The recipient of much praise and acclaim, *Veterinary Parasitology* is widely considered to be the definitive veterinary parasitology reference for practitioners and students alike. This Fourth Edition has been developed and enhanced into a two-part reference to reflect recent advances in the field, modern teaching practice, and updated parasite taxonomic classification systems. Part One contains expanded individual parasite descriptions using current taxonomic status within three new chapters on Helminthology, Protozoology and Entomology. Further updated chapters are provided on: The laboratory diagnosis of parasitism, Antiparasitics, The epidemiology of parasitic diseases, and Host resistance to parasitic diseases. Host species chapters have been retained and expanded and are found in Part Two of the edition. KEY FEATURES Tailored for those directly involved in the diagnosis, treatment and control of parasitic diseases of domestic animals Compatible with the diversity of current parasitology teaching modules – both for teaching parasite systematics and diseases on a host-organ basis Offers the most detailed parasite descriptions available today for teachers, research groups, veterinarians in practice and in government service, and others involved in aspects of parasitic disease Thoroughly revised and restructured to reflect the most up-to-date advancements in the field, *Veterinary Parasitology*, Fourth Edition, enhances its stellar reputation as the gold standard reference text for the global veterinary profession.

In 1956, Palazzo Strozzi hosted the exhibition Pontormo and Early Florentine Mannerism, in which Pontormo’s work was displayed alongside that of Rosso Fiorentino, Beccafumi and other adepts of the new and unconventional trend in painting. Almost sixty years later, Palazzo Strozzi has decided to hold an exhibition devoted to only two of that movement’s leading lights, Pontormo and Rosso Fiorentino. They were both born in 1494, at the close of a century which had seen the collapse of a political balance that has guaranteed the prosperity and security of Florence and of Italy as a whole, and at the start of a troubled era of religious and political unrest that was to lead to a definitive alteration of the political balances among states, and to the loss of the harmony and balance in art that had been such a feature of the transition from the 15th to the 16th century. In exploring the work of the two greatest Florentine exponents of what 20th-century critics christened Mannerism, the exhibition, and this accompanying volume, aims to track the chronological development of the movement. With essays by Philippe Costamagna, Elizabeth Cropper, Carlo Falciani, Massimo Firpo, Tommaso Mozatti, Antonio Natali, Alessandro Nova, Massimiliano Rossi, and with entries byGrazia Badino, Andrea Baldinotti, Elena Capretti, Philippe Costamagna, Francesca De Luca, Carlo Falciani, Giovanni Maria Fara, David Franklin, Cristina Gelli, Antonio Geremica, Giovanna Giusti, Sefy Hendler, Andrea Muzzi, Carol Piazzotta.

The European Union and the single currency have given Europe more stability than it has known in the past thousand years, yet Europe seems to be in perpetual crisis about its global role. The many European empires are now reduced to a multiplicity of ethnicities, traditions, and civilizations. Europe will never be One, but to survive as a union it will have to become a federation of “ islands ” both distinct and connected. Though drawing on philosophers of Europe ’ s past, Cacciari calls not to resist Europe ’ s sunset but to embrace it. Europe will have to open up to the possibility that in few generations new exiles and an unpredictable cultural hybridism will again change all we know about the European legacy. Though scarcely alive in today ’ s politics, the political unity of Europe is still a necessity, however impossible it seems to achieve.

This is a book for anyone affected by another person’s cancer. It deals with practical and emotional issues that arise on the journey.

Presents the life and accomplishments of the renowned physicist, discussing his theory of relativity and the ways in which it transformed the world’s understanding about how the universe works.

