This Commentary provides an article-by-article summary of the TEU, the TFEU, and the Charter of Fundamental Rights, offering a quick reference to the provisions of the Treaties and how they are interpreted and applied in practice. Written by a team of contributors drawn from the Legal Service of the European Commission and academia, the Commentary offers expert guidance to practitioners and academics seeking fast access to the Treaties and current practice. The Commentary follows a set structure, offering a short overview of the Article, the Article text itself, a key references list including essential case law and legislation, and a structured commentary on the

Article itself. The editors and contributors combine experience in practice with a strong academic background and have published widely on a variety of EU law subjects.

Although fictional characters have long dominated the reception of literature, films, television programs, comics, and other media products, only recently have they begun to attract their due attention in literary and media theory. The book systematically surveys today's diverse and at times conflicting theoretical perspectives on fictional character, spanning research on topics such as the differences between fictional characters and real persons, the ontological status of characters, the strategies of their representation and characterization, the psychology of their reception, as well as their specific forms and constellations in - and across - different media, from the

This open access book explores the global challenges and experiences related to digital entrepreneurial activities, using carefully selected examples from leading companies and economies that shape world business today and tomorrow. Digital entrepreneurship and the companies steering it have an enormous global impact; they promise to transform the business world and change the way we communicate with each other. These companies use digitalization and artificial intelligence to enhance the quality of decisions and augment their business and customer operations. This book demonstrates how cloud services are continuing to evolve; how cryptocurrencies are traded in the banking industry; how platforms are created to commercialize business, and how, taken together, these developments provide new opportunities in

the digitalized era. Further, it discusses a wide range of digital factors changing the way businesses operate, including artificial intelligence, chatbots, voice search, augmented and virtual reality, as well as cyber threats and data privacy management. “Digitalization mirrors the Industrial Revolution’s impact. This book provides a complement of perspectives on the opportunities emanating from such a deep seated change in our economy. It is a comprehensive collection of thought leadership mapped into a very useful framework. Scholars, digital entrepreneurs and practitioners will benefit from this timely work.” Gina O’Connor, Professor of Innovation Management at Babson College, USA “This book defines and delineates the requirements for companies to enable their businesses to succeed in a post-COVID19 world. Enough about the oil problem. Here's the solution. Over a few decades, starting now, a vibrant US economy (then others) can completely phase out oil. This will save a net \$70 billion a year, revitalize key industries and rural America, create a million jobs, and enhance security. Here's the roadmap ? independent, peer-reviewed, co-sponsored by the Pentagon ? for

the transition beyond oil, led by business and profit.

Being socially responsible on the part of corporate entities is now no longer an option, it is part of their normal business obligations to all their stakeholders regardless of whether these are primary or secondary stakeholders. Modern societies around the world now expect corporate entities of all shapes and forms to be socially responsible

in whatever they do; the "Global Practices of Corporate Social Responsibility" is a first attempt at bringing together in one book experts' accounts of how corporate entities in twenty independent nations around the world are dealing with the issue of CSR. The world today faces diverse social problems. These become apparent as one moves from one country to the next, interestingly, society now expects

corporations to help in finding solutions to these problems. The problem of global warming affects us all; modern corporations can no longer continue to assume that the problem will go away, if nothing is done by them. We can all make a little difference by our actions.

This investigation of child labor explores difficult conceptual and public policy issues. It demonstrates the sheer prevalence of the

commercial exploitation of child labor in both industrial and developing countries, and its rapid growth today under the twin pressures of mass poverty and the globalized marketplace for labor. In addition to its rich empirical material from countries in Asia, Latin America, Africa, and Europe, the author makes a clear distinction between the socialization of children through labor within the family and

their economic
exploitation for profit.
It also focuses on the
role of adults with
responsibility for
children, and the
specific form which
paternal domination
takes towards children.

Olivier Wieviorka's history of the French Resistance debunks lingering myths and offers fresh insight into social, political, and military aspects of its operation. He reveals not one but many interlocking homegrown groups often at odds over goals, methods, and leadership. Yet, despite a lack of unity, these fighters braved Nazism without blinking.

Some 20 years after writing *The Technological Society*, Jacques Ellul realized how

the totalistic dimensions of our modern technological milieu required an additional treatment of the topic.

Writing amidst the rise of books in the 1970s on pollution, over-population, and environmental degradation, Ellul found it necessary, once again, to write about the global presence of technology and its far-reaching effects. The Technological System represents a new stage in Ellul's research. Previously he studied technological society as such; in this book he approaches the topic

from a systems perspective wherein he identifies the characteristics of technological phenomena and technological progress in light of system theory. This leads to an entirely new approach to what constitutes the most important event of our society which has decisive bearing on the future of our world. Ellul's analysis touches on all aspects of modern life, not just those of a scientific or technological order. In the end, readers are compelled to formulate their own opinions and make their own

decisions regarding the way a technique-based value system affects every level of human life.

