How Vera Rubin convinced the scientific community that dark matter might exist, persevering despite early dismissals of her work. We now know that the universe is mostly dark, made up of particles and forces that are undetectable even by our most powerful telescopes. The discovery of the possible existence of dark matter and dark energy signaled a Copernican-like revolution in astronomy: not only are we not the center of the universe, neither is the stuff of which we're made.

*Astronomer Vera Rubin (1928–2016) played a pivotal role in this discovery. By showing that some astronomical objects seem to defy gravity's grip, Rubin helped convince the scientific community of the possibility of dark matter. In *Bright Galaxies, Dark Matter, and Beyond*, Ashley Jean Yeager tells the story of Rubin's life and work, recounting her persistence despite early dismissals of her work and widespread sexism in science. Yeager describes Rubin's childhood fascination with stars, her education at Vassar and Cornell, and her marriage to a fellow scientist. At first, Rubin wasn't taken seriously; she was a rarity, a woman in science, and her findings seemed almost incredible. Some observatories in midcentury America restricted women from using their large telescopes; Rubin was unable to collect her own data until a decade after she had earned her PhD. Still, she continued her groundbreaking work, driving a scientific revolution. She received the National Medal of Science in 1993, but never the Nobel Prize—perhaps overlooked because of her gender. She's since been memorialized with a ridge on Mars, an asteroid, a galaxy, and most recently, the Vera C. Rubin Observatory—the first national observatory named after a woman.*

Guide to Stars and Planets

Provides monthly star charts, describes each constellation, and reviews what is known about moon, planets, and stars

Conventional star atlases are great for locating constellations and individual stars but *The Star Companion* goes one step further and describes the physical properties of more than 1,100 stars. In the aid of scale diagrams, the reader can get a real sense of the sizes, shapes, distances, and features of many of the stars visible to the naked eye in both the Northern and Southern Hemispheres. Information on their rotational velocities and periods is given together with their spectral type and luminosity. Binary and multiple star systems are explained in detail. Special mention is made of Barnard's, Kapteyn's, Kepler's, and Van Maanen's Stars and the properties of many open clusters are given. With its emphasis on helping the amateur astronomer gain a better understanding of what they are looking at, *The Star Atlas Companion* will provide a new dimension to observing the star and is an invaluable supplement to any star atlas.

A film, video, and DVD guide for the true lover of the cinema, this volume focuses on independent and international films as well as the best of the mainstream. 450 photos throughout.

During the 1960s, a bushel of B-movies were produced and aimed at the predominantly teenage drive-in movie audience. At first teens couldn't get enough of the bikini-clad beauties dancing on the beach or being wooed by Elvis Presley, but by 1966 young audiences became more interested in the mini-skirted, go-go boot wearing, independent-minded gals of spy spoofs, hot rod movies and biker flicks. Profiled herein are fifty sexy, young actresses that teenage girls envied and teenage boys desired including Quinn O'Hara, Melody Patterson, Hilarie Thompson, Donna Loren, Pat Priest, Meredith MacRae, Arlene Martel, Cynthia Pepper, and Beverly Washburn. Some like Sue Ane Langdon, Juliet Prowse, Marlyn Mason, and Carole Wells, appeared in major studio productions while others, such as Regina Carrol, Susan Hart, Angelique Pettyjohn and Suzie Kaye were relegated to drive-in movies only. Each biography contains a complete filmography. Some also include the actresses' candid comments and anecdotes about their films, the people they worked with, and their feelings about acting. A list of web sites that provide further information is also included.

It's a night like any other on board the Icarus. Then, catastrophe strikes: the massive luxury spaceliner is yanked out of hyperspace and plummets into the nearest planet. Lilac LaRoux and Tarver Merendsen survive. And they seem to be alone. Lilac is the daughter of the richest man in the universe. Tarver comes from nothing, a young war hero who learned long ago that girls like Lilac are more trouble than they're worth. But with only each other to rely on, Lilac and Tarver must work together, making a tortuous journey across the eerie, deserted terrain to seek help. Then, against all odds, Lilac and Tarver find a strange blessing in the tragedy that has thrown them into each other's arms. Without the hope of a future together in their own world, they begin to wonder??would they be better off staying here forever? Everything changes when they uncover the truth behind the chilling whispers that haunt their every step. Lilac and Tarver may find a way off this planet. But they won't be the same people who landed on it. The first in a sweeping science fiction trilogy, These Broken Stars is a timeless love story about hope and survival in the face of unthinkable odds.

