In September 2010, the Cuban government decided to embark on an economic reform program, unprecedented after the Revolution in 1959. This opened up opportunities for Cuban economists and scholars to participate in the development of the reform program. Thanks to grants from SSRC (Social Sciences Research Council, New York) and the Norwegian Ministry of Foreign Affairs,

several researchers from the Cuban think tank CEEC (Center for Studies of the Cuban Economy, Havana) got an opportunity to visit countries that could be of interest for the reform process, notably Vietnam, but also Brazil, South Africa and Norway. The result of these field visits and a subsequent workshop involving contributions from Cuban as well as non-Cuban scholars, this volume showcases unprecedented new insights into the process and prospects for reform along many dimensions, including foreign direct investment, import substitution, entrepreneurship and business creation, science and technology development, and fiscal policies. The resulting analysis, in a comparative perspective, provides a framework for future research as well as for business

This book analyzes stochastic processes on networks and regular structures such as lattices by employing the Markovian random walk approach. Part 1 is devoted to the study of local and non-local random walks. It shows how non-local random walk strategies can be defined by functions of the Laplacian matrix that maintain the stochasticity of the transition probabilities. A major result is that only two types of functions are admissible: type (i) functions generate asymptotically local walks with the emergence of Brownian motion, whereas type (ii) functions generate asymptotically scale-free non-local

“fractional” walks with the emergence of Lévy flights. In Part 2, fractional dynamics and Lévy flight behavior are analyzed thoroughly, and a generalization of Pólya's classical recurrence theorem is developed for fractional walks. The authors analyze primary fractional walk characteristics such as the mean occupation time, the mean first passage time, the fractal scaling of the set of distinct nodes visited, etc. The results show the improved search capacities of fractional dynamics on networks. Viewed by some as symbols of progress and by others as inherently flawed, large dams remain one of the most contentious development issues on Earth. Building on the work of the now defunct World Commission on Dams, Thayer Scudder wades into the debate with unprecedented authority.

Employing the Commission's Seven Strategic priorities, Scudder charts the 'middle way' forward by examining the impacts of large dams on ecosystems, societies and political economies. He also analyses the structure of the decision-making process for water resource development and tackles the highly contentious issue of dam-induced resettlement, illuminated by a statistical analysis of 50 cases.

The Corporate Responsibility Code Book has become the go-to guide for companies trying to understand the landscape of corporate responsibility and searching for their own, unique route towards satisfying diverse stakeholders. There is no one-size-fits-all approach. A company may face quite different challenges if it operates in more than one part of the world. And yet stakeholders, especially consumers and investors, are keen for some degree of comparability with which they can evaluate corporate performance. There are countervailing forces at work within corporate responsibility: on the one hand is the need for convergence in order to simplify the large numbers of codes and standards; and, on the other hand, the need to foster diversity and innovation. Many of the best codes of conduct and standards are not well known, while some

CR instruments that are well disseminated are not terribly effective. Some comprehensive codes of conduct achieve nothing, while other quite vague codes of conduct become well embedded into the organization and foster innovation and change. This landmark book explains the best CR instruments available, and distils their most valuable elements. In the fully revised third edition, Deborah Leipziger widens her lens to provide detailed analysis of the UN Guiding Principles on Business and Human Rights, the Gender Equality Principles and ISO 26000 while updating other key tools such as the Equator Principles, the OECD guidelines and GRI 's new G4 framework. The codes in this book cover a wide range of issues, including human rights, labour rights, environmental management, corruption and corporate governance. The book also includes show-to (or process)

Disability-inclusive employment has yet to be achieved in the Asia-Pacific region, home to 472 million working-age persons with disabilities. Employment data concerning persons with disabilities are scarce across countries in the region.

Where such data do exist, persons with disabilities - especially women, youth, and rural habitants among them - are found to fare worse than those without in the labor market. Disability at a Glance 2021: The Shaping of Disability-inclusive Employment in Asia and the Pacific seeks to equip ESCAP members and associate members with updated information and insights on promoting employment for persons with disabilities in the region, through snapshots of the latest figures, trends, policy developments, and inspirational practices.