The book titled The Collaborative Economy in Action: European Perspectives is one of the important outcomes of the COST Action CA16121, From Sharing to Caring: Examining the Socio-Technical Aspects of the Collaborative Economy (short name: Sharing and Caring; sharingandcaring.eu) that was active between March 2017 and September 2021. The Action was funded by

the European Cooperation in Science and Technology - COST (www.cost.eu/actions/CA16121). The main objective of the COST Action Sharing and Caring is the development of a European network of researchers and practitioners interested in investigating the collaborative economy models, platforms, and their socio-technological implications. The network involves scholars, practitioners, communities, and policymakers. The COST Action Sharing and Caring helped to connect research

initiatives across Europe and enabled scientists to develop their ideas by collaborating with peers. This collaboration opportunity represented a boost for the participants' research, careers, and innovation potential. The main aim of this book is to provide a comprehensive overview of the collaborative economy (CE) in European countries with a variety of its aspects for a deeper understanding of the phenomenon as a whole. For this reason, in July 2017, an open call for country reports was distributed among the

members of the COST Action
Sharing and Caring.

Representatives of the
member countries were
invited to produce short
country reports covering:
definition(s) of the CE; types
and models of the CE; key
stakeholders involved; as
well as legislation and
technological tools relevant
for the CE. Submitted reports
varied in length and
regarding the level of detail
included, in accordance with
how much information was
available in each respective
country at the time of
writing. Editors of the book

have compiled these early reports into a summary report, which was intended as a first step in mapping the state of the CE in Europe.

The Member Countries Report on the Collaborative Economy, edited by Gaia Mosconi, Agnieszka Lukasiewicz, and Gabriela Avram (2018) that was published on the Sharing and Caring website, represented its first synergetic outcome and provided an overview of the CE phenomenon as interpreted and manifested in each of the countries part of the network. Additionally,

Sergio Nassare-Aznar, Kosjenka Dumančić, and Giulia Priora compiled a Preliminary Legal Analysis of Country Reports on Cases of Collaborative Economy (2018). In 2018, after undertaking an analysis of the previous reports' strengths and weaknesses, the book editors issued a call for an updated version of these country reports. Prof. Ann Light advised the editorial team, proposing a new format for country reports and 4000 words limit. The template included: Introduction, Definition, Key

Questions, Examples, Illustration, Context, Developments, Issues, Other Major Players, and Relevant Literature. The new template was approved by the Management Committee in October 2018. The task force that had supported the production of the first series of country reports (Dimitar Trajanov, Maria del Mar Alonso, Bálint Balázs, Kosjenka Dumančić, and Gabriela Avram) acted as mentors for the team of authors in each country. The final reports arrived at the end of 2018, bringing the

total number of submissions to 30 (twenty-nine European countries plus Georgia). A call for book editors was issued, and a new editorial team was formed by volunteers from the participants of the COST Action: Andrzej Klimczuk, Vida Česnuityte, Cristina Miguel, Santa Mijalche, Gabriela Avram, Bori Simonovits, Bálint Balázs, Kostas Stefanidis, and Rafael Laurenti. The editorial team organized the double-blind reviews of reports and communicated to the authors the requirements for

improving their texts. After reviews, the authors submitted updated versions of their country reports providing up-to-date interdisciplinary analysis on the state of the CE in 2019, when the reports were collected. During the final phase, the chapters were again reviewed by the lead editors together with all editorial team members. At the time, the intention was to update these reports again just before the end of the COST Action Sharing and Caring in 2021 and to produce a third edition.

However, the COVID-19 pandemic changed these plans. Thus, this final volume was created by 82 scholars-editors and contributors-and consists of reports on 27 countries participating in the COST Action.

**Controversy shrouds sharing
economy platforms. It stems
partially from the platforms'
economic impact, which is felt
most acutely in certain sectors:**

Uber drivers compete with taxi drivers; Airbnb hosts compete with hotels. Other consequences lie elsewhere: Uber is associated with a trend toward low-paying, precarious work, whereas Airbnb is accused of exacerbating real estate speculation and raising the cost of long-term rental housing. While governments in some jurisdictions have attempted to rein in the platforms, technology has enabled such companies to bypass conventional regulatory categories, generating accusations of “unfair competition” as well as debates about the merits of existing regulatory regimes. Indeed, the platforms blur a

number of familiar distinctions, including personal versus commercial activity; infrastructure versus content; contractual autonomy versus hierarchical control. These ambiguities can stymie legal regimes that rely on these distinctions as organizing principles, including those relating to labour, competition, tax, insurance, information, the prohibition of discrimination, as well as specialized sectoral regulation. This book is organized around five themes: technologies of regulation; regulating technology; the sites of regulation (local to global); regulating

markets; and regulating labour.

