Winner of an AJN Book of the Year Award! Designated a Doody's Core Title! "I have not seen a book that does a better job with synthesis or provision of good concise information to those in need." (3 Stars)--Doody's Book Review Service Wandering behaviors are among the most frequent, problematic, and dangerous conditions associated with dementia and a continual challenge in health care and the community. Strongly research-based, this book presents and analyzes the latest research on wandering from the clinical, health care management, and policy literature and offers practical assessment and management tools. Nurses, physicians, gerontologists and others address the range of wandering behaviors of patients with Alzheimer's and other dementias, including prevention of elopement, getting lost, falls, fractures, and the subsequent need for

extended nursing home or other supervised care that may result. The book places special emphasis on the difficult and stressful problems of daily patient care, improving safety for those with cognitive impairments, and enabling those with dementia to remain independent longer. This book is for all caregivers intent on improving care for the nearly 5 million Americans who are at risk. Key Features of this book: Offers practical tools for measuring and assessing wandering Emphasizes difficult and stressful daily problems of patient care Assesses medication and nonpharmacological interventions Describes the Alzheimer's Association's Safe ReturnÆ Program Weighs environmental design factors that influence wandering behaviors

Rehabilitation helps individuals maintain and optimize independence. Historically, people with dementia have received little rehabilitation and the focus has been on care to replace lost function. Dementia Rehabilitation is a resource for health and social professionals, service planners, policy makers, and academics. The book makes a compelling case for rehabilitation for people with dementia, including the views of people with dementia and the research evidence. For each area of function, the research evidence and relevant theory is summarized, followed by practical information on clinical assessment, and delivery of therapies. Identifies rehabilitation as a human right for people with dementia. Reviews functions affected by dementia, including cognition, communication, and physical function. Outlines evidence-based strategies to maintain function and to delay decline. Describes how to maintain activities of daily living and leisure activities. Includes techniques to maintain self-identity and mood. Recognizes the importance of environment and care partners in supporting rehabilitation. Summarizes models of care for rehabilitation.

The familiar image of the disabled tends to emphasize their limitations and reduced quality of life. However, many people with cognitive, motor, and other difficulties also have the capacity to enhance their social interactions, leisure pursuits and daily activities with the aid of assistive technology. Assistive devices from the simple to the sophisticated, have become essential to intervention programs for this population. And not surprisingly the numbers of devices available are growing steadily. Assistive Technologies for People with Diverse Abilities offers expert analysis of pertinent issues coupled with practical discussion of solutions for effective support. Its comprehensive literature review describes current and emerging devices and presents evidence-based guidelines for matching promising technologies to individuals. Program outcomes are assessed, as are their potential impact on the future of the field. In addition, chapters provide detailed descriptions of the personal and social needs of the widest range of individuals with congenital and acquired conditions, including: Acquired brain damage. Communication impairment. Attention and learning difficulties (with special focus on college students). Visual impairment and blindness. Autism spectrum disorders. Behavioral and occupational disorders. Alzheimer's disease. Severe, profound and multiple impairments. The scope and depth of coverage makes Assistive Technologies for People with Diverse Abilities an invaluable resource for researchers, professionals and graduate students in developmental psychology, rehabilitation medicine, educational technology, occupational therapy, speech pathology and clinical psychology.

The booming increase of the senior population has become a social phenomenon and a challenge to our societies, and technological advances have undoubtedly contributed to improve the lives of elderly citizens in numerous aspects. In current debates on technology, however, the »human factor« is often largely ignored. The ageing individual is rather seen as a malfunctioning machine whose deficiencies must be diagnosed or as a set of limitations to be overcome by means of technological devices. This volume aims at focusing on the perspective of human beings deriving from the development and use of technology: this change of perspective - taking the human being and not technology first - may help us to become more sensitive to the ambivalences involved in the interaction between humans and technology, as well as to adapt technologies to the people that created the need for its existence, thus contributing to improve the quality of life of senior citizens.