An illustrated guide to astronomy with information on astronomical instruments, the solar system, the celestial sphere, the origins of the universe, and theories of astronomy from ancient times to the present. Also includes a section on constellations, po

The Young Astronomer's Handbook

Issue 874 March 13-16, 2014

(Updated 9/1/2022 - Includes Lightning Lanes & Genie+!) Walt Disney World is

more than its four amazing theme parks and two water parks. It goes far beyond the hundreds of restaurants and themed hotels. Learn valuable, time-saving secrets that show you how to travel like a VIP in this comprehensive tour guide, written by Orlando locals and Disney insiders. It's Disney Made Easy. Here is just a portion of what we share: * Temporary changes for Covid-19; * Over 50 freebies you can take advantage of around Disney World; * Special activities outside of the parks; * How to reserve Lightning Lanes and use Genie+ so that you don't waste time in hot lines; * How to get extra hours in the parks; * How to save money on food; * The best hotel value for your size of family; * Where to dine with your favorite characters; * How to get the most of your character meet-and-greet experience; * Romance in the parks; * What you will find inside Florida's newest "town," Disney Springs, Walt Disney World's downtown shopping center with food and entertainment; * Information on behind-the-scene tours and special events; * How to avoid crowds; * What months and days to visit; and * What to wear to ensure your comfort during any season

Offers a month-by-month guide to the stars and constellations, discusses the history and nature of stars, and describes meteor showers and the positions of the planets.

A TEST OF LOYALTY... Clan Jade Falcon's war efforts draw closer to Terra, but to conquer this ultimate prize, the Falcons' vicious Khan, Malvina Hazen, must be able to trust all of her warriors to carry out her commands without hesitation—no matter how much death or collateral damage they will cause. For Malvina, victory is the only thing that matters, and those who stand in her way suffer swift and brutal elimination. Star Captain Archer Pryde is an unconventional Falcon MechWarrior who chafes at carrying out his Khan's terror tactics, but he delivers results in combat, so Malvina has turned a blind eye to his beliefs so far. But when civilians on a conquered world revolt against their Clan masters, innocents are caught in the Falcons' crosshairs. Archer and his fellow MechWarriors must prove their mettle to Star Colonel Nikita Malthus, the Khan's vindictive advisor, by carrying out their scorched-earth orders to the letter. But are these orders a betrayal of what it means to be a true and honorable Jade Falcon? With both his loyalty and honor in question, Archer must run the gauntlet between duty and principles, or risk his own destruction.

Deep-Sky Companions: Southern Gems

This fourth edition of Börner's "The Early Universe" is practically a new book, not just updated version. In particular, it is now organized so as to make it more useful as a textbook. And problem sections are also added. In the centre are the connections between particle physics and cosmology: The standard model, some basic implications of quantum field theory and the questions of structure formation. Special emphasis is given to the observed anisotropies of the cosmic microwave background and the consequences drawn for cosmology and for the structure formation models. Nuclear and particle physicists and astrophysicists, researchers and teachers as well as graduate students will welcome this new edition of a classic text and reference.

The Caldwell Catalogue, compiled by the late Sir Patrick Moore (1923–2012), has

delighted amateur astronomers worldwide since its publication in 1995. Twenty years on, Stephen James O'Meara revisits his guide to these 109 deep-sky delights, breathing new life into them and the 20 additional observing targets included as an appendix. This second edition retains O'Meara's detailed visual descriptions and sketches, accompanied by stunning new images taken by amateur photographer Mario Motta and observations by Magda Streicher. The astrophysical descriptions have been updated to account for the many advances in our understanding of the objects, not least due to an armada of space-borne observatories and the new technologies used in large ground-based telescopes. Ideal for observers who have completed the Messier objects and are looking for their next challenge, Deep-Sky Companions: The Caldwell Objects is a fitting tribute from a renowned visual observer to one of astronomy's most famous personalities.

Stars and Galaxies examines how galaxies like the Milky Way and Andromeda work and the stars and planets within them. Detailed illustrations and clear charts help explain these complicated topics.

Deep-Sky Companions: Hidden Treasures

Since the early 20th century, animated Christmas cartoons have brightened the holiday season around the world--first in theaters, then on television. From devotional portrayals of the Nativity to Santa battling villains and monsters, this encyclopedia catalogs more than 1,800 international Christmas-themed cartoons and others with year-end themes of Hanukkah, Kwanzaa and the New Year. Explore beloved television specials such as A Charlie Brown Christmas, theatrical shorts such as Santa's Workshop, holiday episodes from animated television series like American Dad! and The Simpsons, feature films like The Nutcracker Prince and obscure productions such as The Insects' Christmas, along with numerous adaptations and parodies of such classics as A Christmas Carol and Twas the Night before Christmas.

Publisher Description

Discover more than 300 celestial wonders that can be viewed with common "backyard" telescopes. Describes and locates sun, moon, planets, star clusters, supernova remnants, and other phenomena. 1998 edition.

