True power in this world comes from economic independence, but too many people have too much month left at the end of their money. John Hope Bryant, founder and CEO of Operation HOPE, illuminates the path toward liberation that is hiding in plain sight. His message is simple: the supermajority of people who live in poverty, whom Bryant calls the invisible class, as well as millions in the struggling middle class, haven't gotten "the memo"—until now. Building on his personal experience of rising up from economically disadvantaged circumstances and his work with Operation HOPE, Bryant teaches readers five rules that lay the foundation for achieving financial freedom. He emphasizes the inseparable connection between "inner capital" (mindset, relationships, knowledge, and spirit) and "outer capital" (financial wealth and property). "If you have inner capital," Bryant writes, "you can never be truly poor. If you lack inner capital, all the money in the world cannot set you free." Bryant gives readers tools for empowerment by covering everything from achieving basic financial literacy to investing

in positive relationships and approaching wealth with a completely new attitude. He makes this bold and controversial claim: "Once you have satisfied your basic sustenance needs—food, water, health, and a roof over your head—poverty has more to do with your head than your wallet." Bryant wants to restore readers' "silver rights," giving them the ability to succeed and prosper no matter what very real roadblocks society puts in their way. We have more power than we realize, if only we can recognize and claim it. "We are our first capital," Bryant writes. "We are the CEOs of our own lives."

"How can I get their daycare provider on board?" "My kid was doing so well—why is he regressing?" "And what about nighttime?!" Oh Crap! Potty Training can solve all of these (and other) common issues. This isn 't theory, you 're not bribing with candy, and there are no gimmicks. *You've experienced the shiny, point-and-click surface of your Linux computer—now dive below and explore its depths with the power of the command line. The Linux Command Line takes you from your very first terminal keystrokes to writing full programs in Bash, the most popular Linux shell. Along the way you'll learn the timeless skills handed down by generations of gray-bearded, mouse-shunning gurus: file navigation, environment configuration, command chaining, pattern matching with regular expressions, and more. In addition to that practical knowledge, author William Shotts reveals the philosophy behind these tools and the rich heritage that your desktop Linux machine has inherited from Unix supercomputers of yore. As you make your way through the book's short, easily-digestible chapters, you'll learn how to: * Create and delete files, directories, and symlinks * Administer your system, including networking, package installation, and process management * Use standard input and output, redirection, and pipelines * Edit files with Vi, the world's most popular text editor * Write shell scripts to automate common or boring tasks * Slice and dice text files with cut, paste, grep, patch, and sed Once you overcome your initial "shell shock," you'll find that the command line is a natural and expressive way to communicate with your computer. Just don't be surprised if your mouse starts to gather dust. A featured resource in the Linux Foundation's "Evolution of a SysAdmin"*

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time. Ideal for PC owners looking for an accessible, easy-to-follow reference, this beginner's guide to PC hardware offers expert advice on every component--processors, motherboards, memory, BIOS, CD-ROM and DVD drives, video cards, and much more. You'll also get details on external devices, including monitors, printers, keyboards, and modems. The book covers both Intel and non-Intel CPUs and USB and AGP ports.

Design and Use of Process Safety Valves to ASME and International Codes and Standards

In 1986 Frank Davis wrote his first poem. His thoughts were of our attitudes toward the Indians and how we infringed on their territories and lives. Most movies depict the Indian as bad and we were led to believe they were our enemies. Reading more realistic books gave him a different view. In many instances the Indians were friendly and helped pioneers in stress. In two of his poems he brings out his own version of their real struggles of the invasion of the white man, to be out numbered and controlled in a no-win situation. Then his thoughts of his childhood and memories of growing up, his slant on life and visions in a folklore atmosphere. His love and feelings of life and mother nature, to read his poetry will acquaint us with the Inner person and will remind us of ourselves in many ways. His first twenty poems were recorded and a friend listened to that first tape and exclaimed, 'Frank, it's just like being there,' hence the name Just Like Being There. In 1993 he married his best friend and was inspired to try writing lyrics to show his true colors to her. She is his biggest fan and finally someone to add rhythm to his life. Maybe some time in the future, one or two of his lyrics will be put to music.