Excerpt from The Illinois-Iowa Jewish Community on the Banks of the Mississippi River The story that will be told has an important purpose. It will tell about the Jewish people in the l83o's, the earliest days of the Western frontier. We will try to discover what kind of Jews came to the frontier, why they came, how they lived as Jews, the institutions they created which would serve their needs, why they left their native lands, how their Jewish life developed and what they contributed to the growth of the cities in which they came to live as American Jews. The period to be covered begins about 1833 and will cover in detail the events until about 1925. It is the earliest period that is most valuable as the availability of the oldest record becomes more difficult each year. The data after 1900 are somewhat easier to obtain. A brief summary of communal developments from 1925 to 1950 will be included as a matter of interest for each community. Prolonged life expectancy along with the increasing complexity of medicine and health services raises health costs worldwide dramatically. Whilst the smart health concept has much potential to support the concept of the emerging P4-medicine (preventive, participatory, predictive, and personalized), such high-tech medicine produces large amounts of high-dimensional, weakly-structured data sets and massive amounts of unstructured information. All these technological approaches along with "big data" are turning the medical sciences into a data-intensive science. To keep pace with the growing amounts of complex data, smart hospital approaches are a commandment of the future, necessitating context aware computing along with advanced interaction paradigms in new physical-digital ecosystems. The very successful synergistic combination of methodologies and approaches from Human-Computer Interaction (HCI) and Knowledge Discovery and Data Mining (KDD) offers ideal conditions for the vision to support human intelligence with machine learning. The papers selected for this volume focus on hot topics in smart health; they discuss open problems and future challenges in order to provide a research agenda to stimulate further research and progress.

Understanding socially disruptive behavior in dementia is never easy. Most explanations offer neither solace nor solutions for families and carers, and treatment is often characterized by policies of control and containment. The result of Graham Stokes' 15 years of clinical work with people who are challenging, this book: disputes the traditional medical model of dementia and asserts that if we reach behind the barrier of cognitive devastation and decipher the cryptic messages, it can be shown that much behavior is not meaningless but meaningful. It contrasts the medical interpretation that sees anti-social behavior as mere symptoms of disease with a person-centered interpretation that resonates change and resolution. It offers a radical and innovative interpretation of challenging behavior consistent with the new culture of dementia care, focusing on needs to be met rather than problems to be managed.

In Aging, Autonomy, and Architecture, Benyamin Schwarz and Ruth Brent bring together many of the leading researchers and practitioners in the field to examine various aspects of the design and function of assisted living facilities. Concentrating on those characteristics that foster autonomy, the contributors offer case examples that bridge the gap between theory and practice. They comment on issues that include health care, the special needs of assisted living for persons with dementia, the importance of marketing and management, and the design of culturally sensitive facilities. The book will be a valuable resource for researchers, designers, and policy makers, as well as for students in gerontology and in architecture.

This book explores how human factors and ergonomic principles are currently transforming healthcare. It reports on the design of systems and devices to improve the quality, safety, efficiency and effectiveness of patient care, and discusses findings on improving organizational outcomes in the healthcare setting, as well as approaches to analyzing and modeling those work aspects that are unique to healthcare. Based on papers presented at the AHFE 2019 International Conference on Human Factors and Ergonomics in Healthcare and Medical Devices, held on July 24–28, 2019, in Washington, DC, USA, the book highlights the physical, cognitive and organizational aspects of human factors and ergonomic applications, and shares various perspectives, including those of clinicians, patients, health organizations, and insurance providers. Given its scope, the book offers a timely reference guide for researchers involved in the design of medical systems, and healthcare professionals managing healthcare settings, as well as healthcare counselors and international health organizations.

Wandering the Wards provides a detailed and unflinching ethnographic examination of life within the contemporary hospital. It reveals the institutional and ward cultures that inform the organisation and delivery of everyday care for one of the largest populations within them: people living with dementia who require urgent unscheduled hospital care. Drawing on five years of research embedded in acute wards in the UK, the authors follow people living with dementia through their admission, shadowing hospital staff as they interact with them during and across shifts. In a major contribution to the tradition of hospital ethnography, this book provides a valuable analysis of the organisation and delivery of routine care and everyday interactions at the bedside, which reveal the powerful continuities and durability of ward cultures of care and their impacts on people living with dementia.

This quick-reference tool has what you need to select the appropriate diagnosis to plan your patients' care effectively. The 14th Edition features all the latest nursing diagnoses and updated interventions.