This book provides an account of the development of European culture and society during the Bronze Age, the time span between c. 2000 and 700 BC. It was a period of remarkable innovation, seen for instance in the development and growth of metallurgy as a major industry, the spread of trading contacts, the origins of urbanism and the beginnings of social stratification. The study is divided chronologically into two, the earlier and later Bronze Age, giving a clear picture of the nature of the radical changes which occurred in the period as a whole. The geographical area covered, from the Atlantic shores across Europe into the Soviet Union and from northern Scandinavia to the Mediterranean, is too vast to be taken as one unit, and has been broken down into five regions; each is discussed in terms of settlement form, burial practices, ritual and religious sites, material culture, economic and social background, and trading patterns. The book describes and develops common themes that link together the different areas and cultural groups, rather than taking the typographical approach often adopted by Bronze Age specialists, and uses the results of radiocarbon dating to establish an objective chronology for the period. The text is generously illustrated and fully documented with radiocarbon dating tables and extensive bibliography. Our understanding of Bronze Age Europe is still increasing, but no other book of this scope had been written before this, in 1979. It is a major study of its time of interest to anyone looking beyond popular accounts of the day.

The metaphor of marriage often describes the relationship between poetry and music in both medieval and modern writing. While the troubadours stand out for their tendency to blur the distinction between speaking and singing, between poetry and song, a certain degree of semantic slippage extends into the realm of Italian literature through the use of genre names like canzone, sonetto, and ballata. Yet, paradoxically, scholars have traditionally identified a ‘divorce’ between music and poetry as the defining feature of early Italian lyric. Senza Vestimenta reintegrates poetic and musical traditions in late medieval Italy through a fresh evaluation of more than fifty literary sources transmitting Trecento song texts. These manuscripts have been long noted by musicologists, but until now they have been used to bolster rather than to debunk the notion that so-called ‘poesia per musica’ was relegated to the margins of poetic production. Jennings revises this view by exploring how scribes and readers interacted with song as a fundamentally interdisciplinary art form within a broad range of literary settings. Her study sheds light on the broader cultural world surrounding the reception of the Italian ars nova repertoire by uncovering new, diverse readers ranging from wealthy merchants to modest artisans. Vernacular architecture represents a great resource that has considerable potential to define principles for sustainable design and contemporary architecture. This publication is the result of an overall aim to produce a valuable tool for analysis regarding vernacular heritage through different assessments, in order to define principles to consider for sustainable development. This was possible through a comprehensive reflection on the principles established and the strategies to recognise in different world contexts. The present publication was the result of an in-depth approach by 46 authors from 12 countries, concerned with the analysis and critical assessment of vernacular heritage and its sustainable perspective. The book presents 8 chapters addressing operational definitions and synopses advances, regarding the main areas of vernacular heritage contribution to sustainable architecture. It also presents 15 chapters and 53 case studies of vernacular and contemporary approaches in all the 5 continents, regarding urban, architectural, technical and constructive strategies and solutions. VERSUS, HERITAGE FOR TOMORROW: Vernacular Knowledge for Sustainable Architecture is the result of a common effort undertaken by the partners ESG | Escola Superior Gallaecia, Portugal, as Project leader; CRAterre | École Nationale Supérieure d’Architecture de Grenoble, France; DIDA | Università degli Studi di Firenze, Italy; DICAAR | Università degli Studi di Cagliari, Italy; and UPV | Universitat Politècnica de València, Spain. The success of Orlando furioso in Italian musical theatre is vast and complex. This book examines the main phases of the circulation and influence of Orlando furioso on the seventeenth-century music scene by reconstructing an overall historical and critical profile, but also through the recovery and philologically verified transcription of about forty dramatic texts derived from Ariosto’s main narrative currents.

This book is a pioneering attempt to explore the fascinating and hardly known realm of reciting poetry in medieval and Renaissance Italy. The study of more than 50 treatises on both music and poetry, as well as other literary sources and documents from the period between 1300 and 1600, highlights above all the practice of *parlar cantando* («speaking through singings» – the term found in De li contrasti, a fourteenth-century treatise on poetry) as rooted in the art of reciting verses. Situating the practice of *parlar cantando* in the context of late medieval poetic delivery, the author sheds new light on the origin and history of late Renaissance opera style, which their inventors called *stile recitativo*, *rappresentativo* or, exactly, *parlar cantando*. The deepest roots of the Italian tradition of *parlar cantando* are thus revealed, and the cultural background of the birth of opera is reinterpreted and revisited from the much broader perspective of what appears to be the most important Italian mode of music making between the age of Dante and Petrarch and the beginning of Italian opera around 1600.

