The third edition of Safe Handling of Hazardous Drugs provides nurses with the latest details and procedures needed to keep safe in the workplace. You'll find new chapters on post-administration issues, linen handling, disposal of hazardous drugs and hazardous drug waste, and the hazardous drug handling policy landscape. In addition to these new sections, each chapter includes key points to help highlight the most important information for nurses dealing with hazardous drugs.

Problem: Safety concerns have existed for

more than 40 years about how hazardous drug (HD) exposure contributes to long- and short-term adverse health outcomes for healthcare workers (HCWs). Careless handling may cause toxic residues to infiltrate hospital environments and patient care areas, and can even be traced to patients' homes. New government regulations will require healthcare organizations to minimize exposure risks to HCWs by fully implementing the U.S. Pharmacopeia (USP) Convention Chapter 800: Hazardous Drugs: Handling in Healthcare Settings (USP, 2016) on December 1, 2019. According to Polovich and Olsen (2017), "The

implementation of the USP 800 Standards will represent an important step forward for nurses and other potentially exposed HCWs".

Context: The proposed Doctor of Nursing Practice (DNP) project will implement an HD safe-handling personal protective equipment (PPE) toolkit at an ambulatory cancer infusion center to improve nurses' adherence with the USP 800 Standards and hospital policies addressing PPE use when handling, administering, and disposing of HD.

Proposed Interventions: Interventions for this project will consist of (a) an HD safe-handling PPE toolkit for infusion nurses, (b) a PPE

observation tool, (c) an expert panel discussion, (d) a nurses' skills session, (e) safe-handling adherence between observation and self-assessment survey, (f) hazardous drug administration safe handling peer-to-peer checklist, and (g) a performance dashboard to display progress. Proposed Outcome Measures: Outcome measures include (a) 90% or higher compliance rates with PPE use and (b) sustained adherence to USP 800 Standards and hospital policies for safe HD handling to 100% by February 2020.

forward to protect nurses and other potentially exposed healthcare workers (HCWs): (p.1). Context: The Doctor of Nursing Practice (DNP) project implemented a hazardous drug (HD) safe-handling personal protective equipment (PPE) toolkit in accordance to USP 800 standards and hospital policies at an ambulatory cancer infusion center to improve nurses' adherence with PPE use.

Interventions: The project consisted of (a) a safe-handling PPE toolkit, (b) a PPE observation tool, (c) an expert panel discussion, (d) a nurses' skills session, (e) an online safe-handling survey, (f) an HD safe-handling checklist, and (g) a performance dashboard. Measures: Outcome measures included a (a) 90% or higher compliance rate with PPE use during hazardous drug

administration and (b) sustained adherence to USP 800 standards and hospital policies by February 1, 2020.

Results: A 90% compliance rate for PPE use during hazardous drug administration was achieved by February 1, 2020. Sustainability is at risk due to the COVID-19 pandemic and global PPE shortages, however, nurses were able to adapt to new processes to conserve vital resources and will be reassessed in six months.

Conclusions: A systems-thinking approach to the implementation of USP800 was successful in improving compliance and adherence to PPE use among ambulatory care infusion nurses.