The number of geriatric psychiatrists, specialty fellowships, and practices has been declining relative to the increase in the number of older adults in the United States; critical shortages in care are the new norm. Behavioral and Psychological Symptoms of Dementia was designed to address this predicament by enabling primary care providers to access a solid knowledge base and the clinical experience required to meet the needs of their patients with dementia. The author has written a concise yet comprehensive book that covers the full range of behavioral and psychological symptoms of dementia (BPSD) encountered by patients, families, caregivers, and primary care providers. In addition, the book provides the necessary foundation for distinguishing the different types of dementia, critical elements of patient history needed to develop an appropriate treatment approach, and the basic medical examinations and lab work that should be performed. Each chapter begins with a brief précis; well-written descriptions of the major topic follow. The chapters explore the common types of behavioral and emotional symptoms and the important associated system issues relevant to dementia care, including elder abuse reporting, creation of advance directives and power of attorney arrangements, safety planning, and caregiver support.The book's strengths are many * Carefully chosen, realistic case examples bring the material to life in a vivid, compelling way.* An up-to-date review of the literature is presented, striking an appropriate balance between new and promising findings and current standard-of-care practices. The book also identifies significant gaps in the literature.* Standard-of-care pharmacological and psychosocial approaches in the management of BPSD are offered with a realistic understanding of the benefits and difficulties of implementing each.* Relevant information on complementary medicine is included, and the book covers personality, cultural, and spiritual domains so that the reader is cognizant of the whole-person approach in delivering dementia care.* Each chapter includes key points for quick and easy reference and resources to share with patients, families, and caregivers -- a boon to the busy clinician. * Although intended as a practical guide for clinicians in a variety of fields, those in academia who specialize in geriatric medicine or psychiatry will find the book a useful way to organize and teach this material to students, residents, and fellows. Pragmatic and clinically oriented, Behavioral and Psychological Symptoms of Dementia will help primary care practitioners provide informed, compassionate care to older adults at risk for, or exhibiting, BPSD.

Given medical advances and greater understanding of healthful living habits, people are living longer lives. Proportionally speaking, a greater percentage of the population is elderly. Despite medical advances, there is still no cure for dementia, and as elderly individuals succumb to Alzheimer's Disease

or related dementia, more and more people are having to care their elderly parents and /or siblings. Profiles in Caregiving is practical source of information for anyone who teaches caregiving, acts as a caregiver, or studies caregiving. This book discusses recent research on stress factors associated with caregiving, and what factors impact on successful versus non-successful adaptation to the care-giving role. This is an expanding field in gerontology, and is also of interest to personality and social psychologists studying stress and interpersonal relations. Although there are many books on the cause and treatment of dementia, there has been a book that provides a research investigation into the factors associated with effective caregiving to dementia patients. Conceptualizes caregiving as a multistage career whose impact on the caregiver continues to be felt after in-home care has ceased Based upon a longitudinal survey of a demographically diverse sample of principal caregivers over a three-year period Identifies caregivers who are most at-risk for adverse adaptation to the role Describes preventative and clinical intervention strategies Identifies post-care risk and issues Identifies antecedents to successful adaptation State of the art analytic techniques Graphic presentation of empirical findings Renowned multidisciplinary research team

The quality and readiness of the health and social care estate is vital for high quality, safe and efficient health and social care. This HBN sets out the design guidance for dementia-friendly health and social care environments. The design principles and the core design features together with a selection of case studies provide guidance for the development of new design solutions and the adaptation/ extension of existing facilities. HBN 08-02 is intended particularly for those who are new to the topic and also for people living with dementia or their advocates who may be engaged as part of stakeholder engagement processes. It may also be helpful for commissioning organisations, auditors and regulators, giving an overall perspective of the dementia-friendly design issues that need to be addressed

With increasing urgency, decisions about the digitalized future of healthcare and implementations of new assistive technologies are becoming focal points of societal and scientific debates and addresses large audiences. Decisions require a careful weighing of risks and benefits and contextualizing in-depth ethical analysis with robust empirical data. However, up to now, research on social assistive technologies is mostly dispersed over different academic fields and disciplines. A comprehensive overview on discussions regarding values at stake and ethical assessment of recent developments especially in healthcare is largely missing. This publication initiates an interdisciplinary discourse on ethical, legal and social implications of socially assistive technologies in healthcare. Contributions include perspectives from nursing science, social sciences, philosophy, medical ethics, economics and law to present an – to our knowledge – first and comprehensive overview on different aspects of the use and implementation of socially assistive technologies from an ethical perspective. It combines practically relevant insights and examples from current research and development with ethical analysis to uncover exemplary moral tipping points between promotion of participation or well-being and risks and damages to these values. Healthcare professionals involved in implementation of smart technologies as well as scholars from the field of humanities, nursing and medicine, interested in the discussions on ethics and technology in healthcare, will benefit from this new contribution. The publication is part of the international DigitAs conference "Aging between Participation and Simulation – Ethical Dimensions of Socially Assistive Technologies" held at the Institute of Medical Ethics and History of Medicine (Ruhr University Bochum) from 4 February to 8 February 2019. Within this framework, twelve young scholars were invited to discuss their contributions with renowned experts in the field. The Institute of Medical Ethics and History of Medicine is one of the leading institutes in empirically informed ethical analysis in healthcare and medicine and is a member of the European Association of Centres of Medical Ethics (EACME).

