Active science: Level 1.

Middle School Life Science Teacher's Guide is easy to use. The new design features tabbed, loose sheets which come in a stand-up box that fits neatly on a bookshelf. It is divided into units and chapters so that you may use only what you need. Instead of always transporting a large book or binder or box, you may take only the pages you need and place them in a separate binder or folder. Teachers can also share materials. While one is teaching a particular chapter, another may use the same resource material to teach a different chapter. It's simple; it's convenient.

What activities might a teacher use to help children explore the life cycle of butterflies? What does a science teacher need to conduct a "leaf safari" for students? Where can children safely enjoy hands-on experience with life in an estuary? Selecting resources to teach elementary school science can be confusing and difficult, but few decisions have greater impact on the effectiveness of science teaching. Educators

will find a wealth of information and expert guidance to meet this need in Resources for Teaching Elementary School Science. A completely revised edition of the best-selling resource guide Science for Children: Resources for Teachers, this new book is an annotated guide to hands-on, inquiry-centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade. (Companion volumes for middle and high school are planned.) The guide annotates about 350 curriculum packages, describing the activities involved and what students learn. Each annotation lists recommended grade levels, accompanying materials and kits or suggested equipment, and ordering information. These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to: Ask questions and find their own answers. Experiment productively. Develop patience, persistence, and confidence in their own ability to solve real problems. The entries in the curriculum section are grouped by scientific area—Life Science, Earth Science, Physical Science, and Multidisciplinary and Applied Science—and by type—core materials, supplementary materials, and science activity books.

Additionally, a section of references for teachers provides annotated listings of books about science and teaching, directories and guides to science trade books, and magazines that will help teachers enhance their students' science education. Resources for Teaching Elementary School Science also lists by region and state about 600 science centers, museums, and zoos where teachers can take students for interactive science experiences. Annotations highlight almost 300 facilities that make significant efforts to help teachers. Another section describes more than 100 organizations from which teachers can obtain more resources. And a section on publishers and suppliers give names and addresses of sources for materials. The guide will be invaluable to teachers, principals, administrators, teacher trainers, science curriculum specialists, and advocates of hands-on science teaching, and it will be of interest to parent-teacher organizations and parents.

Teacher Resource Pack

Second in a series of four books designed for Years 7-10 and the general syllabus for New South Wales, to be used with 'Dynamic Science Book 2'. Provides a summary of objectives and suggests teaching strategies for each chapter. Also lists equipment needed for each activity, hints on performances, suggestions for further activities and blackline masters with answers.

The Science for WA series has been specifically tailored to meet the requirements of the Western Australia Science Syllabus. The books have been carefully crafted to promote deep conceptual understanding and skill development. Each chapter of each book is task-based, so students are engaged fully and have a clear purpose in learning. The Years 8, 9 and 10 Student Books contain Student CDs with activities like 'Let's Try Technology' and 'Find Out on the Web', which links to websites, interactive animations linked to The Learning Federation Learning Objects, and auto-correcting self tests. The Teacher Resource Pack at each level comes in both printed and electronic formats, so it can be uploaded onto the school intranet. Each pack contains blackline masters for each chapter, chapter assessment material and answers to text exercises and 'Let's Try Technology' activities.

Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, Teaching About Evolution and the Nature of Science provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents, and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists approach the question of evolution; and it illustrates the nature of science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials, and step-by-step presentations are provided for each activity. In addition, this volume: -- Presents the evidence for evolution, including how evolution can be observed today. -- Explains the nature of science through a variety of examples. -- Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. -- Answers frequently asked questions about evolution. Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council—and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators, and interested members of the community.

With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed—and the only guide of its kind—Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

All the resources you need to have success with Scott Foresman Science in one easy-to-use spiral-bound edition. Includes a Teacher's Resource Package CD-ROM.

Even science fair enthusiasts may dread grappling with these two questions:

1. How can you organise many middle school students doing many different projects at the same time?
2. How can you help students while giving them the freedom of choice and independence of thought that come with genuine inquiry?

Answer the questions—and face science fairs without fear—with the help of this book from the Science Fair Warm-Up series. This teachers guide lets you make best use of the original investigations and problem-solving exercises provided by each of the grade-appropriate student editions. The Science Fair Warm-Up series consists of three books; each book builds on the ideas introduced in the previous book, and the problems in the later books are progressively more challenging. The series' field-tested material will help your students develop the inquiry skills to carry their projects through—whether they're middle schoolers preparing for their first science fair or high schoolers ready for very challenging investigations

To save you time, the materials are organised to grow more challenging and encourage independent study as students progress through the grade levels. To help you meet your teaching goals, the series is based on the constructivist view that makes students responsible for their own learning and aligns with national standards and the new Framework for K–12 Science Education.

Science Fair Warm-Up will prepare both you and your students for science fair success. But even if you don't have a science fair in your future, the material can help make your students more proficient with scientific research.
