Since the mid-1980s, US audiences have watched the majority of movies they see on a video platform, be it VHS, DVD, Blu-ray, Video On Demand, or streaming media. Annual video revenues have exceeded box office returns for over twenty-five years. In short, video has become the structuring discourse of US movie culture. Killer Tapes and Shattered Screens examines how prerecorded video reframes the premises and promises of motion picture spectatorship. But instead of offering a history of video technology or reception, Caetlin Benson-Allott analyzes how the movies themselves understand and represent the symbiosis of platform and spectator. Through case studies and close readings that blend industry history with apparatus theory, psychoanalysis with platform studies, and production history with postmodern philosophy, Killer Tapes and Shattered Screens unearths a genealogy of post-cinematic spectatorship in horror movies, thrillers, and other exploitation genres. From Night of the Living Dead (1968) through Paranormal Activity (2009), these movies pursue their spectator from one platform to another, adapting to suit new exhibition norms and cultural concerns in the evolution of the video subject.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom"bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive!even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting!with lessons that go down easy. You'll be laughing and learning at the same time.

In his latest tour de force, Allen Smith takes on the challenges of life from his own gritty perspective. Everything from surviving on-line dating to enduring his first sigmoidoscopy and advancing age. Watching Grandma Circle the Drain is a collection of Smith's most entertaining work from his previously published columns. In addition to his own experience with struggling to learn Spanish and annihilating the game of golf, he gives the reader an inside look at some of the things they've never wondered about, like managing persistent telemarketers, what it's like to qualify as a sperm donor and some of the most unusual ways to make a living without a college degree. In part two, Smith takes aim at news stories by attacking issues like home schooling, women competing in the Tour de France, dozing air traffic controllers and the first person to marry (and divorce) himself. Watching Grandma Circle the Drain is a bite-sized, entertaining look at the way we complicate our lives. Once you read it, you'll never look at life the same way again.

Recording Culture: Audio Documentary and the Ethnographic Experience is the first book to explore audio documentary as a research method. Authors Daniel Makagon and Mark Neumann demonstrate that audio documentary based in the practices of fieldwork increases the potential for researchers to reach academic and popular audiences and work collaboratively with people in the pursuit and representation of knowledge and experience. Recording Culture: Audio Documentary and the Ethnographic Experience is paired with a companion Web site at [www.recordingculture.org](http://www.recordingculture.org) that contains links to exemplary audio ethnographies.