The help of leading Quality Assurance (QA) and Quality Control (QC) microbiology specialists in Europe, a complete set of guidelines on how to start and implement a quality system in a microbiological laboratory has been prepared, supported by the European Commission through the Measurement and Testing Programme. The working group included food and water microbiologists from various testing laboratories, universities and industry, as well as statisticians and QA and QC specialists in chemistry. This book contains the outcome of their work. It has been written with the express objective of using simple but accurate wording so as to be accessible to all microbiology laboratory staff. To facilitate reading, the more specialized items, in particular some statistical treatments, have been added as an annex to the book. All QA and QC tools mentioned within these guidelines have been developed and applied by the authors in their own laboratories. All aspects dealing with reference materials and interlaboratory studies have been taken in a large part from the projects conducted within the BCR and Measurement and Testing Programmes of the European Commission. With so many different quality control procedures, their introduction in a laboratory would appear to be a formidable task. The authors recognize that each laboratory manager will choose the most appropriate procedures, depending on the type and size of the laboratory in question. Accreditation bodies will not expect the introduction of all measures, only those that are appropriate for a particular laboratory. Features of this book:
• Gives all quality assurance and control measures to be taken, from sampling to expression of results
• Provides practical aspects of quality control to be applied both for the analyst and top management
• Describes the use of reference materials for statistical control of methods and use of certified reference materials (including statistical tools).

Promises and Perils

Of innocence and corruption in Pakistan is ‘a beautiful, often painful, journey of a young man’s doomed yearning for love’ (The Guardian). During a village wedding in Pakistan, a boy risks speaking to the beautiful daughter of a powerful local politician. As night falls, the two meet in his father’s orchard, inadvertently falling asleep as they wait for the light of day by their innocent mistake. As first light approaches, and the girl’s father realizes the young couple’s mutual attraction, he has the boy sent to prison without explanation or the benefit of a trial. Fifteen years later, the boy—now a man—is released without a word. Bereft of family and weakened from years of abuse, he collapses on the side of the road and is taken to a walk to his father’s now abandoned orchard, where he last saw his young beloved among the trees, beneath soaring, fluttering swallows. . . . In clear, crystalline prose, this novel reveals the ability of the human spirit to conquer the random cruelties of life, and how the power of love and hope, once known, can never truly be extinguished. ‘Hobbs’ prose is spare, clear, and powerful. . . . The novel is a masterpiece of understatement, and the ending is a triumph.’ —The New York Times However, the markers of the Afghan war and the changes in the landscape remind the reader that this story is very contemporary. ‘—Booklist ‘A perfectly cut jewel of a book.’ —The Financial Times

This is a comparative study of how the societies of late-medieval England and France reacted to the long period of conflict between them commonly known as the Hundred Years War. Beginning with an analysis of contemporary views regarding the war. Two chapters follow which describe the military aim of the protagonists, military and naval organisation, recruitment, and the impact of the war on the home front. The final chapter analyses some of the main social and economic effects of war upon society, the growth of a sense of national consciousness in time of conflict, and the social criticism which came from those who reacted to changes and development brought about by war. Although intended primarily as a textbook for students, Dr Allmand’s study is much more than that. It makes a valuable contribution to the history of the Hundred Years War, and opens up new and original perspectives on a familiar topic.

