This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

A nascent recovery is underway in Thailand following the COVID-19 downturn. Ample policy buffers, underpinned by judicious management of public finances, allowed the authorities to implement a multipronged package of fiscal, monetary, and financial policies to mitigate the COVID-19 impact on households, businesses, and the financial system. This, together with rigorous containment measures, led to a successful flattening of the infection curve during most of 2020. Nevertheless, the pandemic has taken a large toll on the economy, potentially inducing long-term scarring and increasing inequality.

Sequence - Evolution - Function is an introduction to the computational approaches that play a critical role in the emerging new branch of biology known as functional genomics. The book provides the reader with an understanding of the principles and approaches of functional genomics and of the potential and limitations of computational and experimental approaches to genome analysis. Sequence - Evolution - Function should help bridge the "digital divide" between biologists and computer scientists, allowing biologists to better grasp the peculiarities of the emerging field of Genome Biology and to learn how to benefit from the enormous amount of sequence data available in the public databases. The book is non-technical with respect to the computer methods for genome analysis and discusses these methods from the user's viewpoint, without addressing mathematical and algorithmic details. Prior practical familiarity with the basic methods for sequence analysis is a major advantage, but a reader without such experience will be able to use the book as an introduction to these methods. This book is perfect for introductory level courses in computational methods for comparative and functional genomics.

“Fragility”—the combination of poor governance, limited institutional capability, low social cohesion, and weak legitimacy—leads to erosion of the social contract and diminished resilience. This study reviews how the international community has responded to this challenge and offers ideas on how that response can be improved.

The book provides an assessment of BRICS cooperation, focusing on the new financing mechanisms created by the BRICS, the monetary fund and the development bank. It is shown that Brazil, Russia, India and China, joined later by South Africa, share common traits that led them to cooperate in the reform of the international financial architecture, especially the G20 and the IMF. After 2012, in light of the difficulty of having advanced countries agree to move from “tinkering at the margins” to fundamental reform of the Bretton Woods institutions, the BRICS decided to establish their own monetary fund, named the BRICS Contingent Reserve Arrangement (CRA), and their own development bank, named the New Development Bank (NDB). The book describes the difficult negotiations among the BRICS between 2012 and 2014. Some of these difficulties revealed the weaknesses that would lead the CRA and the NDB to make slow progress in the first years of their existence. The book provides an overview of the strong points and weaknesses of the initial phase of these financing mechanisms. It ends with a discussion of the future of the BRICS, highlighting that joint action by the five countries is likely to remain an important feature of the international landscape in the decades to come.

Inside Inequality in the Arab Republic of Egypt: Facts and Perceptions Across People, Time, and Space comprises four papers prepared in the framework of the Egypt inequality study financed by the World Bank. The first paper, by Sherine Al-Shawarby, reviews the studies on inequality in Egypt since the 1950s with the double objective of illustrating the importance attributed to inequality through time and of presenting and comparing the main published statistics on inequality. The second paper, by Branko Milanovic, turns to the global and spatial dimensions of inequality. The Egyptian society remains deeply divided across space and in terms of welfare, and this study unveils some of the hidden features of this inequality. The third paper, by Paolo Verme, studies facts and perceptions of inequality during the 2000-2009 period, which preceded the Egyptian revolution. The fourth paper, by Sahar El Tawila, May Gadallah, and Enas Ali A.El-Majeed, assesses the state of poverty and inequality among the poorest villages of Egypt. The paper attempts to explain the level of inequality in an effort to disentangle those factors that derive from household abilities from those factors that derive from local opportunities. Inside Inequality in the Arab Republic of Egypt provides some initial

elements that could explain the apparent mismatch between inequality measured with household surveys and inequality aversion measured by values surveys. This is a particularly important and timely topic to address in light of the unfolding developments in the Arab region. The book should be of interest to any observer of the political and economic evolution of the Arab region in the past few years and to poverty and inequality specialists interested in a deeper understanding of the distribution of incomes in Egypt and other countries in the Middle East and North Africa region.

