The history of painters in comics goes back to the dawn of pulp magazine covers. From "The Shadow" and "The Spider" to "The Black Bat" and so many other characters, painter's works have graced the covers of comics and pulps, which have influenced many artists over the decades. This deluxe coffeetable art book, edited and overseen by Alex Ross — one of the comic industry's most recognized painters, whose expertise has helped guide and

Drawing from recent theories of virtuality, performativity, and governmentality, and on post-colonial activist scholarship from the global south, this book presents a series of ethnographic and archival studies of what Mukhopadhyay terms 'vernacular globalisation' in India. The book's six provocative but substantive chapters of the book engage a wide range of events, objects, histories, narratives and episodes with the intent of interrogating what Frantz Fanon called the 'zone of

journey across the Subcontinent, through its remote rural villages and its massive metropolises, seeking out the nexuses of change created by smartphones, and with them connection to the internet. As always with India, the numbers are staggering: in 2000, 20 million Indians had access to the internet; by 2017, 465 million were online, with three Indians discovering the internet every second. By 2020, India's online community is projected to exceed 700 million, and more than a billion Indians are expected to be online by 2025. In the course of a single generation, access to the internet has progressed from dial-up connections on PCs, to broadband access, wireless, and now 4G data on phones. The

rise of low-cost smartphones and cheap data plans has meant the country leapfrogged the baby steps their Western counterparts took toward digital fluency. The results can be felt in every sphere of life, upending traditions and customs and challenging conventions. Nothing is untouched, from arranged marriages to social status to business start-ups, as smartphones move the entire economy from cash-based to credit-based. Access to the internet is affecting the progress of progress itself. As Agrawal shows, while they offer immediate and sometimes mind-altering access to so much for so many, smartphones create no immediate utopia in a culture still driven by poverty, a caste system, gender

inequality, illiteracy, and income disparity. Internet access has provided greater opportunities to women and changed the way in which India's many illiterate poor can interact with the world, but it has also meant that pornography has become more readily available. Under a government keen to control content, it has created tensions. And in a climate of hypernationalism, it has fomented violence and even terrorism. The influence of smartphones on "the world's largest democracy" is nonetheless pervasive and irreversible, and India Connected reveals both its dimensions and its implications.

Never in human history was there such a chance for freedom of expression. If we have Internet access, any one of us can publish almost anything we like and potentially reach an audience of millions. Drawing on a lifetime of writing about dictatorships and dissidents, Timothy Garton Ash argues that in this connected world that he calls cosmopolis, the way to combine freedom and diversity is to have more but also better free speech. Across all cultural divides we must strive to agree on how we disagree. He draws on a thirteen-language global online project—[freespeechdebate.com](http://freespeechdebate.com)—conducted out of Oxford University and devoted to doing just that. problems about the nature of representation. This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability--a particularly important issue in computational science--sheds new light on the philosophical analysis of scientific reasoning.

The media continue to have a significant persuasive influence on the public perception of crime, even when the information presented is not reflective of the crime rate or actual crime itself. There have been numerous theoretical studies on fear of crime in the media, but few have considered this from a social psychological perspective. As new media outlets emerge and public dependence on them increases, the need for such awareness has never been greater. This volume lays the

foundation for understanding fear of crime from a social psychological perspective in a way that has not yet been systematically presented to the academic world. This volume brings together an international team of experts and scholars to assess the role of fear and the media in everyday life. Chapters take a multidisciplinary approach to psychology, sociology and criminology and explore such topics as dual process theory, construal level theory, public fascination with gangs, and other contemporary issues.
