. The book will be of interest to anyone involved in hearing research, including neuroscientists, behavioral scientists, acousticians and biophysicists.

From newspapers to social networking sites, the mass media play a huge role in shaping the way we see ourselves and others. In this engaging introduction, Giles explores our relationship with the media, looking at the effects of advertising, celebrity worship and media influence on violent behaviour. Whatever your level of study, this introduction will help you to evaluate the full reach of the media in our lives.

Identifies the major ideas that college and university students will encounter in a basic psychology course and explores connections with Christian belief.

Publics and the City investigates struggles over the making of urban publics, considering how the production, management and regulation of ‘public spaces’ has emerged as a problem for both urban politics and urban theory. Advances a new framework for considering the diverse spatialities of publicness in relation to the city Argues that a city’s contribution to the making of publics goes beyond the provision of places for public gathering

Examines a series of detailed case studies Looks at the relationship between urbanism, public spheres, and democracy

Cultural Heritage (CH) data is syntactically and semantically heterogeneous, multilingual, semantically rich, and highly interlinked. It is produced in a distributed, open fashion by museums, libraries, archives, and media organizations, as well as individual persons. Managing publication of such richness and variety of content on the Web, and at the same time supporting distributed, interoperable content creation processes, poses challenges where traditional publication approaches need to be re-thought. Application of the principles and technologies of Linked Data and the Semantic Web is a new, promising approach to address these problems. This development is leading to the creation of large national and international CH portals, such as Europeana, to large open data repositories, such as the Linked Open Data Cloud, and massive publications of linked library data in the U.S., Europe, and Asia. Cultural Heritage has become one of the most successful application domains of Linked Data and Semantic Web technologies. This book gives an overview on why, when, and how Linked (Open) Data and Semantic Web technologies can be employed in practice in publishing CH collections and other content on the Web. The text first motivates and presents a general semantic portal model and publishing framework as a solution approach to distributed semantic content creation, based on an ontology infrastructure. On the Semantic Web, such an infrastructure includes shared metadata models, ontologies, and logical reasoning, and is supported by shared ontology and other Web services alleviating the use of the new technology and linked data in legacy cataloging systems. The goal of all this is to provide layman users and researchers with new, more intelligent and usable Web applications that can be utilized by other Web applications, too, via well-defined Application Programming Interfaces (API). At the same time, it is possible to provide publishing organizations with more cost-efficient solutions for content creation and publication. This book is targeted to computer scientists, museum curators, librarians, archivists, and other CH professionals interested in Linked Data and CH applications on the Semantic Web. The text is focused on practice and applications, making it suitable to students, researchers, and practitioners developing Web services and applications of CH, as well as to CH managers willing to understand the technical issues and challenges involved in linked data publication. Table of Contents: Cultural Heritage on the Semantic Web / Portal Model for Collaborative CH Publishing / Requirements for Publishing Linked Data / Metadata Schemas / Domain Vocabularies and Ontologies / Logic Rules for Cultural Heritage / Cultural Content Creation / Semantic Services for Human and Machine Users / Conclusions

This book discusses how citizens can participate more effectively in sustainability science and environmental policy debates. It discusses designs for participatory procedures, and experiences of their application to issues of global change. While the focus is on citizen participation, the involvement of specific stakeholders - including water managers and venture capitalists - is also addressed. The book describes how focus group methods were combined with the interactive use of computer models into new forms of participation, tested with six hundred citizens. The results are discussed in relation to other important topics, including greenhouse gas and water management. By combining this with an examination of issues of interactive governance and developing country participation, the book provides state-of-the-art, practical insights for students, researchers and policy makers alike.

This book explores the publishing and reading practices formed and changed by the First World War. From an exploration of British and Australian trench journals to the impact of war on the literary figures of the home front, the essays provide new information about the production, circulation and reception of reading matter during this time.

Handbook of Perception, Volume II: Psychophysical Judgment and Measurement brings together a very large, diverse, and widely scattered literature on human perception, with emphasis on psychophysical judgement and measurement. The book reviews the history of research on choice, judgement, and measurement in order to provide a background for contemporary work. This volume is organized into five sections encompassing 14 chapters and begins with a historical background on psychophysics and the evolution of thinking about the central measurement problem in judgement. The basic psychological context in which choice and judgement occur is considered next, touching on topics such as the problem of information selection and the sources of bias and variability in judgemental processes in relation to memory. The chapters that follow discuss the theoretical frame of measurement models and their applications. In particular, examples of algebraic fundamental measurement, algebraic derived measurement, and probabilistic derived measurement are given. The book also introduces the reader to various psychophysical scaling methods and theories of scaling. This book will serve as a basic source and reference work for psychologists and natural scientists, as well as for anyone in the arts or sciences or those who are interested in human perception.

The past two and a half decades have seen major transformations in public sector management and governance across the globe. This book examines the ways public sector management and governance in Malaysia has changed and is changing under contemporary reform models.

Chapters are written by well-established scholars and academics with intimate knowledge in their respective fields, and provide a thorough and insightful analysis of the reform trends and developments on a range of topics. These include performance management, compensation reforms, public budgeting, accounting and reporting, privatisation and public-private partnership, e-government, managing ethics and accountability, local government and inter-governmental relations. While the book surveys the topics that are central to public sector management and governance, it also focuses on the nature of reforms and changes that were introduced, as well as the forces that have shaped their design and implementation process, and the initial impacts and results. Overall, the book provides students and scholars of Politics and Southeast Asian Studies with a greater appreciation and deeper understanding of the recent developments and current trends of public sector management.

