Sb 50 Connectors Up To 120 Amps

This research project examined the speed characteristics of passenger cars and vehicles with high centers of gravity on

freeway connectors
to determine any
discernable
differences between
the two vehicles
types. Data to

speed limits and
average speeds at
points along

connector ramps were collected on freeway connectors in Houston. Four different vehicles were driven through the curves at varying speeds while monitoring a manual ball-bank indicator as well as collecting lateral acceleration

data electronically.

The project determined that the general public often exceeds the posted advisory speed limits, often by more than 10 mph. While there are no seemingly discernible differences in lateral

Where To Download Sb 50 Connectors Up To 120 Amps

accelerations by different types of vehicles for a given speed along a curve, there may be a 5 to 10 mph difference in the driver's comfortable speed between vehicle types. The findings of this project indicate that there

may be differences
between the
maximum
comfortable speeds
that drivers of heavy
vehicles and
passenger car type
vehicles will accept
for a freeway-to-
freeway curve. The
following
conclusions

confirmed by this project are applicable to freeway-to-freeway connectors and should be considered in their design, and especially in their re-design: to provide adequate deceleration and acceleration

distances for tractor-trailers and other heavy vehicles, to reduce the side friction demand on trucks in the curve by developing superelevation more on the tangent, to place curve advisory speed signing with more regard to the

deceleration needs of trucks. The results of this project indicate that modifying the current advisory speed setting criteria to use a 10-degree level to set a truck advisory speed and a 13-degree level for setting a more realistic passenger

may be appropriate

Well-implemented public involvement programs have many potential benefits for transportation agencies including enhanced credibility with the public, decisions reflecting community values, and reduced risks of litigation

(O'Connor et al.,
2000). The

objectives of this study included a broad assessment of the Virginia Department of Transportation's (VDOT's) public involvement practices and the development of a public involvement "toolkit" for use by

VDOT staff. The toolkit describes an array of techniques that may be used from the earliest planning stages of transportation projects through their construction, noting advantages, disadvantages, special considerations in
