Since its introduction in 1979, CHEAPO, a computer based economic analysis program, has allowed users of the Stand Prognosis Model to evaluate silvicultural alternatives from an economic point of view. Subsequent modifications to the Prognosis Model have rendered CHEAP0 obsolete. This users guide covers a new computer model, CHEAP0 II, which is compatible with version 5.1 of the Prognosis Model and expands its economic analysis capabilities.

WILEY-INTERSCIENCE PAPERBACK SERIES The Wiley-Interscience Paperback Series consists of selectedbooks that have been made more accessible to consumers in an effortto increase global appeal and general circulation. With these newunabridged softcover volumes, Wiley hopes to extend the lives ofthese works by making them available to future generations ofstatisticians, mathematicians, and scientists. From the Reviews of A User's Guide to PrincipalComponents "The book is aptly and correctly named-A User'sGuide. It is the kind of book that a user at any level, novice orskilled practitioner, would want to have at hand for autotutorial,for refresher, or as a general-purpose guide through the maze ofmodern PCA." -Technometrics "I recommend A User's Guide to Principal Components toanyone who is running multivariate analyses, or who contemplatesperforming such analyses. Those who write

their own software willfind the book helpful in designing better
programs. Those who useoff-the-shelf software will find it invaluable
in interpreting theresults." -Mathematical Geology
This book arose from courses taught by the authors, and is designed
for both instructional and reference use during and after a first
course in algebraic topology. It is a handbook for users who want to
calculate, but whose main interests are in applications using the
current literature, rather than in developing the theory. Typical
areas of applications are differential geometry and theoretical
physics. We start gently, with numerous pictures to illustrate the
fundamental ideas and constructions in homotopy theory that are needed
in later chapters. We show how to calculate homotopy groups, homology
groups and cohomology rings of most of the major theories, exact
homotopy sequences of fibrations, some important spectral sequences,
and all the obstructions that we can compute from these. Our approach
is to mix illustrative examples with those proofs that actually
develop transferable calculational aids. We give extensive appendices
with notes on background material, extensive tables of data, and a
thorough index. Audience: Graduate students and professionals in
mathematics and physics.

The report contains the description of the MAD/I language and user's guide for MAD/I in MTS (Michigan Terminal System). The pre-defined MAD/I language, described in the report, is a procedure-oriented algebraic language designed for general-purpose use. It is styled after such languages as ALGOL 60, MAD, and PL/I. MAD/I is also intended as a convenient 'base' language for extension by a definitional facility. The language anticipates the definition (or re-definition) of: data types and structures, statements, operators and operations. The definitional facility itself is not described. The user's guide shows how to compile and run MAD/I programs in MTS. Sample runs are included. There is also a description of a compiler feature which allows assembler code for the IBM 360 to be compiled within a MAD/I program.

Recent radical changes in timecode technology, location shooting and post-production working practices have been brought about by the fragmentation of the television programme making industry and by a dramatic increase in affordable digital transmission and editing equipment and systems. With the expansion of non-traditional television service producers (cable, satellite and video-on-demand) almost anything hoes as far as shooting and editing formats are concerned. Timecode: A User's Guide is an indispensable reference for anyone needing to get to grips with the many aspects of timecode, whether in-house or on location. Taking into account these changes this book has now been brought completely up to date to include: * timecode and DVD, LTC & VITC in HANC packets in the serial digital TV interfaces * timecode in IEEE1395 (Firewire) * timecode and digital video cassettes * new recording formats of DVD, DV mini cassettes and D6 are included * 4:3 scanning for wide-screen films - standards updated * new material to cover new working practices * new appendices to cover the global LF time data transmissions and time data embedded in BBC transmissions Advice is also given on avoiding and remedying faults and errors.

ScaLAPACK is an acronym for Scalable Linear Algebra Package or Scalable LAPACK. It is a library of high-performance linear algebra routines for distributed memory message-passing MIMD computers and networks of workstations supporting parallel virtual machine (PVM) and/or message passing interface (MPI). It is a continuation of the LAPACK project, which designed and produced analogous software for workstations, vector supercomputers, and shared memory parallel computers. Both libraries contain routines for solving systems of linear equations, least squares problems, and eigenvalue problems. The goals of both projects are efficiency, scalability, reliability, portability, flexibility, and ease of use.

This book grew from a one-semester course offered for many years to a mixed audience of graduate and undergraduate students who have not had the luxury of taking a course in measure theory. The core of the book covers the basic topics of independence, conditioning, martingales, convergence in distribution, and Fourier transforms. In addition there are numerous sections treating topics traditionally thought of as more advanced, such as coupling and the KMT strong approximation, option pricing via the equivalent martingale measure, and the isoperimetric inequality for Gaussian processes. The book is not just a presentation of mathematical theory, but is also a discussion of why that theory takes its current form. It will be a secure starting point for anyone who needs to invoke rigorous probabilistic arguments and understand what they mean.
