

Research Papers On The Death Penalty

Deterrence and the Death Penalty National Academies Press

First published in 1994. Routledge is an imprint of Taylor & Francis, an informa company.

(This is an abridged edition available only on Amazon websites.) This volume covers aspects of sudden infant and early childhood death, ranging from issues with parental grief, to the most recent theories of brainstem neurotransmitters. It also deals with the changes that have occurred over time with the definitions of SIDS (sudden infant death syndrome), SUDI (sudden unexpected death in infancy) and SUDIC (sudden unexpected death in childhood). The text will be indispensable for SIDS researchers, SIDS organisations, paediatric pathologists, forensic pathologists, paediatricians and families, in addition to residents in training programs that involve paediatrics. It will also be of use to other physicians, lawyers and law enforcement officials who deal with these cases, and should be a useful addition to all medical examiner/forensic, paediatric and pathology departments, hospital and university libraries on a global scale. Given the marked changes that have occurred in the epidemiology and understanding of SIDS and sudden death in the very young over the past decade, a text such as this is very timely and is also urgently needed.

This is an account of one of life's most painful experiences--the sudden death of a child. A mother's anguish compels her to examine beliefs about what comes after death and to explore ancient healing methods in Mexico, Brazil, and Bali. At its core a spiritual odyssey, The Sacred Wound is about creating meaning from life-shattering events--events which can utterly destroy us or serve as a call to extraordinary courage and growth. A life-shattering event is a modern day "sacred wound," a wounding so profound that it pierces the soul and penetrates the veils of who we are and what we think life is about. Like a mythological hero, we will emerge from the ordeal another person. As the author says, "For three years grief was my consort, it became my teacher." This inspiring and searingly honest book is about more than survival following the death of a loved one; it is about the gift in tragedy's other hand. It is about discovering the truth that love is the central experience of life and not simply mortality, and that this truth can emerge in ways we can never predict or expect

Estimation of the Time Since Death remains the foremost authoritative book on scientifically calculating the estimated time of death

postmortem. Building on the success of previous editions which covered the early postmortem period, this new edition also covers the later postmortem period including putrefactive changes, entomology, and postmortem r

The concept of a "good death" has been hotly debated in medical circles for decades. This volume delves into the possibility and desirability of

a "good death" by presenting the psychosocial measures of care as a crucial component, such as religion, existentialism, hope and meaning-making. The volume also focuses on oncologic psychiatry and the influence of technology as a means to alleviate pain and suffering, and potentially provide relief to those at the end of life. Such initiatives are aimed at diminishing pain and are socially bolstering and emotionally comforting to ensure a peaceful closure with life as opposed to a battle waged. Utilizing the most recent information from medical journals and books to present the latest on healthcare and dying today, this volume crosses the boundaries of thanatology, psychology, religion, spirituality, medical ethics and public health.

Are you worried about high cholesterol? The scientific evidence in this book will shock you! The statistics from the scientific literature actually show that having LOW cholesterol means you are more likely to die earlier. The 101 scientific papers in this book show: - Low cholesterol levels are associated with a shorter life. - Low levels of HDL and LDL cholesterol are linked to a shorter life-span. - High cholesterol does NOT cause heart disease. - Low cholesterol leads to illness and death in many diseases and conditions. - Statin drugs and low-fat diets may lead to higher death rates. - Saturated fat can give protection from heart disease. - Cholesterol is an essential substance needed for a long healthy life. This book is based on the research of doctors, professors and scientists and includes 101 scientific papers, the findings of which are explained in an easy to read user friendly format. This information will enable readers to make informed choices about the alleged wisdom of actively trying to lower their cholesterol levels.

The author compares near-death experiences from all over the world, revealing their similarities as well as their differences.

Two Days to Live. What Would You Write? a Memoir of Hope

Daily Devotional and Three Month Grief Journal "Blessed are those who mourn, for they will be comforted." -Matthew 5:4 What happens when your loved ones die? Death happens to everyone. We are all affected by the grief at one point or another. This seven day christian grief work devotional uses biblical stories and references to help you understand what the bible says about death, and your own feelings associated with the loss. Grief Work Diaries and Grief Work Journals are a recommended coping tool for exploring the grief cycle and emotions that arise after the loss of a loved one. When completed, grief diaries tell the story of daily life through the cycle of grieving, forever giving you a written account from your perspective.. Grief journals and diaries allow you to not only express the feelings that arise after death and loss, but to review your progress through the stages of grief. You need to take time to pause, reflect, and focus on yourself. It is important to express any feelings you may have during the grieving process. Grief work journals

and grief work diaries allow you to record thoughts, emotions, and feelings that otherwise may be lost or overlooked. Death and loss can cause intense emotions. Many report feeling relieved or more at peace after expressing these feelings in a grief journal. Reflection through the process of grief is important. Reflecting on a previous state of mind allows you to understand how far you have come. The grief cycle is not always a fluid process, which makes frequent reflection all that more important. It is important to note the changes in mindset and yourself through your writing. _____

