If I do not touch on something that you would like me to, please let me know. I am always creating guides, so I can add your requests into one!

Research Design for Social Work and the Human Services integrates a range of research techniques into a single epistemological framework and presents a balanced approach to the teaching of research methods in the "helping professions." Jeane W. Anastas begins with a discussion of the different philosophical perspectives within which social research occurs and continues with problem formulation, research design, and methodological issues influencing data collection, analysis, and dissemination. She presents both fixed (quantitative) and flexible (qualitative) methods of research, granting legitimacy, value, utility, and relevance to both styles of inquiry. Utilizing complete case studies to illustrate different methodological approaches, Research Design for Social Work and the Human Services integrates material on women and people of color, and draws attention to the ways racism, heterosexism, sexism, and classism influence the conceptualization and conduct of research. Anastas not only exposes these biases but also addresses the experiences, needs, and concerns of clients of both genders and different race/ethnicities, sexual orientations, cultures, and classes.

Human intelligence is sexually attractive, and strongly predicts the success of sexual relationships, but the behavioral sciences have usually ignored the interface between intelligence and mating. This is the first serious scholarly effort to explore that interface, by examining both universal and individual differences in human mating intelligence. Contributors include some of the most prominent evolutionary psychologists and

promising new researchers in human intelligence, social psychology, intimate relationships, and sexuality. David Buss' foreword and the opening chapter explore what 'mating intelligence' means, and why it is central to human cognition and sexuality. The book's six sections then examine (1) our mating mechanisms -- universal emotional and cognitive adaptations for mating intelligently -- that guide mate search, mate choice, and courtship; (2) how mating intelligence strategically guides our choice of mating tactics and partners given different relationship goals, personality traits, forms of deception, and the existence of children; (3) the genetic and psychiatric causes of individual differences in mating intelligence; (4) how we use mental fitness indicators -- forms of human intelligence such as creativity, humor, and emotional intelligence -- to attract and retain sexual partners; (5) the ecological and social contexts of mating intelligence; (6) integrative models of mating intelligence that can guide future research. Mating Intelligence is intended for researchers, advanced students, and courses in human sexuality, intimate relationships, intelligence research, behavior genetics, and evolutionary, personality, social, and clinical psychology.

Let me remind you that the iPhone 11 was introduced back in September 2019 and the Galaxy S11 would again feel a bit late. In addition, in the new line, for the first time since the announcement of the Galaxy S6 Edge in 2015, Samsung

has changed a key design element of its flagships, almost completely eliminating the curved display edges. Samsung Galaxy S20 became the first smartphone in the S-line, which lost the 3.5 mm jack, but received support for eSIM (built-in SIM card). Also, for the first time in many years, the company changed the matrix of its cameras to a new sensor from Sony - the IMX555 model. And, of course, this is the first time a new display with a refresh rate of 120 Hz is used. I disagree with those who don't see much change in the Galaxy S20 over previous models. These differences exist and they are quite serious. Rather, the question is different - isn't the new model a "step forward and two steps back"? ideas). Only to a limited degree does the Greek "system" appear to adversely affect the acquisition and assimilation of the academy's value priorities; i.e., students as a whole, Greek and Independent alike, appear to become more independent, liberal, socially concerned, and culturally sophisticated by graduation. However, the Greek system's effect on the behavior of Greeks is more troubling, an effect largely mediated by the use and abuse of alcohol and the relative absence of direct institutional supervision. Assuming the retention of the Greek system, then, the promotion of the academy's agenda appears dependent on (a) an understanding and accommodation of the personal characteristics of Greeks, using appropriate pedagogical methods to advance the academy's educational objectives, and (b) both educational and administrative/regulatory efforts to control the use and abuse of alcohol. With or without the Greek system, the advancement of the academy's agenda involves these considerations, since the characteristics of students as a whole encompass the characteristics emphasized among Greeks.
