For centuries the "treatment" of mentally disturbed individuals was quite simple. They were accused of collusion with evil spirits, hunted, and persecuted. The last "witch" was killed as late as 1782 in Switzerland. Mentally disturbed people did not fare much better even when the witchhunting days were gone. John Christian Reil gave the following description of mental patients at the crossroads of the fifteenth and sixteenth centuries: We incarcerate these miserable

creatures as if they were criminals in abandoned jails, near to the lairs of owls in barren canyons beyond the city gates, or in damp dungeons of prisons, where never a pitying look of a humanitarian penetrates; and we let them, in chains, rot in their own excrement. Their fetters have eaten off the flesh of their bones, and their emaciated pale faces look expectantly toward the graves which will end their misery and cover up our shamefulnes. (1803) The great reforms introduced by Philippe Pinel at Bicetre in 1793

augured the beginning of a new approach. Pinel ascribed the "sick role," and called for compassion and help. One does not need to know much about those he wants to hurt, but one must know a lot in order to help. Pinel's reform was followed by a rapid development in research of causes, symptoms, and remedies of mental disorders. There are two main prerequisites for planning a treatment strategy.

von Bracken, with contributions by twenty-two psychologists from nine different countries, I described it as "a real landmark in international cooperation among psychologists." All of us connected with the International Union of Scientific Psychology were delighted with this tangible expression of increased communication among psychologists, who too often remain content to read the writings of their own countrymen in their own language. Our pleasure was increased with the publication of the volume in German as well, thus widening even more the circle of international contact; The favorable reception accorded the first Perspectives was convincing proof that such publications met a real need in the psychological community, and the hope was expressed on many sides that what had succeeded so well

would establish a precedent for the future. After all, psychologists are not usually content with just a single case! It is therefore with even greater pleasure and pride that, in the name of the International Union of Scientific Psychology, I write these few words of introduction to the second volume. Perspectives in Personality Research, again edited by Henry P. David, this time in cooperation with J.C. personality assessment. Organized for easy reference, the book is divided into four parts. Part I summarizes basic theories, issues, and concepts, setting forth a framework for assessment as a hypothesis-generating, problem-solving process. Part II describes and evaluates a wide range of relevant approaches, tests, and techniques, marshaling the available data and reviewing administration procedures, scoring, and interpretation. In Part III, the process by which personality assessment is translated into effective intervention strategies and programs for children is examined in depth. A summary of major perspectives and recommended practices is presented in Part IV, which also considers future needs and directions for the field.

This comprehensive, balanced guide to personality assessment,