The Daily Grief Work Devotional features: - The Seven Stages Of Grief Daily Devotional - Personal Entry Areas - Reflection Questions The three (3) month Deluxe Grief Work Journal features: - Daily Mood Tracker - Daily Positive and Negative Tracker - Daily Entry area - Thought Provoking Questions - Monthly Review - Goal Tracking

How does a boy labeled "slow" go on to graduate with honors and distinction-not only from college, but then earn a PhD and his medical degree? How does a doctor with severe colorblindness become a renowned surgeon? How does a surgeon dedicated to saving patients on the verge of death respond when told his own death is imminent? Paul Nemiroff was a boy who dreamed of becoming a doctor. Labeled slow and told he would never finish high school, he overcame numerous obstacles and went on to college, a masters, a PhD and medical school. He became a top head and neck surgeon at leading medical centers, a pioneer of hyperbaric oxygen wound treatment, a worldwide published researcher and lecturer, an award winning TV medical correspondent, and a runner of 13 marathons. At the peak of his career, his life trajectory was abruptly altered when he received a call-he had become the patient and was told he only had two years to live-facing a crossroads of formidable choices. Undaunted, Dr. Paul discovered and experimented with a revolutionary treatment protocol that he believes has kept him alive and in reasonably good health for 15 years-allowing him to share this knowledge which he hopes will inspire others and be a catalyst in the quest for a cure.

The death penalty is contested across modern social, political, academic, and legal institutions, and this interdisciplinary text helps readers analyze that debate. It begins with *Furman v. Georgia*, which doubles as the Supreme Court's only decision striking down the death penalty and as the origin of the modern American death penalty. The text explores the legal rules and moral reasoning behind the principle that the death penalty be reserved for the worst offenders, as well as the most uncomfortable realities of American capital punishment--the likelihood of wrongful executions and the undeniable influence of race on death penalty practice. Discussion of law and theory is always supplemented with appropriate empirical studies, and is connected to the practice of lawyers on the ground. The text concludes with a glimpse to the future of the death penalty, and situates the increasingly exceptional American experience in an international context. This legal material is carefully presented so as to remain accessible to non-lawyers, and it is intended for anyone with an interest in capital punishment.

Capital punishment is irrevocable. It prohibits the correction of mistakes by the justice system and leaves no room for human error, with the gravest of consequences. There is no evidence of a deterrent effect of the death penalty. Those sacrificed on the altar of

retributive justice are almost always the most vulnerable. This book covers a wide range of topics, from the discriminatory application of the death penalty, wrongful convictions, proven lack of deterrence effect, to legality of the capital punishment under international law and the morality of taking of human life.

Estimation of the Time Since Death

The Assassination of Michael Collins

Family Experiences of Terminal Care and Irreplaceable Loss

Rising Above the Ashes will compassionately guide you through your grief and help you to identify what brings you joy. You will learn how to grieve your loss—whether it's of a loved one, your beloved family pet, a business relationship, or big job or client—and identify and reignite your joy. You will also learn that grief doesn't define who you are. This book will help you to grieve on your own terms—to cry through it, lift you up, and reignite your passion for life. If you're willing to do the work to heal, there will be joy after all of this overwhelm and chaos. If you're ready to get out of the overwhelm you may be experiencing and begin the journey to healing your broken heart, this book is for you.

Non-fiction Biography / history Ireland – War of Independence/Civil War Description: An in-depth study of the death of Michael Collins, hero of the 1916 Easter Rising, and leader of Ireland's War of Independence. This book offers a startling new perspective on one of history's most notorious unsolved mysteries: his fatal shooting in 1922, while Commander-in-Chief of newly-independent Ireland. Its controversial reconstruction of events at Beal na mBlath may be shocking to some: yet demonstrably fits the known facts and eyewitness accounts. This is the first book on this famous "cold case" in decades; carrying on where John Feehan's landmark edition of 1991 left off. It presents the most complete overview of the evidence ever published; as well as an itemized catalogue of the various witnesses' mutual contradictions and corroborations."

