This research compared the effectiveness of three different consumer media of instruction on warning and safety

effectiveness. The three methods of instruction were designed for an electric-powered leaf blower and included the traditional written owner's manual, an audio-cassette tape, and videotape. The subjects were told that this

was an experiment to test different types of instructions for operations, maintenance, assembly, and safety procedures of the leaf blower. Each group was tested for compliance to warnings, knowledge of

warnings, and perception of danger when using a leaf blower. The results showed that subjects from the Video and Audio conditions scored significantly higher on a test for knowledge of safety than those with the written
