Essentials of Personnel Assessment and Selection discusses the essentials that managers and other well-educated people should know about the assessment processes so widely used in contemporary society--and so widely not understood. It emphasizes that good prediction requires well-formed hypotheses about personal characteristics that may be related to valued behavior at work and the need for developing a theory of the attribute one hypothesizes as a predictor--a thought process too often missing from work on selection procedures. In addition, it explores such topics as team-member selection, situational judgment tests, non-traditional tests, individual assessment, and testing for diversity. The goal is to produce an accessible guide to assessment that covers basic and advanced concepts in a straight-forward, readable style. It provides a review of the most relevant statistical concepts and modern selection practices that will equip the reader with the tools needed to be competent consumers of assessment procedures and practices, and to be well-informed about the kinds of questions to be answered in evaluating them. This book will appeal to instructors of advanced undergraduate and master's level courses on personnel selection and assessment. If supplemented by other readings on selected topics, it would be useful in doctoral seminars. Also, students interested in becoming users of research-based assessment and selection information and techniques will find it useful.

This book is the first volume of an attempt to capture and record some of the answers to these questions—either from the pioneers themselves or from those persons who worked most closely with them. We know there are many pioneers and early trailblazers who are not included in this volume, but there are other volumes to follow. As we have posed questions, rummaged through files and oft-neglected books, and probed the memories of many individuals, we have come to realize our list of true pioneers is ever growing. There are names on the list that most of us readily recognize, and there are names of whom few of us have heard—yet who were significant in their roles as mentors or idea development and teaching. We quickly discovered that the “family tree” showing connections between these people is not a neat, clean simple branching tree, but is more like spaghetti. The connections are many, are intertwined, and all have their significance. The stories in this volume demonstrate how vital this network was in supporting the individual pioneers during their journey in difficult times and continues to be for those of us today in our own enterprise.

This totally revised second edition is a comprehensive volume presenting authoritative information on the management challenges facing today's clinical laboratories. Provides thorough coverage of management topics such as managerial leadership, personnel, business planning, information management, regulatory management, reimbursement, generation of revenue, and more. Includes valuable administrative resources, including checklists, worksheets, forms, and online resources. Serves as an essential resource for all clinical laboratories, from the physician's office to hospital clinical labs to the largest commercial reference laboratories, providing practical information in the fields of medicine and healthcare, clinical pathology, and clinical laboratory management, for practitioners, managers, and individuals training to enter these fields.

Deryn Watson and Jane Andersen Editors INTRODUCTION The role of a Preface is to introduce the nature of the publication. The book that emerges from an IFIP Technical Committee World Conference on Computers in Education is complex, and this complexity lies in the nature of the event from which it emerges. Unlike a number of other major international conferences, those organised within the IFIP education community are active events. A WCCE is unique among major international conferences for the structure that deliberately ensures that all attendees are active participants in the development of the debate. In addition to the major paper presentations and discussion, from international authors, there are panel sessions and professional working groups who debate particular themes throughout the event. There is no doubt that this was not a dry academic conference - teachers, lecturers and experts, policy makers and researchers, learners and manufacturers mingled and worked together to explore, reflect, discuss and plan for the future. The added value of this event was that we know

that it will have an impact on future practice; networks will be formed, both virtual and real –ideas will change and new ones will emerge. Capturing the essence of this event is a challenge – this post–conference book has three parts. The first is the substantial number of theme papers.
