In honor of First Contact Day, IDW is thrilled to present a special digital edition of Star Trek: First Contact, the official comic tie-in to the beloved movie. When the Borg attempt to alter the history of the universe by traveling back in time to stop Earth's first encounter with alien life, it's up to Captain Jean-Luc Picard and the crew of the Enterprise to stop them... if they aren't assimilated first! Adapted by writer John Vornholt and artists Rod Whigham and Terry Pallot from the story written by Rick Berman, Brannon Braga & Roland D. Moore.

Essays on how motion pictures in the first two decades of the 20th century constructed 'communities of nationality' . . . recommended."
—*Choice*
While many studies have been written on national cinemas, Early Cinema and the "National" is the first anthology to focus on the concept of national film culture from a wide methodological spectrum of interests, including not only visual and narrative forms, but also international geopolitics, exhibition and marketing practices, and pressing linkages to national imagaries. The essays in this richly illustrated landmark anthology are devoted to reconsidering the nation as a framing device for writing cinema history. Many of the 34 contributors show that concepts of a national identity played a role in establishing the parameters of cinema's early development, from technological change to discourses of stardom, from emerging genres to intertiting practices. Yet, as others attest, national meanings could often become knotty in other contexts, when concepts of nationhood were contested in relation to colonial/imperial histories and regional configurations. Early Cinema and the "National" takes stock of a formative moment in cinema history, tracing the beginnings of the process whereby nations learned to imagine themselves through moving images.

The private Life of the Renaissance
Florentines is an unchanged, high-quality reprint of the original edition of 1896. Hansebooks is editor of the literature on different topic areas such as research and science, travel and expeditions, cooking and nutrition, medicine, and other genres. As a publisher we focus on the preservation of historical literature. Many works of historical writers and scientists are available today as antiques only. Hansebooks newly publishes these books and contributes to the preservation of literature which has become rare and historical knowledge for the future.

Nanostructured Zinc Oxide

This charming love story captures the lives of Quebec City's early English-speaking inhabitants, the Québécois, and the Native people, in the decade between Wolfe's victory on the Plains of Abraham in 1759 and the American War of Independence in the 1770s. First published in 1769, The History of Emily Montague, which brings the 18th-century novel into a New World context, is rightly called Canada's iindeed North America's i first novel.

Grotage visionary Sir Jack Pitman has an idea. Since most people are too lazy to travel from landmark to landmark, why not simplify things and create a new England on the Isle of Wight? Unfortunately, his idea is a huge success, and the resulting theme park threatens to supersede the original. Called England, England, it has all the elements of "Old England" in one convenient location. Wander into the new Sherwood Forest and you may spot Robin Hood and his now sexually ambiguous Merrie Men. Or take a stroll to see Stonehenge and Anne Hathaway's Cottage, enjoy a ploughman's lunch atop the White Cliffs of Dover, then pop over to see the Royals, now on contract to Sir Jack, in their scaled-down version of Buckingham Palace. Every detail has been considered: even the postcards come pre-stamped! Julian Barnes' first novel in six years is a ferociously funny examination of the search for authenticity and truth in a fabricated world.

Information on some 800 products—pesticides, herbicides, insecticides, fungicides, plant growth regulators, animal repellents, nematicides, soil penetrants, seed treatments, composting aids, micronutrients, and speciality fertilizers. All of the products listed are currently available. No bibliography. Compiled by the Centre for Law in Rural Areas, based in Aberystwyth, Wales, nine essays explore legal and political issues involved in promoting conservation in the countryside in a manner consistent with modern farming techniques. The impetus is concern over rural mid-Wales, but the perspective of the essays is British and European. Among the topics are agricultural diversification, pollution, the organization of conservation authorities, common land, and sites needing special protection. Conversations with Filmmakers

The First Major Survey of Photography's Place in Recent Art History.

This book introduces the methodological and philosophical problems with which modern history of science is concerned, offering a comprehensive and critical review through description and evaluation of significant historiographical viewpoints. Incorporating discussion of key problems in general historical writing, with examples drawn from a range of disciplines, this non-elementary introduction bridges the gap between general history and history of science. Following a review of the early development of the history of science, the theory of history as applied to science history is introduced, examining the basic problems which this generates, including problems of periodisation, ideological functions, and the conflict between diachronical and anachronical historiography. Finally, the book considers the critical use, and analysis, of historical sources, and the possibility of the experimental reconstruction of history. Aimed primarily at students, the book's broad scope and integration of historical, philosophical and scientific matters will interest philosophers, sociologists and general historians, for whom there is no alternative introduction to the subject at this level.