This book represents the first serious attempt to explain the fundamental basis of ozonotherapy and is a relevant step towards achieving further progress. Ozone is now considered a real drug and, after reacting with body fluids, releases messengers and activates several mechanisms which are able to elicit multiple biological effects. The therapeutic window has been defined and the safety of ozonotherapy has been demonstrated. The book deals with the use of ozone in different clinical situations and provides a comprehensive overview of the current state of the art. The book is a valuable reference for all those who are interested in ozone therapy and its applications in different clinical situations. deal with it’, it has been shown that ozone toxicity can be tamed and even totally avoided. New powerful methodologies have been devised and astonishing clinical results in vascular and infectious diseases have already been achieved. An exciting novelty is the induction of an adaptive response that implies the unsuspected possibility of arresting cell degeneration of controlled clinical studies need to be performed to fully exploit ozone’s therapeutic potentials and to establish the real validity of this therapy. Authoritative scientists and clinicians should abandon their prejudice and consider the profound difference between endogenous oxidative stress and the new concept of ozonotherapeutic ‘shock’. If this happens, we could solve the problem of oxidative stress in a much simpler and more effective way.

Winner, category of Architecture and Urban Studies in the 1991 Professional/Scholarly Publishing Annual Awards Competition presented by the Association of American Publishers, Inc. and Winner, Alice Davis Hitchcock Award, Society of Architectural Historians. Richard Etlin’s sweeping, generously illustrated study explores the changing idea of modernism in Italian architecture over the five crucial decades that saw the birth and crystallization of modern architecture. Systematically treating the major architects and movements of the period—such as Raimondo D’Aronco and Art Nouveau, Antonio Sant’Eia and Futurism, Marcello Piacentini and the modern vernacular, Giovanni Muzio and the Novecento, Giuseppe Terragni and Italian Rationalism—this book also explores the ways in which the original ideals of the various movements were transformed by working for the Fascist state. Modernism in Italian Architecture examines the legacy of the romantic revolution, which confronted architects with the dilemma of how to create an architecture that was both modern and national. It challenges accepted opinion on a variety of issues. Etlin argues against too close an association of Sant’Eia’s architecture and manifesto with Futurism by demonstrating a broader context for its themes. His study of Novecento architecture chronicles a movement whose use of classical detailing created a ‘postmodernism’ contemporaneous with the pioneering buildings of the International Style elsewhere in Europe and preceding its arrival in Italy. Etlin undermines the notion that the architects of Italian Rationalism blindly followed an antihistorical credo, by bringing to light the profoundly contextual nature of the abstract geometries of the best Rationalist architecture. The final section, devoted to Fascism, focuses on Terragni’s famous Casa del Fascio in Como and the Danterlurn project by Terragni and Lingieri. Etlin concludes with a consideration of the anti-Semitic attacks on modern architecture during the Fascist racial campaign of 1938. Richard Etlin is Professor in the School of Architecture at the University of Maryland.

Examining Bernini’s works from 1655 on, from Paris and Rome, this book demonstrates the wealth of material still to be drawn from close visual and material examination, archival research, and comparative textual analysis. On the whole, this collection deals with Bernini’s position as the leading creator of portraits - in oils, marble, monumental architecture, and metaphor - of some of the most powerful political players of his day. These studies speak to the growing distance of Gallic absolutism from the fading dreams of papal hegemony over Europe, and to the complexities of Bernini’s role as mouthpiece, obstacle, and flatterer of the Princes of the Papal States.

Considered an essential conservation tool, plant reintroductions have been conducted for many of the world’s rarest plant species. The expertise and knowledge gained through these efforts constitutes an essential storehouse of information for conservationists faced with a rapidly changing global climate. This volume presents a comprehensive review of reintroduction projects and practices, the circumstances of their success or failures, lessons learned, and the potential role for reintroductions

in preserving species threatened by climate change. Contributors examine current plant reintroduction practices, from selecting appropriate source material and recipient sites to assessing population demography. The findings culminate in a set of Best Reintroduction Practice Guidelines, included in an appendix. These guidelines cover stages from planning and implementation to long-term monitoring, and offer not only recommended actions but also checklists of questions to consider that are applicable to projects around the world. Traditional reintroduction practice can inform managed relocation—the deliberate movement of species outside their native range—which may be the only hope for some species to persist in a natural environment. Included in the book are discussions of the history, fears, and controversy regarding managed relocation, along with protocols for evaluating invasive risk and proposals for conducting managed relocation of rare plants. Plant Reintroduction in a Changing Climate is a comprehensive and accessible reference for practitioners to use in planning and executing rare plant reintroductions.