Introduction to Probability

This comprehensive addition to the debate on sustainable development has been produced in order to take a global pulse on how the financial services sector is responding to the challenge of shareholder and stakeholder expectations on social and environmental performance. In the opinion of many commentators in this new book, given the intermediary role that banks play within economies, their potential contribution toward sustainable development is enormous. Indeed, for banks, the conclusion that corporate sustainability has become an important concept that increases long-term shareholder value is becoming difficult to deny. To date, banks have been relatively slow to examine their exposure to risk (the environmental and social performance of their clients) and the business opportunities of sustainable development (the products and services they offer). Not before time, Sustainable Banking concludes that banks are beginning to change, with both risk and opportunity becoming established elements in banking policies towards environmental sustainability. In addition, banks have now begun to focus on and address their own environmental performance. Through the use of case studies and detailed analysis, the book examines the environmental policies of banks, the importance of transparency and communication with their stakeholders, environmental and ethical investment funds, current practice by the providers of financial services with regard to environmental management and, finally, the key role of government, NGOs and multilateral banks in delivering sustainability. Sustainable banking has not, however, been achieved and nor will it be in the immediate future. As globalisation proceeds apace, Sustainable Banking argues that improvements are necessary in banks' attitudes toward transparency and accountability with regard to their lending policies. In addition, in order to promote best practice, the leading banks need to start measuring their customers' environmental performance in order to persuade them that minimum compliance to regulations will no longer suffice. The book finds many shining examples in the co-operative, mutual and social sectors for the big players to emulate. Environmental and ethical considerations in such loan portfolios have proven to be profitable and "best-in-class" larger banks are now also reaping benefits. The unprecedented success of this book has attracted contributors from four continents including Deloitte & Touche, Rabobank, The World Bank, The European Bank for Reconstruction and Development, The United Nations Environment Programme, The World Business Council for Sustainable Development, UBS, Henderson Investors, KPMG, The World Resources Institute and SAM Sustainability. Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of evidence, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed analysis of these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorney general, and forensic science educators.

This report is intended to stimulate thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories over the next 15 years. As with the NIC's previous Global Trends reports, we do not seek to predict the future, which would be an impossible feat, but instead provide a framework for thinking about possible futures and their implications. In-depth research, detailed modeling and a variety of analytical tools drawn from public, private and academic sources were employed in the production of Global Trends 2030. NIC leadership engaged with experts in nearly 20 countries, from think tanks, banks, government offices and business groups, to solicit reviews of the report.

The warming of the Earth has been the subject of intense debate and concern for many scientists, policy-makers, and citizens for at least the past decade. Climate Change Science: An Analysis of Some Key Questions, a new report by a committee of the National Research Council, characterizes the global warming trend over the last 100 years, and examines what may be in store for the 21st century and the extent to which warming may be attributable to human activity.

The ultimate guide for anyone wondering how President Joe Biden will respond to the COVID-19 pandemic—all his plans, goals, and executive orders in response to the coronavirus crisis. Shortly after being inaugurated as the 46th President of the United States, Joe Biden and his administration released this 200 page guide detailing his plans to respond to the coronavirus pandemic. The National Strategy for the COVID-19 Response and Pandemic Preparedness breaks down seven crucial goals of President Joe Biden's administration with regards to the coronavirus pandemic: 1. Restore trust with the American people. 2. Mount a safe, effective, and comprehensive vaccination campaign. 3. Mitigate spread through expanding masking, testing, data, treatments, health care workforce, and clear public health standards. 4. Immediately expand emergency relief and exercise the Defense Production Act. 5. Safely reopen schools, businesses, and travel while protecting workers. 6. Protect those most at risk and advance equity, including across racial, ethnic and rural/urban lines. 7. Restore U.S. leadership globally and build better preparedness for future threats. Each of these goals are explained and detailed in the book, with evidence about the current circumstances and how we got here, as well as plans and concrete steps to achieve each goal. Also included is the full text of the many Executive Orders that will be issued by President Biden to achieve each of these goals. The National Strategy for the COVID-19 Response and Pandemic Preparedness is required reading for anyone interested in or concerned about the COVID-19 pandemic and its effects on American society.

This paper discusses Afghanistan's Request for a Three-Year Arrangement Under the Extended Credit Facility (ECF). The program sets out a structural reform agenda that focuses on institution building, fiscal and financial reforms, and measures to combat corruption to lay the foundations for scaled up private sector development. The envisaged reforms dovetail with Afghanistan's National Development Framework currently being finalized. The program aims to preserve macro-financial stability by implementing prudent fiscal, monetary, and financial policies, and by maintaining external buffers and a flexible exchange rate regime. The IMF staff supports the authorities' request for an ECF arrangement under an IMF-supported program.