In this profound and hopeful book, a mathematician and celebrated teacher shows how mathematics may help all of us—even the math-averse—to understand and cope with grief. We all know the euphoria of intellectual epiphany—the thrill of sudden understanding. But coupled with that excitement is a sense of loss: a moment of epiphany can never be repeated. In *Geometry of Grief*, mathematician Michael Frame draws on a career's worth of insight—including his work with pioneer of fractal geometry Benoit Mandelbrot—and a gift for rendering the complex accessible as he delves into this twinning of

understanding and loss. Grief, Frame reveals, can be a moment of possibility. Frame investigates grief as a response to an irrevocable change in circumstance. This reframing allows us to see parallels between the loss of a loved one or a career and the loss of the elation of first understanding a tricky concept. From this foundation, Frame builds a geometric model of mental states. An object that is fractal, for example, has symmetry of magnification: magnify a picture of a mountain or a fern leaf—both fractal—and we see echoes of the original shape. Similarly, nested inside great loss are smaller losses. By manipulating this geometry, Frame shows us, we may be able to redirect our thinking in ways that help reduce our pain. Small-scale losses, in essence, provide laboratories to learn how to meet large-scale losses. Interweaving original illustrations, clear introductions to advanced topics in geometry, and wisdom gleaned from his own experience with illness and others' remarkable responses to devastating loss, Frame's poetic book is a journey through the beautiful complexities of mathematics and life. With both human sympathy and geometrical elegance, it helps us to see how a geometry of grief can open a pathway for bold action.

NEW YORK TIMES EDITORS' CHOICE • A deeply reported, searingly honest portrait of the death penalty in Texas—and what it tells us about crime and punishment in America “If you're one of those people who despair that nothing changes, and dream that something can, this is a story of how it does.”—Anand Giridharadas, The New York Times Book Review WINNER OF THE J. ANTHONY LUKAS AWARD In 1972, the United States Supreme Court made a surprising ruling: the country's death penalty system violated the Constitution. The backlash was swift, especially in Texas, where executions were considered part of the cultural fabric, and a dark history of lynching was masked by gauzy visions of a tough-on-crime frontier. When executions resumed, Texas quickly became the nationwide leader in carrying out the punishment. Then, amid a larger wave of criminal justice reform, came the death penalty's decline, a trend so durable that even in Texas the punishment appears again close to extinction. In *Let the Lord Sort Them*, Maurice Chammah charts the rise and fall of capital punishment through the eyes of those it touched. We meet Elsa Alcala, the orphaned daughter of a Mexican American family who found her calling as a prosecutor in the nation's death penalty capital, before becoming a judge on the state's highest court. We meet Danalynn Recer, a lawyer who became obsessively devoted to unearthing the life stories of men who committed terrible crimes, and fought for mercy in courtrooms across the state. We meet death row prisoners—many of them once-famous figures like Henry Lee Lucas, Gary Graham, and Karla Faye Tucker—along with their families and the families of their victims. And we meet the executioners, who struggle openly with what society has asked them to do. In tracing these interconnected lives against the rise of mass incarceration in Texas and the country as a whole, Chammah explores what the persistence of the death penalty tells us about forgiveness and retribution, fairness and justice, history and myth. Written with intimacy and grace, *Let the Lord Sort Them* is the definitive portrait of

a particularly American institution.

Workshop Summary

The Hope for a "Good Death"

London Bones: Book One

The Health Effects of Cannabis and Cannabinoids

Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda—outlining gaps in current knowledge and opportunities for providing additional insight into these issues—that summarizes and prioritizes pressing research needs.

Vivia is a hag, one of the last of her race, and can die, visit the underworld and return at will. She has a job she loves—helping London's most vulnerable supernaturals, even if her colleague Malcolm drives her round the bend on a daily basis. Then Malcolm is outed as a zombie and, along with his teenage son Ben, flees the police. When Malcolm is captured, he is only able to pass on one message before his dead brain degrades completely: 'He killed me.' As Ben remains missing, the police find decades-old corpses hidden near Malcolm's house, and Vivia begins to realise there's a lot more at stake than just a possible zompocalypse... If ever there was an area requiring that the research-practice gap be bridged, surely it occurs where thanatologists engage with people dealing with human mortality and loss. The field of thanatology—the study of death and dying—is a complex, multidisciplinary area that encompasses the range of human experiences, emotions, expectations, and realities. The Handbook of Thanatology is the most authoritative volume in the field, providing a single source of up-to-date scholarship, research, and practice implications. The handbook is the recommended resource for preparation for the prestigious certificate in thanatology

(CT) and fellow in thanatology (FT) credentials, which are administered and granted by ADEC.