Together, the chapters offer a rich variety of insights on the regulation of the sharing economy, both in terms of the traditional areas of law they bring to bear, and the theoretical perspectives that inform their analysis. This book is published in English. - La controverse entoure les plateformes d'économie de partage, partiellement en raison de leur impact économique.

Certains secteurs subissent des contrecoups de manière plus aigüe : les chauffeurs d'Uber font concurrence aux chauffeurs de taxi, ou les hôtes Airbnb rivalisent avec les hôtels. Par ailleurs, Uber

exacerberait l'emploi précaire et mal rémunéré tandis qu'Airbnb amplifierait la spéculation immobilière et entraînerait, à terme, une hausse du coût de location. On a tenté de réglementer ce type de plateformes, mais la technologie est telle qu'elle permet aux entreprises d'aisément contourner la réglementation conventionnelle, si bien que les accusations de « concurrence déloyale » fusent de toutes parts, provoquant une remise en question du cadre réglementaire. En effet, de telles plateformes viennent brouiller les cartes, confondant les distinctions convenues entre personnel et

commercial, infrastructure et contenu, autonomie contractuelle et contrôle hiérarchique. Cette ambiguïté peut avoir d'importantes répercussions sur le bon fonctionnement de l'appareil réglementaire qui encadre les principes organisateurs du travail, de la concurrence, de l'impôt, de l'assurance, de l'information et de de l'interdiction de la discrimination, sans parler de la réglementation sectorielle spécialisée. Cinq thématiques sont abordées dans cet ouvrage : les technologies de la réglementation; la réglementation de la technologie; les lieux de la réglementation (du local au

mondial); la réglementation des marchés; et la réglementation du travail. Les chapitres se conjuguent pour offrir une réflexion d'une gamme d'experts sur la jurisprudence traditionnelle que sur les approches théoriques qui informent et façonnent la réglementation de l'économie du partage. In this thoroughly innovative work, Hans Ulrich Gumbrecht evokes the year 1926 through explorations of such things as bars, boxing, movie palaces, hunger artists, airplanes, hair gel, bullfighting, film stardom and dance crazes. From the vantage points of Berlin, Buenos Aires, and New York, the reader is allowed multiple itineraries, ultimately becoming immersed in the activities, entertainments, and thought patterns of the citizens of 1926.

In this major work, the sociologists Eve Chiapello and Luc Boltanski go

to the heart of the changes in contemporary business culture. Via an unprecedented analysis of the latest management texts that have formed the thinking of employers in their organization of business, the authors trace the contours of a new spirit of capitalism. They argue that from the middle of the 1970s onwards, capitalism abandoned the hierarchical Fordist work structure and developed a new network-based form of organization which was founded on employee initiative and autonomy in the workplace – a 'freedom' that came at the cost of material and psychological security. The authors connect this new spirit with the children of the libertarian

and romantic currents of the late 1960s (as epitomised by dressed-down, cool capitalists such as Bill Gates and 'Ben and Jerry') arguing that they practice a more successful and subtle form of exploitation. In a work that is already a classic in Europe, Boltanski and Chiapello show how the new spirit triumphed thanks to a remarkable recuperation of the Left's critique of the alienation of everyday life – a recuperation that simultaneously undermined the power of its social critique.

Law and the "Sharing Economy"

Probably the most prominent living filmmaker, and one of the foremost directors of the postwar era, Jean Luc-Godard has received astonishingly little critical attention in the United States. With Speaking about Godard, leading film theorist Kaja Silverman and filmmaker Harun Farocki have made one of the most significant contributions to

film studies in recent memory: a lively set of conversations about Godard and his major films, from Contempt to Passion. Combining the insights of a feminist film theorist with those of an avant-garde filmmaker, these eight dialogues—each representing a different period of Godard's film production, and together spanning his entire career—get at the very heart of his formal and theoretical innovations, teasing out, with probity and grace, the ways in which image and text inform one another throughout Godard's oeuvre. Indeed, the dialogic format here serves as the perfect means of capturing the rhythm of Godard's

ongoing conversation with his own medium, in addition to shedding light on how a critic and a director of films respectively interpret his work. As it takes us through Godard's films in real time, Speaking about Godard conveys the sense that we are at the movies with Silverman and Farocki, and that we, as both student and participant, are the ultimate beneficiaries of the performance of this critique. Accessible, informative, witty, and, most of all, entertaining, the conversations assembled here form a testament to the continuing power of Godard's work to spark intense debate, and reinvigorate the study of one of the great artists of our

The logic behind European monetary cooperation and integration can only be understood through an examination of French efforts to maximise their monetary power in relation to Germany and America. This book provides a detailed and historically-informed study of the motives and economic and political attitudes that shaped French policy on European developments over a thirty year period, from the collapse of the International Monetary System in the late 1960s and early 1970s through to the start of EMU on 1 January 1999.