Informed Cities looks at the knowledge brokerage processes between cities and higher education institutions, and in particular evaluates governance mechanisms for monitoring local sustainability and the role of research within this. The first part of the book provides an analysis of tools for governing sustainable cities and develops a typology of existing tools. It then considers approaches to monitor local sustainability on a European level, focusing on a number of key tools such as the Covenant of Mayors, Reference Framework for Sustainable Cities, and Green Capital Award. The second part of the book introduces an explorative application of two tools that the author team have used in practice to monitor local sustainability, Urban Ecosystems Europe and Local Evaluation 21, presenting and evaluating European level data collected from local governments. The third part of the book looks deeper into a number of case studies discussing how a working and rewarding city-university connection can be created and nourished in an administrative and political setting. Finally, the last part of the book reflects on lessons learned from the application of the tools and accompanying research process and makes recommendations for further developing monitoring tools for urban sustainability on a European level. This book will be essential reading for professionals in urban and regional planning who are tasked with monitoring the effects of sustainability policies, as well as for graduate students in planning, environmental governance, sustainable development and related disciplines.

This 2015 Article IV Consultation highlights that Afghanistan remains a poor fragile state that is far from self-reliance. Significant fiscal and banking vulnerabilities emerged in 2014. Domestic revenue collection fell below its 2013 level because of lower growth, declining imports, and lower compliance, while operating expenditure increased. The treasury cash balance fell to dangerously low levels in the second half of 2014, and domestic payment arrears and unfunded allotments emerged. The future path of the economy is highly dependent on the authorities' delivering on their economic reform commitments, continued donor support, and improvements in security.

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

Afghanistan is confronting the Covid-19 pandemic and its socioeconomic fallout amid rising insecurity. Supported by donors, the authorities boosted health and social spending to cushion the pandemic's impact on the vulnerable. Policy measures kept the output contraction to 2 percent in 2020, but poverty rose and the fiscal deficit widened. Political uncertainty has risen as the peace talks between the government and Taliban stalled and the U.S., NATO, and allies announced the withdrawal of their troops by September. In a strong sign of support for Afghanistan's development and reforms, donors pledged some US\$12 billion civilian grants over 2021–24 at the Geneva conference in November 2020.

This publication covers global megatrends for the next 20 years and how they will affect the United States. This is the fifth installment in the National Intelligence Council's series aimed at providing a framework for thinking about possible futures and their implications. The report is intended to stimulate strategic thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories during the next 15-20 years by identifying critical trends and potential discontinuities. The authors distinguish between megatrends, those factors that will likely occur under any scenario, and game-changers, critical variables whose trajectories are far less certain. NIC 2012-001. Origins of the Community Development Financial Institutions Movement

January 2021

The FDIC Quarterly Banking Profile

Facts and Perceptions Across People, Time, and Space

Decades before Occupy Wall Street challenged the American financial system, activists began organizing alternatives to provide capital to “unbankable” communities and the poor. With roots in the civil rights, anti-poverty, and other progressive movements, they brought little training in finance. They formed nonprofit loan funds, credit unions, and even a new bank—organizations that by 1992 became known as “community development financial institutions,” or CDFIs. By melding their vision with that of President Clinton, CDFIs grew from church basements and kitchen tables to number more than 1,000 institutions with billions of dollars of capital. They have helped transform community development by providing credit and financial services across the United States, from inner cities to Native American reservations. Democratizing Finance traces the roots of community development finance over two centuries, a history that runs from Benjamin Franklin, through an ill-starred bank for African American veterans of the Civil War, the birth of the credit union movement, and the War on Poverty. Drawn from hundreds of interviews with CDFI leaders, presidential archives, and congressional testimony, Democratizing Finance provides an insider view of an extraordinary public policy success. Democratizing Finance is a unique resource for practitioners, policymakers, researchers, and social investors. This 2012 Article IV Consultation highlights that Tunisia experienced a severe recession in 2011 amid domestic and regional turmoil. Real GDP contracted by 1.8 percent, reflecting a sharp decline in tourism and foreign direct inflows. As a result of the economic downturn and the return of Tunisian workers from Libya, unemployment soared to 19 percent in 2011, with youth unemployment at 42 percent. Tunisia’s medium-term economic growth potential remains favorable, but unleashing it requires a comprehensive package of structural reforms to foster private investment.

The Tongue and Quill has been a valued Air Force resource for decades and many Airmen from our Total Force of uniformed and civilian members have contributed their talents to various editions over the years. This revision is built upon the foundation of governing directives and user's inputs from the unit level all the way up to Headquarters Air Force. A small team of Total Force Airmen from the Air University, the United States Air Force Academy, Headquarters Air Education and Training Command (AETC), the Air Force Reserve Command (AFRC), Air National Guard (ANG), and Headquarters Air Force compiled inputs from the field and rebuilt The Tongue and Quill to meet the needs of today's Airmen. The team put many hours into this effort over a span of almost two years to improve the content, relevance, and organization of material throughout this handbook. As the final files go to press it is the desire of The Tongue and Quill team to say thank you to every Airman who assisted in making this edition better; you have our sincere appreciation!