When a ventilator prevented her from speaking during her final hours, Jennifer started writing. After her death, her husband turns to those pages to tell her story of courage and faith. James had just walked through the door after a day's work when Jennifer told him the news that changed everything: it was cancer. In the following two years they would lose their sense of normalcy and their dreams for the future. But along the way, they would gain something even greater than their loss. Told through the eyes of a grieving husband is this true story of a young woman's fight for her life. Jennifer's final words, penned by hand when a ventilator prevented her from speaking, provide a powerful backdrop to this journey of faith and hope. A memoir that also offers a practical pathway for those struggling with loss, *The Last Seven Pages* is a testimony of a God who is present in our darkest moments, and who turned a devastating illness into a life-changing promise.

The Death of Woman Wang

Psychosocial Interventions in End-of-Life Care

The US Department of Justice's National Institute of Justice (NIJ) asked the Institute of Medicine (IOM) of The National Academies of Sciences, Engineering, and Medicine to conduct a workshop that would examine the interface of the medicolegal death investigation system and the criminal justice system. NIJ was particularly interested in a workshop in which speakers would highlight not only the status and needs of the medicolegal death investigation system as currently administered by medical examiners and coroners but also its potential to address emerging issues facing contemporary society in America. Additionally, the workshop was to highlight priority areas for the IOM study on this topic. To achieve those goals, IOM constituted the Committee for the Workshop on the Medicolegal Death Investigation System, which developed a workshop that focused on the role of the medical examiner and coroner death investigation system and its promise for improving both the criminal justice system and the public health and health care system to respond to terrorist threats and events. Six panels were formed to highlight different aspects of the medicolegal death investigation system, including ways to improve it and expand it beyond its traditional response and meet growing demands and challenges. This report summarizes the Workshop presentations and discussions that followed them.

When lives are dominated by hunger, what becomes of love? When assaulted by daily acts of violence and untimely deaths, what happens to trust? Set in the lands of Northeast Brazil, this is an account of the everyday experience of scarcity, suffering, and hope that centres on the lives of the women and children of a hillside "favela". Bringing her readers to the impoverished settlement of a modern plantation town of Bom Jesus de Mata, where she has worked on and off for 25 years, Nancy Scheper-Hughes

generations of shantytown women as they struggle to survive through hard work, cunning and triage. It is a story of love, told at the most basic level of bodies, emotions, desires and needs. Most disturbing - and controversial - is her finding that love, as conventionally understood, is something of a bourgeois myth, a luxury for those who can reasonably expect their infants cannot, that their infants will live.

Powerful, wry essays offering modern takes on a primitive practice, from one of our most widely read death penalty authors, Ruth Bader Ginsburg has noted, people who are well represented at trial rarely get the death penalty. But as Marc Bookman in a dozen brilliant essays, the problems with capital punishment run far deeper than just bad representation. Exploring prosecutorial misconduct, racist judges and jurors, drunken lawyering, and executing the innocent and the mentally ill demonstrate that precious few people on trial for their lives get the fair trial the Constitution demands. Today, death sentences continue to capture the hearts, minds, and eblasts of progressives of all stripes—including the rich and famous (see *The Death of Woman Wang* advocacy)—but few people with firsthand knowledge of America's "injustice system" have the literary chops to bring these stories to life. Enter Marc Bookman. With a voice that is both literary and journalistic, the veteran capital defense lawyer and former *Time* Best American Essays "notable" author exposes the dark absurdities and fatal inanities that undermine the logic of the death penalty wherever it still exists. In essays that cover seemingly "ordinary" capital cases over the last thirty years, Bookman shows how violent crime brings out our worst human instincts—revenge, fear, retribution, and prejudice. Combining these observations with the criminal legal system's weaknesses—purposely ineffective, arbitrary, or widely infected with racism and misogyny—is a powerful indictment of injustice. Bookman has been charming and educating readers in the pages of *The Atlantic*, *Mother Jones*, and *Slate* for years, and his essays and wisdom are now collected and preserved in *A Descending Spiral*.

