*"This manual contains overview information on treatment technologies, installation practices, and past performance."--Intro.*

*Canadian Engineer*

*Eighth International Conference on Low-Volume Roads, 2003*

*A Policy on Geometric Design of Highways and Streets*

*Provincial Financial Assistance and Services for Local Government*

*Chip Seal Best Practices*

**Includes entries for maps and atlases.**

**Developmental issue**

**A Weekly Paper for Civil Engineers and Contractors ...**

**World Survey of Current Research and Development on Roads and Road Transport : Prepared for the United States Bureau of Public Roads**

**Transportation Research Record**

**Report**

**This synthesis will be of interest to pavement designers, maintenance engineers, and others responsible for the management of highway pavements. Information is presented on pavement management systems - the established, documented procedures used to treat all activities involved in providing and sustaining pavements in an acceptable condition. As highway agencies focus more attention on maintenance and rehabilitation of highway networks, the use of some form of a pavement management system becomes increasingly important. This report of the Transportation Research Board describes the features, applicability, and use of a pavement management system and recommends five general steps for implementing a new pavement management system or improving an existing system.**

**Proceedings of a Workshop : Final Report, June 1974 : Prepared for Federal Highway Administration, Offices of Research and Development**

**Proceedings - Canadian Society for Civil Engineering**

**Microsurfacing**

**Report No. FHWA-RD.**

**Engineering News-record**

**This publication contains two pavement maintenance manuals intended for use by highway maintenance agencies and contracted maintenance firms in the field and in the office. Each is a compendium of good practices for asphalt concrete crack sealing and filling and pothole repair, respectively, stemming from two Strategic Highway Research Program studies.**

**Proceedings of the Annual Conference**

**2004**

**Subject Catalog**

**Road Abstracts**

**A Comparative Report of Road and Street Budgets**

TRB's National Cooperative Highway Research Program (NCHRP) Synthesis 411: Microsurfacing explores highway microsurfacing project selection, design, contracting, equipment, construction, and performance measurement processes used by transportation agencies in the United States and Canada. Microsurfacing is a polymer-modified cold-mix surface treatment that has the potential to address a broad range of problems on today's highways --

## Road Research in Canada Roadside Design Guide

*This Low-Volume Roads Engineering Best Management Practices Field Guide is intended to provide an overview of the key planning, location, design, construction, and maintenance aspects of roads that can cause adverse environmental impacts and to list key ways to prevent those impacts. Best Management Practices are general techniques or design practices that, when applied and adapted to fit site specific conditions, will prevent or reduce pollution and maintain water quality. BMP's for roads have been developed by many agencies since roads often have a major adverse impact on water quality, and most of those impacts are preventable with good engineering and management practices. Roads that are not well planned or located, not properly designed or constructed, not well maintained, or not made with durable materials often have negative effects on water quality and the environment. Black and white print.*