This book provides a state-of-the-

art look at the applied biomechanics of accidental injury and prevention. The editors, Drs. Narayan Yoganandan, Alan M. Nahum and John W. Melvin are recognized international leaders and researchers in injury biomechanics, prevention and trauma medicine. They have assembled renowned researchers as authors for 29 chapters to cover individual aspects of human injury assessment and prevention. This third edition is thoroughly revised and expanded with new chapters in different fields. Topics covered address automotive, aviation, military and other environments. Field data collection; injury coding/scaling;

injury epidemiology; mechanisms of injury; human tolerance to injury; simulations using experimental, complex computational models (finite element modeling) and statistical processes; anthropomorphic test device design, development and validation for crashworthiness applications in topics cited above; and current regulations are covered. Risk functions and injury criteria for various body regions are included. Adult and pediatric populations are addressed. The exhaustive list of references in many areas along with the latest developments is valuable to all those involved or intend to pursue this important topic

on human injury biomechanics and prevention. The expanded edition will interest a variety of scholars and professionals including physicians, biomedical researchers in many disciplines, basic scientists, attorneys and jurists involved in accidental injury cases and governmental bodies. It is hoped that this book will foster multidisciplinary collaborations by medical and engineering researchers and academicians and practicing physicians for injury assessment and prevention and stimulate more applied research, education and training in the field of accidental-injury causation and prevention.

French books in print

Whatever happens tomorrow depends less on prevailing trends and more on individual and collective decisions taken in the face of these trends. If the future is indeed the fruit of human desire, then we have the power to change it to organizational or personal advantage. In *Creating Futures*, Michel Godet has collected an

impressive arsenal of the most effective methodologies for strategic planning. Godet maintains that with the right tools and attitudes, people can learn how to create futures. The book presents these planning methods with lively examples and illustrative and informative case studies. These include information technology in Europe, AXA Insurance, EDF (the French electrical utility), individual combat weapon (French military), and BASF and the agri-business environmental challenge. Creating Futures provides the tools managers, planners, and entrepreneurs need to anticipate change; avoid forecasting errors; avoid clichés and conventional thinking; and make sense of the concepts used in foresight,

scenario building and strategic planning.

Fashion law encompasses a wide variety of issues that concern an article of clothing or a fashion accessory, starting from the moment they are designed and following them through distribution and marketing phases, all the way until they reach the end-user.

Contract law, intellectual property, company law, tax law, international trade, and customs law are of fundamental importance in defining this new field of law that is gradually taking shape. This volume focuses on the new frontiers of fashion law, taking into account the various fields that have recently emerged as being of great interest for the entire fashion world: from sustainable fashion to

wearable technologies, from new remedies to cultural appropriation to the regulation of model weight, from advertising law on the digital market to the impact of new technologies on product distribution. The purpose is to stimulate discussion on contemporary problems that have the potential to define new boundaries of fashion law, such as the impact of the heightened ethical sensitivity of consumers (who increasingly require effective solutions), that a comparative law perspective renders more interesting. The volume seeks to sketch out the new legal fields in which the fashion industry is getting involved, identifying the new boundaries of fashion law that existing literature has not dealt with

in a comprehensive manner. Recently, rapid technological advances have been influencing the global business operations strategies at companies of all sizes like never before. At the same time, there has been a shift in business cultures due to the rising prevalence of matrix organizations and innovative thinking. This book investigates the role of these factors in shaping the business operations of tomorrow. To address the topic comprehensively, the editors have gathered expert contributions exploring the following dimensions: the business and organizational environment, strategic design, innovativeness and risk management. Discussing aspects ranging from customer selection to understanding

regional, national and supranational market dynamics, the contributions will help readers understand both the complexity of and opportunities presented by designing operations.