Unlock the mysteries of the night sky with this comprehensive guide to astronomy. The Practical Astronomer explains and demystifies stargazing and teaches you how to observe and navigate the night sky. Learn how to set up your binoculars and telescopes and find out how to spot different celestial bodies, such as stars, planets, nebulae, and galaxies. Train your telescope into the sky and learn astrophotography with your smartphone camera or digital camera. Hop from one star to another to locate the different constellations or other deep space objects. The book contains sky maps charting all the 88 constellations in both the northern and southern hemisphere, helping you map the star patterns, from Ursa Major and Orion to Pavo and Aquarius. The Practical Astronomer also contains monthly star charts that follow the changing positions of stars in the night sky through the year. Discover the solar system and know about other objects, such as satellites and space stations, that light up the sky. A reference section at the back of the book provides handy information about every planet and includes information about eclipses. Become an accomplished amateur astronomer with this practical guide.

Amateur astronomers are always on the lookout for new observing challenges. This exciting book retraces the steps of the greatest visual observer and celestial explorer who ever lived. This is a practical guide to locating and viewing the most impressive of Herschel's star clusters, nebulae and galaxies, cataloging more than 600 of the brightest objects, and offering detailed descriptions and images of 150 to 200 of the best.

Stars and Galaxies

Stephen O'Meara's new and exciting observing guide spotlights an original selection of 109 deep-sky objects that will appeal to sky-watchers worldwide. His 'hidden treasures' include a wonderful assortment of galaxies, open clusters, planetary nebulae and more, all of which have been carefully chosen based on their popularity and ease of observing. None of these objects are included in either the Messier or the Caldwell catalogs, and all are visible in a 4-inch telescope under dark skies. Stunning photographs and beautiful drawings accompany detailed visual descriptions of the objects, which include their rich histories and astrophysical significance. The author's original finder charts are designed to help observers get to their targets fast and efficiently.

In Southern Gems, Stephen James O'Meara makes a detour beneath the southern skies, presenting a fresh list of 120 deep-sky objects

for southern hemisphere stargazers to observe. Showcasing many exceptional objects catalogued by the pioneering observer James Dunlop, known as the 'Messier of the southern skies', all are visible through small- to moderate-sized telescopes or binoculars under dark skies. The list features some of the blackest dark nebulae, icy blue planetary nebulae and magnificent galaxies of all types. Each object is accompanied by beautiful photographs and sketches, original finder charts, visual histories and up-to-date astrophysical background information. Whether you live in the southern hemisphere or are just visiting, this new Deep-Sky Companion will make a perfect observing partner, whatever your background. There is no other southern sky guide like it on the market.

A Bricklayer's Guide to the Galaxy . . . The inspirational memoir of a former brickie who followed his passion for the stars and built his own observatory. Perfect for readers of Robert Macfarlane, Helen Macdonald and James Rebanks - as well as fans of Brian Cox and the BBC's Sky at Night Gary Fildes left school at sixteen, got a trade like most of his mates and was soon married with four kids. His life seemed set. But he had a secret. Something he only practised late at night with a few like-minded friends. Then one day, middle age approaching alarmingly, he acted on his lifelong passion. He finally came out. As an astronomer. Today, Gary is the founder and lead astronomer of Kielder Observatory, one of the top ten stargazing sites in the world, which he also helped to build. Situated in the beautiful forests of Kielder, Northumberland, within Europe's largest protected dark sky park, it offers some of the UK's most spectacular views of stars, planets and galaxies. An Astronomer's Tale is Gary's inspirational story: part memoir, part nature writing, part seasonal guide to the night sky. It is a book brimming with passion; and at a time when the world is captivated by space, it will leave you ready to get out there and explore the wonders of the skies for yourself.

The Herschel Objects and How to Observe Them

Proceedings of the August 1997 symposium. One hundred and ninety-four contributions present comparative studies on the data of the Milky Way and central regions of nearby galaxies. Included is information on galactic bulges, galactic center star clusters, star formation, starbursts, neutral ISM in the galactic center, molecular gas in the nuclei of galaxies, gas dynamics in the galactic center, the central parsecs of the milky way, magnetic and high-energy phenomena, black holes in

galaxies, black hole in the galactic center, and black hole powering of AGN and jets. A sampling of topics: diffraction-limited IR speckle masking observations of the central regions of Seyfert galaxies, the stellar content of the Quintuplet cluster, and the structural characteristics of spiral bulges. Annotation copyrighted by Book News, Inc., Portland, OR

Through his influential work on cultural capital and social mobility, the French sociologist Pierre Bourdieu has provided critical insights into the complex interactions of power, class, and culture in the modern era. Ubiquitous though Bourdieu's theories are, however, they have only intermittently been used to study some of the most important forms of cultural production today: cinema and new media. With topics ranging from film festivals and photography to constantly evolving mobile technologies, this collection demonstrates the enormous relevance that Bourdieu's key concepts hold for the field of media studies, deploying them as powerful tools of analysis and forging new avenues of inquiry in the process.