Object-oriented techniques and languages have been proven to significantly increase engineering efficiency in software development. Many benefits are expected from their introduction into electronic modeling. Among them are better support for model reusability and flexibility, more efficient system modeling, and more possibilities in design space exploration and prototyping. Object-Oriented Modeling explores the latest techniques in object-oriented methods, formalisms and hardware description language extensions. The seven chapters comprising this book provide an overview of the latest object-oriented techniques for designing systems and hardware. Many examples are given in C++, VHDL and real-time programming languages. Object-Oriented Modeling describes further the use of object-oriented techniques in applications such as embedded systems, telecommunications and real-time systems, using the very latest techniques in object-oriented modeling. It is an essential guide to researchers, practitioners and students involved in software, hardware and system design.

Beyond Beef

Recognising strangeness in familiar objects, the present in the past, the construed in what is authentic -- the four masterly photographers show excerpts from our world in which the boundary between reality and imagination becomes blurred. From fleeting everyday scenes to mysterious happenings and historical events, they reveal a complex and multi-layered reality. Thomas Demand, Philip-

Lorca dICorcia, Andreas Gursky and Jeff Wall use the proximity to reality and the momentary nature of photography in order to create their idiosyncratic viewpoints of reality. What is real? They play with the viewers' perceptions, irritate and invite them to an individual interpretation of what is shown. This exclusive volume presents the works of the stars of the contemporary

international photography scene magnificently and in clearly narrated texts.

This book contains contributions presented at the Active Flow Control 2006 conference, held September 2006, at the Technische Universitat Berlin, Germany. It contains a well balanced combination of theoretical and experimental state-of-the-art results of Active Flow Control. Coverage combines new developments in actuator technology, sensing, robust and optimal open- and closed-loop

control and model reduction for control.

A radical, alternative guidebook to the history of San Francisco, complete with maps detailing walking and bike routes around the city.

Reports of the beneficial health effects of some peptides have begun to make their way into the scientific literature. Peptides can act as immunomodulators, and have been shown to have a positive influence on calcium absorption, and on regulation of serum cholesterol. A number of peptides may also possess antimicrobial properties that enhance the body's defense mechanisms, and others may

produce inhibitory effects for angiotensin-I-converting enzyme (ACE), leading to novel treatments for blood pressure conditions, heart failure, and diabetes. Modern food biotechnology may also allow for the production of highly important products for those suffering life-altering food allergies. A compendium of cutting-edge information for research scientists and clinicians Nutraceutical Proteins and Peptides in Health and Disease is the first book that provides comprehensive discussions on bioactive proteins and peptides in the area of nutraceutical and functional foods. It looks at protein and peptide impact on the body's absorption, defense, regulating, and nervous systems, then delves into hypo-allergenic foods and modern approaches to nutraceutical research and production. With 32 chapters written by 63 scientists working at the frontier of this revolutionizing field, it includes state-of-the-art information on-- The cholesterol-lowering capabilities of proteins and peptides Opioid-like peptides The antibodies found in milk and egg yolks Enzymes derived from traditional Asian fermented foods found useful in novel thrombolytic therapy ACE-

inhibitory peptides Enzymatic treatments used to create anti-allergenic food Recent developments in proteomics that are making certain processes economically feasible, including those employed in the binding of bioactive peptides Nutraceutical Proteins and Peptides in Health and Disease provides a compendium of cutting-edge information that can be put to direct use in research, therapy,

and production. Biochemists, nutritional scientists, food scientists, and health professionals, as well as graduate students in these fields, will find this book highly useful.

Made Realities

As a first-time visitor to London, De Amicis was awestruck by the bustle and magnificence of the Victorian metropolis and wrote a number of sketches in his trademark witty, observational style, which made him one of the best-selling travel writers of his age.Originally conceived as a series of newspaper articles and later published in volume form, De Amicis's Memories of London brings back to life all the bygone charm of the capital of the British Empire. De Amicis's impressions are paired here with a piece written by one of his contemporaries, the French writer LouisLaurent Simonin, which leaves the city's opulence and grandeur behind and offers an uncompromising look at the poverty and squalor of its most deprived areas.

In the first three parts of this book an exploration of the historical role of cattle in Western civilization is given. Part four examines the human impact of the modern cattle complex and the world beef culture. The range of environmental threats that have been created, in part, by the modern cattle complex is described in part five. Part six examines the psychology of cattle complexes and the politics of beef eating in Western society. The author hopes that this book will contribute to moving our society beyond beef

Unaware of his pirate ancestry and his clan's long-standing rivalry with the Hood family, accountant Morgan Cooke is shanghaied by his estranged father and placed at the forefront of the families' latest clash in the Caribbean, which is marked by the promise of a vast treasure. A first novel. 20,000 first printing.