In *The Death of Woman Wang* the award-winning historian Jonathan Spence paints a vivid picture of an obscure time in provincial China in the late 17th century. Drawing on a range of sources, including local Chinese histories, the memoirs of missionaries, and other contemporary writings, Spence reconstructs an extraordinary tale of rural tragedy in a remote corner of the Chinese province of Shantung. Life in the county of T'an-ch'eng emerges as an endless cycle of floods, plagues, crop failures, banditry and heavy taxation. Against this turbulent background a tenacious tax collector, an irascible farmer, and an ambitious official act out a poignant drama at whose climax the wife, having run away from her husband, returns to him, only to die a few days later. *Death of Woman Wang* not only magnificently evokes the China of the late Ming period, but also deepens our understanding of the China we know today.

Deterrence and the Death Penalty

Death Can Be Cured And 99 Other Medical Hypotheses

This book synthesizes scholarly reflections with personal accounts from prison administrators and inmates to show the harsh reality of life on death row.

Many studies during the past few decades have sought to determine whether the death penalty has any deterrent effect on homicide rates. Researchers have reached widely varying, even contradictory, conclusions. Some studies have concluded that the threat of capital punishment deters murders, saving large numbers of lives; other studies have concluded that executions actually increase homicides; still others, that executions have no effect on murder rates. Commentary among researchers, advocates, and policymakers on the scientific validity of the findings has sometimes been acrimonious. Against this backdrop, the National Research Council report Deterrence and the Death Penalty assesses whether the available evidence provides a scientific basis for answering questions of if and how the death penalty affects homicide rates. This new report from the Committee on Law and Justice concludes that research to date on the effect of capital punishment on homicide rates is not useful in determining whether the death penalty increases, decreases, or has no effect on these rates. The key question is whether capital punishment is less or more effective as a deterrent than alternative punishments, such as a life sentence without the possibility of parole. Yet none of the research that has been done accounted for the possible effect of noncapital punishments on homicide rates. The report recommends new avenues of research that may provide broader insight into any deterrent effects from both capital and noncapital punishments.

A TRUE CRIME THRILLER THAT EXPLORES THE DARKEST REGIONS OF ROMANTIC INFATUATION. THE YEAR: 1969 THE SETTING: Berkeley, California THE STORY: Amidst the turmoil of student rebellion two loners encounter each other and turn an innocent flirtation into a dance of death. THE CHARACTERS: Prosenjit Poddar was the brilliant engineering student who wanted nothing more than to return to his native India a big success and to marry a woman of his

parents' choosing. Tanya Tarasoff was the naive coed who just wanted somebody to love. And Larry Moore was the young psychologist who thought he recognized the warning signs that his patient was not just suffering from a jilted love affair... but was about to commit an act of murder. **THE STAKES:** In a culture clash that pits the traditional values of male-dominated India against free-love attitudes of Berkeley in the '60s, an impending tragedy unfolds. Soon Larry Moore finds himself face-to-face with the biggest dilemma of his career. What does a doctor do if he perceives his patient as mentally unstable and a threat to the well-being of another... but is bound by the oath of doctor-patient confidentiality not to warn the police? This true story tracks Moore's race against time to stop the inevitable. **BAD KARMA** is more than an anatomy of madness; it is also a chronicle of the events that would culminate in a landmark decision handed down by the California Supreme Court. Known simply as Tarasoff, this 1976 ruling would change the oath of confidentiality between therapist and patient, and establish the rule that a mental health professional has the legal duty to protect a threatened individual. Terrie and Doug Oxtal gave their lives to a dream. After over 35 years of marriage the result of their devotion to four children and each other, life was perfect until the day they left the hospital with only their youngest son Andrew's jacket. The unspeakable grief that took over their lives is captured in letters written to Andrew where the love spills on to every page. The journey is there, the love is there, the sense of loss is there between the lines of shock and pain, with a true understanding of compassion. The Oxtal family knows Andrew has gone home, and they live with him in their hearts, until they meet again. For those who have suffered the loss of a child, this mother's letters will take you to a place so familiar they won't make you feel alone. For those who have not lost a child, this book will take you to a place where love is all that matters.