Flow Cytometry, Second Edition is a complete and comprehensive two-volume laboratory guide and reference for the use of the most current methods in flow cytometry sample preparation and analysis. These essential techniques are described in a step-by-step format, supplemented by explanatory sections and trouble-shooting tips. The methods are accessible to all researchers and students in biomedical science and biology who use fluorescence activated cell sorting (FACS). *Key Features*
• Completely revised and greatly expanded since the publication of the First Edition in 1990
• Unique comprehensive methodological coverage
• In-depth treatment of procedures, including:
• Theoretical foundations
• Critical aspects
• Possible pitfalls
• Written by authors with extensive experience who developed or modified the techniques
• Methods cover cell death and cell cycle analyses
• Practical, handbook-style presentation works in lab and in the classroom
• Color plates illustrate technique

Combining close textual readings with a broad theoretical perspective, Gender, Narrative, and Dissonance in the Modern Italian Novel is a study of the ways in which gender shapes the principal characters and narratives of seven important Italian novels of the nineteenth and twentieth centuries, from Alessandro Manzoni’s I promessi sposi (1827) to Elsa Morante’s Araucoli (1982). Silvia Valisa’s innovative approach focuses on the tensions between the characters and the gender ideologies that surround them, and the ways in which this dissonance exposes the ideological and epistemological structures of the modern novel. A provocative account of the intersection between gender, narrative, and epistemology that draws on the work of Georg Lukács, Barbara Spackman, and Teresa de Lauretis, this volume offers an intriguing new approach to investigating the nature of fiction.

The information presented includes data on B cell subset identification and development, antibody repertoire selection, tolerance induction, and antigen presentation. Each of these has a significant impact on the generation of autoantibodies and the development of autoimmune disease. A multidisciplinary discussion of the basic and clinical aspects of B cell function and autoimmunity is provided.

Part of a new series Legends from the Ancient North, The Elder Edda is one of the classic books that influenced J.R.R Tolkien’s The Hobbit and The Lord of the Rings ‘So the company of men led a careless life. All was well with them: until One began To encompass evil, an enemy from hell. Grendel they called this cruel spirit...’ J.R.R. Tolkien spent much of his life studying, translating and teaching the great epic stories of northern Europe, filled with heroes, dragons, trolls, dwarves and magic. He was hugely influential for his advocacy of Beowulf as a great work of literature and, even if he had never written The Hobbit and The Lord of the Rings, would be recognised today as a significant figure in the rediscovery of these extraordinary tales. Legends from the Ancient North brings together from Penguin Classics five of the key works behind Tolkien’s fiction: They are startling, brutal, strange pieces of writing, with an elemental power brilliantly preserved in these translations. They plunge the reader into a world of treachery, quests, chivalry, trials of strength.They are the most ancient narratives that exist from northern Europe and bring us as near as we will ever get to the origins of the magical landscape of Middle-earth (Midgard) which Tolkien remade in the 20th century.

Published to accompany the first large-scale retrospective of Alighiero Boetti’s work outside Italy in over a decade, this volume presents the most comprehensive overview of the artist’s career to date. Covering all periods of Boetti’s broad oeuvre—including early sculptural experiments associated with the Arte Povera movement, conceptual and ephemeral projects of the 1970s and the monumental embroideries and tapestries he fabricated up to his death—this richly illustrated catalogue is structured as a typology of the artist’s body of work rather than a chronological progression. Essays by curators from the Reina Sofia, Madrid, the Tate Modern, London and The Museum of Modern Art, New York, address recurrent themes in Boetti’s work such as travel and geography, time, order and disorder and singularity and multitude, while contributions by scholars examine his early influences and his relationship to the cultural, political, and social spheres of Italy and Afghanistan in the 1970s and 1980s. This volume celebrates the material diversity, conceptual complexity and visual beauty of Boetti’s work, proving that he is one of the most important and influential artists of his generation.
