With Saladin, students engage in the story of anatomy and physiology. Memorable stories must be effective in multiple ways. The story must paint a strong visual picture. The story must weave in tools to make the reader remember important events and understand their impact. Ken Saladin weaves graceful descriptions of human anatomy and physiology processes together with carefully selected clinical applications and fascinating stories from the history of medicine and evolutionary medicine to create a multi-layered story about the human body. A consistent set of chapter learning tools helps students identify and retain key concepts while the stunning visual program provides a realistic view of body structures and processes. The sixth edition is further improved by a complete integration of the text with extensive digital teaching and learning tools. Saladin's text requires no prior knowledge of college chemistry or cell biology, and is designed for a two-semester A&P course.

Coleen Belk and Virginia Borden Maier have helped students demystify biology for nearly twenty years in the classroom and nearly ten years with their book, Biology: Science for Life with Physiology. In the new Fourth Edition, they continue to use stories and current issues, such as discussion of cancer to teach cell division, to connect biology to student's lives. Learning Outcomes are new to this edition and integrated within the book to help professors guide students' reading and to help students assess their understanding of biology. A new Chapter 3, "Is It Possible to Supplement Your Way to Better Health? Nutrients and Membrane Transport," offers an engaging storyline and focused coverage on micro- and macro-nutrients, antioxidants, passive and active transport, and exocytosis and endocytosis.