This book benefited from the financial support of a French Government scholarship between 1976 and 1978. It sponsored a doctoral thesis in which initial theoretical, empirical, and historical reflections on accidents were developed and written while I was a student at the Ecole des Hautes Etudes en Sciences Sociales in Paris. The New Zealand Department of Labour funded a study on industrial accidents and night work during 1979-80. In 1982-83, the award of a postdoctoral fellowship by the University of Canterbury (New Zealand) permitted a first version of this book to be finished. In the summer of 1986-87 the Fundação de Amparo a Pesquisa do Estado de São Paulo (FAPESP) and the Laboratoire d'Ergonomie et de Neurophysiologie du Travail of the Centre National des Arts et Métiers joined forces to fund a stay in Paris where the second draft of this book was presented in a special doctoral seminar series. The third draft was completed during a 1988 research leave granted by the Conjunto de Ciência Política of the Universidade Estadual de Campinas (UNICAMP). On a further research leave from the same unit, and thanks to a postdoctoral fellowship from the Brazilian Conselho Nacional de Desenvolvimento Científico e Tecnológico (CNPq), final redrafting was carried out between August and October 1990 when I was a visiting fellow in the Science, Technology, and Society Program at Cornell University. I am deeply grateful to these institutions for their generosity.

Among the most important and influential philosophical works in Western thought: the dialogues entitled Euthyphro, Apology, Crito and Phaedo. Translations by distinguished classical scholar Benjamin Jowett.

Living in Death's Shadow is essential reading for everyone seeking to understand what it means to live with someone suffering from a chronic, fatal condition, including cancer, AIDS, Alzheimer's, and heart disease.

This book includes perspectives from a broad range of victims. including family members of the crime victims; convicted persons whose rights are violated by the justice system through wrongful convictions, unequal and discriminatory application of justice, lack of a due process, imposition for crimes that do not meet the most serious crimes threshold or to the categories of perpetrators that should be protected from the death penalty (minors, persons with mental or intellectual disabilities, pregnant women), as well as third parties including family members of the convicted person (especially children and primary caretakers) and persons included in criminal proceedings or executions (such as prosecutors, judges, lawyers and executioners). It is argued in this thought provoking book that the states right to execute violates the right to life and negatively reflects on human rights of its citizens in general.

The Trial and Death of Socrates

"More than a hundred people killed on a bright spring day. The city's most beautiful and iconic landmark in ruins. The man accused of setting the fire is dead, buried in the rubble along with answers to the question, "Why?" As Juni Bruder of the Orlando Herald talks to rescuers and survivors, she can't shake the feeling that something isn't right. The official story doesn't ring true. Her interviews become front-page news. So does her suicide, a year after the blaze. Her brother Peter, a Jesuit priest, finds a clean apartment and a stack of papers sealed in plastic bags. Sifting through his sister's effects, he reads the stories of the dead, from the architect who designed the famous building to the janitor blamed for destroying it. A file on Juni's laptop will reveal the hidden threads that bound the victims together, the seemingly random acts that brought them to a single place and moment in time. In the end, the answers Juni seeks won't be the ones she finds. Told through an inspired mix of puzzle pieces--news stories, phone transcripts, press releases--and filled with gallows humor, this is a novel about life, loss and the slippery nature of truth--Provided by the publisher.

Ever wondered why babies suck their fingers, or why humans have chins? Want to know how bad TV shows cause dementia, or find out why women groan during sex? Or are you curious about how the moon causes gout attacks, and how shaving increases the risk of cancer? Or would you just like to know the date you will die? Look no further than *Medical Hypotheses*. Over the years, hundreds of scientists, academics, doctors, and independent researchers, have come up with new answers, explanations and theories for almost everything, from AIDS and arthritis to vomiting and zinc. There are new theories to explain the Turin shroud, why religious revelations have always occurred on mountains, and why Queen Elizabeth I never married. If you're curious about health, science, and the world around and above you, read this book. Author Bio: Roger Dobson is an award-winning freelance journalist who contributes to a number of UK newspapers on health and Science, including the Daily Mail, The Times and the Sunday Times, and the Independent and Independent on Sunday, as well as the British Medical Journal. He and his family live in South Wales.

What happens to consciousness during the act of dying? The most compelling answers come from people who almost die and later recall events that occurred while lifesaving resuscitation, emergency care, or surgery was performed. These events are now called near-death experiences (NDEs). As medical and surgical skills improve, innovative procedures can bring back patients who have traveled farther on the path to death than at any other time in history. Physicians and healthcare professionals must learn how to appropriately treat patients who report an NDE. It is estimated that more than 10 million people in the United States have experienced an NDE. Hagan and the contributors to this volume engage in evidence-based research on near-death experiences and include physicians who themselves have undergone a near-death experience. This book establishes a new paradigm for NDEs.

A hospice doctor shares her own experience with near death and her work with the dying.