2008 AJN Book of the Year Winner! Like its popular predecessor, the new edition of Bathing Without a Battle presents an individualized, problem-solving approach to bathing and personal care of individuals with dementia. On the basis of extensive original research and clinical experience, the editors have developed strategies and techniques that work in both institution and home settings. Their approach is also

appropriate for caregiving activities other than bathing, such as morning and evening care, and for frail elders not suffering from dementia. For this second edition, the authors have included historical material on bathing and substantially updated the section on special concerns, including: Pain Skin care Determining the appropriate level of assistance Transfers The environment An enhanced final section addresses ways to support caregivers by increasing their understanding of the care recipient's needs and their knowledge of interventions to improve care and comfort. It also emphasizes self-care and system-level changes to promote person-directed care. Several chapters include specific insights and wisdom from direct caregivers.

2010 AJN Book of the Year Award Winner in both Gerontologic Nursing and Hospice and Palliative Care! "This book...provides important information on best practices and appropriate ways to care for a person with Alzheimer's and advanced dementia. Drs. Martin and Sabbagh have assembled a team of experts to help craft recommendations that should ultimately become standards that all professional caregivers adopt." -Michael Reagan Son of former President Ronald Reagan President, Reagan Legacy Foundation This book testifies that caregivers can have a monumental impact on the lives of persons with advanced dementia. Through specialized programming and a renewed effort toward patient-centered care, caregivers can profoundly enrich the quality of life for these persons. Providing guidelines for health care professionals, caregivers, and family members, this book introduces palliative care programs and protocols for the treatment of people with advanced dementia. The book is designed to guide professional caregivers in meeting the needs of patients and their families, providing insight into the philosophy, assessment, planning, implementation, and evaluation measures involved in interdisciplinary palliative care. The chapter authors offer guidelines and standards of care based on contributions from nurses, physical therapists, social workers, dietitions, psychologists, family caregivers and pastors. This book addresses current issues in the neuroscience and ethics of dementia care, including philosophical as well as ethical legal, and social issues (ELSIs), issues in clinical, institutional, and private care-giving, and international perspectives on dementia and care innovations. As such, it is a must-read for anyone interested in a well-researched, thought-provoking overview of current issues in dementia diagnosis, care, and social and legal policy. All contributions reflect the latest neuroscientific research on dementia, either broadly construed or in terms of the etiologies and symptoms of particular forms of dementia. Given its interdisciplinary and international scope, its depth of research, and its qualitative emphasis, the book represents a valuable addition to the available literature on neuroethics, gerontology, and neuroscientific memory research.

Person-centered care for persons with dementia has been developed and expanded over the last few decades. Speech-language pathologists are uniquely positioned to understand the striking

impact that communication challenges have on persons with dementia and their caregivers, and can lead the charge to improve access to communication and participation. This volume serves as a starting point and reference manual for those who want to provide person-centered and life-enhancing services to persons with dementia, and to inspire the continued generation of quality research to demonstrate the value of cognitive-communication, behavioral, and caregiver interventions. It serves as a call to action for an interprofessional team of healthcare providers across healthcare settings to promote meaningful life engagement in persons with dementia using evidence-based assessment and intervention approaches. This volume provides background on the evolution of caring for persons with dementia, as well as a description of the diagnostic process for dementia syndromes and the cognitive and communication characteristics of dementias with an emphasis on Alzheimer's dementia. Its chapters cover the person-centered assessment process for persons with cognitive and communicative disorders of dementias; intervention approaches for the wide variety of cognitive, communicative, eating/swallowing, and behavioral symptoms and consequences of dementia syndromes; reimbursement and documentation issues for various settings in which persons with dementia are seen; and issues and challenges of quality of life and end-of-life care.