After Richard Garrison lost his sight in a terrorist explosion, he developed vast mental powers that more than compensated for his blindness. He mastered the Psychomech machine, then used it to conquer his enemies and restore his dead love to full and vibrant life.

Psychomech also revealed to Garrison the Psychosphere, a startling reality where mental powers reigned supreme and could influence people and events on Earth. Once he was nearly godlike-or demonic, if one dared become his enemy-but now Garrison's mental abilities grow weaker with each use. He tries desperately to conserve his energies, but he has begun to have strange visions of a mind so different from his own as to be other than human, and knows he must stay alert and strong. Charon Gubwa has invaded the Psychosphere. Twisted and evil, sexually and mentally warped, physically corrupt, Gubwa's desires are simple: More. More drugs. More sex. More power. More of the Earth under his dominion. Richard Garrison must battle Gubwa in the Psychosphere and on Earth. And he must win, no matter the cost to himself or those he loves, or all mankind will be lost. In this hysterical follow-up to the New York Times bestseller White Girl Problems, Babe Walker travels the globe as she tries to figure out the answer to the question foremost on everyone's mind—including hers: Who is Babe Walker? If you’re one of the hundreds of thousands who devoured Babe Walker’s New York Times bestselling novel White Girl Problems or one of the million people who read her blog or follow her on Twitter daily, then you’ve obviously been waiting with bated breath for her hilarious follow-up novel, Psychos. Fresh from a four-month stint in rehab for her “alleged” shopping addiction, Babe Walker returns home to Bel Air ten pounds lighter (thanks to a stomach virus), having made amends (she told a counselor with bad skin she was smart) and confronted her past (after meeting her birth mother for the first time—a fashion model turned farmer lesbian). Although delighted to be home and determined to maintain her hard-won inner peace, Babe now faces a host of outside forces seemingly intent on derailing her path to positive change. Not only is she being trailed by an anonymous stalker, but she’s also reunited with the love of her life, a relationship that she cannot seem to stop self-sabotaging. Babe’s newfound spirituality, coupled with her faith in the universe and its messages, leads her all over the world: shoulder dancing in Paris, tripping out in Amsterdam, and hooking up in the Mediterranean, only to land her back in New York City, forced to choose between a man who is perfect in every way (except for one small detail) and a man who could be The One if only he didn’t drive Babe to utter insanity. Unapologetic and uproarious, Psychos is the send-up of the season—already as timeless as vintage Dior.

"The principal object of the author in writing this book, was to render this noble and delightful science accessible to all classes of readers. A second object of the author was to give the science of man a direct bearing upon other sciences, and especially upon religion and theology. present work is, as far as the author knows, the first attempt to unite German and American mental philosophy. This design has not been executed by bringing together two separate systems or by forming an eclectic compound, which is neither the one nor the other, and the parts of which do not grow forth from one spirit, but are brought together from different sources and united by the writer--a real sphinx in the sphere of science"--Preface. Psychology of the Image outlines a theoretical framework bringing together the semiotic concepts developed by Charles Peirce, the sociological insights of Ervin Goffman and the psychoanalytic ideas of Jacques Lacan. Image studies in fashion, advertising, photography, film studies and psychology have been influenced by these theorists in significant ways. The framework presented helps the reader understand how these ideas relate to the study of different domains of the image: the internal imagery of dreams, external images such as the photograph and image processes which span both contexts, e.g., images we have about ourselves. The topics discussed are organised into three themes. The first considers mental imagery, including sound and dreams. The second addresses the interdependent nature of internal and external images, e.g., the gendered self and social identity. In the third theme, attention turns to external images including television, film, photography, the computer and the internet. Psychology of the Image will be of interest to undergraduates, postgraduates, lecturers and researchers in the fields of psychology, media studies and sociology.

Abensour proposes the idea of a temptation towards psychosis rather than a regression, as a response to the hatred or denial of the subject's origins.

In Psychology: The Science of Person, Mind, and Brain, experienced teacher, researcher, and author Daniel Cervone provides students with a new and exciting way of understanding psychology. Cervone organizes material around three levels of analysis -- person, mind, and brain -- and employs a person-first format that consistently introduces topics at the person level: theory and research on the lives of people in sociocultural contexts. Students are able to make sense of the latest research through what they understand best: people. With fellow teacher and researcher Tracy Caldwell, Cervone has conceived a text beyond the print experience from the ground up, integrating online immersive research experiences and assessment tools that capitalize on research findings on pedagogy and student learning (e.g., the testing effect). Pedagogical Author, Tracy L. Caldwell Working closely with Daniel Cervone, fellow teacher and researcher Tracy Caldwell of Dominican University developed the book's pedagogical program from the Preview Questions at the beginning of each section to the Self-Tests at the end of each chapter. The pedagogy is designed to engage students at multiple levels of Bloom's taxonomy and at multiple points in each chapter.

Much political thinking assumes a distinction between the public and the private. It is, for instance, widely held, that the state may address human action in the "public" realm but not in the "private". This work attempts to expose the flaws of such thinking, and calls for a more nuanced approach.