"Our understanding of how the human brain performs mathematical calculations is far from complete. In *The Number Sense*, Stanislas Dehaene offers readers an enlightening

exploration of the mathematical mind. Using research showing that human infants have a rudimentary number sense, Dehaene suggests that this sense is as basic as our perception of color, and that it is wired into the brain. But how then did we leap from this basic number ability to trigonometry, calculus, and beyond? Dehaene shows that it was the invention of symbolic systems of numerals that started us on the climb to higher mathematics. Tracing the history of numbers, we learn that in early times, people indicated numbers by pointing to part of their bodies, and how Roman numerals were replaced by modern numbers. On

the way, we also discover many fascinating facts: for example, because Chinese names for numbers are short, Chinese people can remember up to nine or ten digits at a time, while English-speaking people can only remember seven. A fascinating look at the crossroads where numbers and neurons intersect, *The Number Sense* offers an intriguing tour of how the structure of the brain shapes our mathematical abilities, and how math can open up a window on the human mind"--Provided by publisher. First published in 1984. Routledge is an imprint of Taylor & Francis, an informa company.

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile

sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.

Merging theory and practice into a comprehensive, highly-anticipated text Corporate Finance continues its legacy as one of the most popular financial textbooks, with well-established content from a diverse and highly respected author team. Unique in its features, this valuable text blends theory and practice with a direct, succinct style and commonsense presentation. Readers will be introduced to concepts in a situational framework,

followed by a detailed discussion of techniques and tools. This latest edition includes new information on venture finance and debt structuring, and has been updated throughout with the most recent statistical tables. The companion website provides statistics, graphs, charts, articles, computer models, and classroom tools, and the free monthly newsletter keeps readers up to date on the latest happenings in the field. The authors have generously made themselves available for questions, promising an answer in seventy-two hours. Emphasizing how key

concepts relate to real-world situations is what makes Corporate Finance a valuable reference with real relevance to the professional and student alike. Readers will gain insight into the methods and tools that shape the industry, allowing them to: Analyze investments with regard to hurdle rates, cash flows, side costs, and more Delve into the financing process and learn the tools and techniques of valuation Understand cash dividends and buybacks, spinoffs, and divestitures Explore the link between valuation and corporate finance As the global economy begins to recover, access to the

most current information and statistics will be required. To remain relevant in the evolving financial environment, practitioners will need a deep understanding of the mechanisms at work. Corporate Finance provides the expert guidance and detailed explanations for those requiring a strong foundational knowledge, as well as more advanced corporate finance professionals. The interrelations of science and technology as an object of study seem to have drawn the attention of a number of disciplines: the history of both science and technology,

sociology, economics and economic history, and even the philosophy of science. The question that comes to mind is whether the phenomenon itself is new or if advances in the disciplines involved account for this novel interest, or, in fact, if both are interconnected. When the editors set out to plan this volume, their more or less explicit conviction was that the relationship of science and technology did reveal a new configuration and that the disciplines concerned with its analysis failed at least in part to deal with the change because of conceptual and methodological preconceptions. To say this

does not imply a verdict on the insufficiency of one and the superiority of any other one disciplinary approach. Rather, the situation is much more complex. In economics, for example, the interest in the relationship between science and technology is deeply influenced by the theoretical problem of accounting for the factors of economic growth. The primary concern is with technology and the problem is whether the market induces technological advances or whether they induce new demands that explain the subsequent diffusion of new technologies. Science is generally considered to be an

exogenous factor not directly subject to market forces and, therefore, appears to be of no interest.

Parodies have been created throughout times and cultures. A glimpse at the general judicial latitude generally afforded to parodies, satires, caricatures, and pastiches demonstrates the social and cultural value of this particular form of artistic expression. With the advent of technologies and the evolution of copyright legislation, creative endeavours in the form of parody gathered a new youth but became unlawful. While copyright law grants exclusive rights to right-

holders, this right is not absolute. Legislation includes specific exceptions, which preclude right-holders from exercising their prerogatives in particular cases which foster creativity and cultural diversity within that society. The parody exception pertains to this ultimate objective by permitting users to reproduce copyright-protected materials for the purpose of parody. To understand the meaning and scope of the parody exception, this book examines and compares five jurisdictions which differ in their protection of parodies: France, Australia, Canada, the US and the United Kingdom.

This book is concerned with finding an appropriate balance between the protection awarded to right-holders and the public interest. This is achieved by analysing the parody exception to the economic rights of right-holders, the preservation of moral rights and the interaction of the parody exception with contract law. As parodies constitute an artistic expression protected under the right to freedom of expression, this book also considers the influence of freedom of expression on the interpretation of this specific copyright exception. Furthermore, this book aims

at providing guidance on how to resolve conflicts where fundamental rights are in conflict. This is the first book in English to offer an in-depth investigation into the parody exception in copyright law, and comments on industry practices linked to this form of creative endeavours.