For the seasoned warriors of America's most elite and covert defence unit, each mission could be their last. Now a grim Presidential directive comes down hard, green-lighting a desperate search-and-destroy operation where minutes count.

Cultural Revolution in Britain, France, Italy, and the United States, c.1958-c.1974

Set in a near future world, the land of Lumaraeon, once nearly destroyed by war, is still trying to hold onto old customs and beliefs in gods while on the brink of another war that could once again tear the land asunder. Experimental Heart: Pieces, the first in the Experimental Heart Series, is set in the point of view of a human war experiment fugitive named Eira who, after facing death, is saved by an unlikely rescuer, a dragon shapeshifter. The two team up, along with her fellow

in the impending war.

This is the true moving story of a young man growing up in the 1950's, of staunch Roman Catholic parents. Encouraged by family and teachers, the eleven years old holds a burning desire to become a Missionary Priest. His story unfolds against the backdrop of a Catholic Church going through massive change, yet stuck firmly in the past, with teachings and traditions going back hundreds of years. Leaving the love of his family he joins a junior seminary where he begins his struggle for God and his life at a boarding school. It tracks his adolescent life, desperately trying to come to terms with being a youth with normal feelings, whilst living in the unusual environment of a Monastery. It tells of his emotional turmoil and inability to make a definite decision about his future, as he becomes more and more institutionalised. It follows his time in a Scottish Monastery where he is initiated into strict Monastic ways, then moves onto a Seminary where he progresses the catalysts for The Nearly Man making the decision of his lifetime.

A proposed railway on the 5th European Railway Corridor (Venice-Kiev) between the northern Adriatic ports of Koper (Slovenia) and Trieste (Italy) and the interior of Slovenia required extensive karstological studies and planning. This book contains the knowledge gained from these studies as well as further information on the regional karst surface and underground, the karst hydrogeology and the specific caves of the Beka-Ocizla cave system.

It is an acknowledged if not accepted fact that all European societies are being fundamentally transformed, and indeed perceptively unsettled, by increased migrations across nations and by the asserted presence of established minorities within their borders. The scale and speed at which these transformations have taken place have brought in their wake considerable social impacts and no small measure of fear and anxiety. Encounters with such diversity are part and parcel of the training and continuous professional development of social workers and other social professions. However, the moral and political dimensions of the role, scope and nature of the social work task in responding appropriately to these changed and changing realities are rather more contested. This volume addresses many dimensions of the response to issues of race and ethnicity in social work practice in Europe. It extends the debates on inter-cultural and race equality practice in social work practice in Europe.

The spearhead of a highly successful export drive, a winning production racer and the top 'street fighter' of its day, the Triumph Bonneville retains a special place in the hearts of motorcyclists worldwide. Motorcycle expert Steve Wilson offers personal recollections from those who have tuned, raced and restored Bonnevvilles; details of the Bonnie's racing successes; buying and tuning tips; and technical specifications to deliver this detailed study of the machine and the men who helped make it a motorcycle icon.

Water is not only used in the domestic context, but also in agriculture and industry in the production of commercial goods, from food to paper. The water footprint is an indicator of freshwater use that looks at both direct and indirect use of water by a consumer or producer. The water footprint of an individual, community or business is defined as the total volume of freshwater that is used to produce the goods and services consumed by the individual or community or produced by the business. This book shows how the water footprint concept can be used to assess the water footprint of a product, and how it can guide reduction of water use to a sustainable level. With a number of case studies, it illustrates water use along supply chains and that water consumption at one place is often linked to water use at another. For example, it is calculated that it takes 15,000 litres of water to produce 1 kg of beef, or 8,000 litres of water to produce a pair of jeans. The book shows that imports of water-intensive products can highly benefit water-scarce countries, but also that this creates a dependency on foreign water resources. The book demonstrates how water footprinting can be used to assess the water footprint of a product, and how it can guide reduction of water use to a sustainable level. With a number of case studies, it illustrates water use along supply chains and that water consumption at one place is often linked to water use at another. With a number of case studies, it illustrates water use along supply chains and that water consumption at one place is often linked to water use at another. For example, it is calculated that it takes 15,000 litres of water to produce 1 kg of beef, or 8,000 litres of water to produce a pair of jeans. The book shows that imports of water-intensive products can highly benefit water-scarce countries, but also that this creates a dependency on foreign water resources. The book demonstrates how water footprinting can be used to assess the water footprint of a product, and how it can guide reduction of water use to a sustainable level. With a number of case studies, it illustrates water use along supply chains and that water consumption at one place is often linked to water use at another. For example, it is calculated that it takes 15,000 litres of water to produce 1 kg of beef, or 8,000 litres of water to produce a pair of jeans.