Global interest in indigenous studies has been rapidly growing as researchers realize the importance of understanding the impact indigenous communities can have on the economy, development, education, and more. As the use, acceptance, and popularity of indigenous knowledge increases, it is crucial to explore how this community-based knowledge provides deeper insights, understanding, and influence on such things as decision making and problem solving. Indigenous Studies: Breakthroughs in Research and Practice examines the politics, culture, language, history, socio-economic development, methodologies, and contemporary experiences of indigenous peoples from around the world, as well as how contemporary issues impact these indigenous communities on a local, national, and global scale. Highlighting a range of topics such as local narratives,

The main objective of this book is to present the on-going process of European integration via a comprehensive analysis of the institutional dynamics of, and politics linked with, the emerging migration law and policy of the European Union. More specifically, it presents the historical evolution, the main institutional legislative and policy steps, the position of, and interactions among, the different actors, and the factors impeding the formation of a common policy at EU level. On this basis a critical analysis is provided of the main institutional problems, the current policy framework, the overarching rationale as well as of the content and

quality of the nascent EU migration law. The book is divided into three parts. The first two parts provide a comprehensive study of the institutional framework and the substantive EC/EU law respectively. The third and final part provides a more general analysis of the policy-making process. Since the major achievements in the field of migration are recent, the book focuses to a great extent on the post-Amsterdam era. However, for reasons of coherence and in order to better evaluate recent developments, a concise overview of the origins of this policy is provided. Moreover, special emphasis is placed on the Schengen acquis, since its mark on European affairs has been and remains pronounced. Overall the attempt has been to provide an account, which is up to date with extensive historical references and combines both an academic and practical perspective to the legal and political issues

Assessment has long been  
recognized as a key feature in  
learning efficacy, especially through  
formative evaluation. Item banking,  
the storage and classification of test  
items, is an essential part of  
systematic assessment. This volume  
is based on a NATO Advanced

Research Workshop held as part of the Special Programme on Advanced Educational Technology. The workshop brought together scholars from around the world to discuss and critically analyze the issues and problems associated with Subjective Probability Measurement (SPM) or the more generic research area called self-assessment. Recent advances in computer technology (expert systems, interactive video disks, and hypermedia) along with the developing sophistication of self-assessment scoring systems based on SPM made this conference particularly important and timely. The book is divided into three main parts: - The input: item banking and

hypermedia - The process:  
subjective probabilities - The output:  
teaching and learning feedbacks. In  
summary, although SPM is a  
difficult theoretical concept for most  
educators to comprehend, the  
sophisticated nature of modern  
computer systems coupled with  
comprehensive formative and  
summative evaluation and self-  
assessment systems make SPM  
transparent to the user.

Corporate Social Responsibility has for long been on the agenda in the business world and recently, it has also become a political agenda in the European Union. Focusing on

international supply chains and their control based on studies of law in several European jurisdictions, this book aims to advance the discussion on the application and enforcement of CSR. Drawing parallels to US and Canadian law, the book explores to what extent private law tools can be used as an enforcement device and it ultimately asks if what we are witnessing is the formation of a new area of law, employing the interplay of contract and tort – a law of "production liability", as a corollary of the concept of "product liability".

Unions have long been a central force in the democratization of national and global governance, and this timely book examines the role of labor in fighting for a more democratic and equitable world. In a clear and compelling narrative, Dimitris Stevis and Terry Boswell explore the past accomplishments and the formidable challenges still facing global union politics. Outlining the contradictions of globalization and global governance, they assess the implications for global union politics since its inception in the nineteenth century. The authors place this key social movement in a political economy framework as they argue that social movements can be fruitfully

compared based on their emphases on egalitarianism and internationalism. Applying these concepts to global union politics across time, the authors consider whether global union politics has become more active and more influential or has failed to rise to the challenge of global capitalism. All readers interested in global organizations, governance, and social movements will find this deeply informed work an essential resource. Truly comprehensive in scope - and arranged in A-Z format for quick access - this eight-volume set is a one-source reference for anyone researching the historical and contemporary details of more than 170 major issues confronting American society. In 2009, the International Labour Organization (ILO) celebrated its ninetieth anniversary. The First World War and the revolutionary wave it provoked in Russia and elsewhere were powerful inspirations for the founding of the ILO. There was a growing understanding that social

justice, in particular by improving labour conditions, was an essential precondition for universal peace. Since then, the ILO has seen successes and set-backs; it has been ridiculed and praised. Much has been written about the ILO; there are semi-official histories and some critical studies on the organization's history have recently been published. Yet, further source-based critical and comprehensive analyses of the organization's origins and development are still lacking. The present collection of eighteen essays is an attempt to change this unsatisfactory situation by complementing those histories that already exist, exploring new topics, and offering new perspectives. It is guided by the observation that the ILO's history is not primarily about
