

Secondary School Exam Papers

The book is a cutting-edge contribution to the debate which has occurred for some time on the pros and cons of secondary education becoming more closely and explicitly related to preparing young people for the world of work. The book provides concrete examples of the vocationalisation of secondary education, with particular reference to the situation in Africa. The target audience for the book includes policy-makers, practitioners, administrators, education planners, researchers, teachers and teacher educators with a concern about the relationship between secondary education and education for the world of work (with particular reference to technical and vocational education and training - TVET.) The book appears in the Springer book series on 'Technical and Vocational Education and Training: Issues, Concerns and Prospects' and compliments the 'International Handbook of Technical and Vocational Education and Training' and other publications in the 'International Library of TVET' all of which are publications of the 'UNESCO-UNEVOC International Centre for TVET' in Bonn, Germany

The problems in the Middle East run deeper than dictatorship. Inspired by the popular uprisings that overthrew the presidents of Tunisia and Egypt, Arabs across the Middle East are demanding change. But achieving real freedom will involve more than the removal of a few dictators. Looking beyond the turmoil reported on our TV screens, Guardian journalist Brian Whitaker examines the 'freedom deficit' that affects Arabs in their daily lives: their struggles against corruption, discrimination and bureaucracy, and the stifling authoritarianism that pervades homes, schools and mosques as well as presidential palaces. Drawing on a wealth of new research and wide-ranging interviews, Whitaker analyses the views of people living in the region and argues that in order to achieve peace, prosperity and full participation in today's global economy, Arabs should embrace not only political change but far-reaching social and cultural change as well. 'A passionate call for political and social change in Arab countries' -- Jeremy Bowen 'A call to arms for Arab citizens' -- International Affairs 'A lively, highly readable and illuminating survey of the countless things that are wrong with the Middle East today' -- Avi Shlaim, Guardian 'This is a writer willing to rattle a few cages... Detailed and well-documented' -- Huffington Post '[Should] be required reading by Arab elites from the Atlantic to the Gulf' Patrick Seale, Al Hayya

Whitaker spares no criticism of the region's governments' -- Egypt Today 'Outstanding and credible' -- Jordan Times

Study Skills and Dyslexia in the Secondary School

8th Pacific-Rim Symposium, PSIVT 2017, Wuhan, China, November 20-24, 2017, Revised Selected Papers

This book analyses the performance of South Asian educational systems and identifies the causes and correlates of student learning outcomes. Drawing on successful initiatives both in the region and elsewhere in the world, it offers an insightful approach to setting priorities for enhancing the quality of school education in South Asia. Increasingly dyslexia is becoming a whole-school issue. The responsibility for addressing the needs of dyslexic students no longer rests with one individual but is the responsibility of all school staff - subject specialists and school management. This timely book addresses this need by providing specific guidance to secondary school staff on how to support dyslexic students within different subject areas and within the principles and practices of inclusion.

Bulletin

This book constitutes the thoroughly refereed post-conference proceedings of the 8th Pacific Rim Symposium on Image and Video Technology, PSIVT 2017, held in Wuhan, China, in November 2017. The total of 39 revised papers was carefully reviewed and selected from 91 submissions. The Pacific-Rim Symposium on Image and Video Technology (PSIVT) is a high-quality series of symposia that aim at providing a forum for researchers and practitioners who are being involved, or are contributing to theoretical advances or practical implementations in image and video technology.

Includes universities, professional and technical schools.

Foucault and School Leadership Research illustrates the application of Foucauldian theory to an educational leadership research context, thus staging the ways a researcher negotiates the methodological tensions and contradictions in the conduct of qualitative inquiry within education research. The book draws on an empirical study of a multi-site school collaborative that investigates relations of power within the unfolding network among the various leadership hierarchies in school governance. The book is anchored around a narrative dramatization that the author, Denise Mifsud, crafts from her data, using the dramatic play as a medium to present her research findings so as to show rather than just tell readers about network leadership dynamics. Mifsud's innovative use of dramatization to communicate her findings and analysis serves to problematize the representation of qualitative research, as well as to incorporate researcher interpretation and explicate the intertwining nature of theory and methodology. Through the use of Foucauldian theory, mainly his notions of webs of power, discipline, governmentality, discourse, and subjectification, the research narrative critiques and problematizes traditional understandings of educational leadership. The book focuses on and demonstrates the challenging enterprise of the art of theory application in method by outlining the epistemological, operational and analytical challenges encountered: the application of Foucauldian concepts in education research contexts; the adaptation of methodological and theoretical concerns; in addition to showing how the quality of research outcomes is shaped by social theory.

The Health of the School Child

Cross-Curricular Approaches to Language Education

'An excellent companion to Learning to Teach in Secondary School ... full of good ideas and better advice ... Mentors will certainly want to use it, and so, I'm sure, will the rest of the history department ... Make sure they buy one, and keep your copy under lock and key.' - Michael Duffy, Times Educational Supplement 'A very well written and readable book. Overall, this is an excellent book and one which students and teachers outwith England would find a valuable addition to their library.' - Scottish Association of Teachers of History, Resources Review 'This book is without question the standard text for the history PGCE market.' - Dr Ian Davies, University of York, on the first edition. Learning to Teach History in the Secondary School provides an accessible introduction to teaching and learning history at secondary level. Underpinned by a theoretical perspective and backed up by the latest research, it encourages student teachers to develop a personal approach to teaching history. This fourth edition has been thoroughly updated for the new curriculum, with a brand new chapter on subject knowledge and a new section on action research to better support those reflecting on and developing their own practice. It provides an array of references and materials that give a sound theoretical foundation for the teaching of history, including weblinks to further resources, while a range of tasks will enable students to put their learning into practice in the classroom. Practical advice is combined with reference and access to a wide range of recent and relevant research in the field of history education, to support Masters Level research and aid reflective practice. Key issues covered include: The benefits of learning history planning The use of language and strategies for teaching Inclusion Technology in history teaching Assessment Continuing professional development Offering comprehensive and accessible support to becoming a history teacher, this book remains an invaluable resource for all training and newly qualified history teachers.

Secondary School External Examination Systems

Secondary school selection tests are used extensively by schools and educational authorities. How to Pass Secondary School Selection Tests contains hundreds of practice questions and reflects the format, content and level of difficulty of the majority of the tests.

In the context of outcomes-based school governance, statewide exit exams are often expected to have a positive effect on student achievements if schools and teachers use the performance feedback from the exams for school, instructional, and professional development. However, very little is known about whether the exams are used for development at all and how this is affected by factors in the exam system and organizational aspects of schools. In a comparison of Finland, Ireland, and the Netherlands, the study therefore investigates how different exam systems and their functions, the conditions at school level, and the use of the exams for school and classroom development are associated. The study uses expert interviews and a questionnaire survey with principals and teachers. The role statewide exit exams can play in education systems is analyzed from a governance perspective and a school development perspective and discussed with an international comparative view. Esther Dominique Klein, born in 1982, Dr. phil., is research assistant at the Faculty of Educational Sciences of the University of Duisburg-Essen. Her main research interests lie in the areas of school system and school development research and international comparative education.

Bridging Theory and Method

Current applied linguistic research generally supports the adoption of interdisciplinary approaches in education with the objective of enhancing learners' progress and teachers' practices. In this spirit, this edited volume explores the issue of cross-curricular learning and teaching from a wider perspective. The twenty-three papers collected here are categorised in four thematic units, all of which, however, share a common feature: they focus on interdisciplinary learning and promote the integration of knowledge and skills from various subject areas. As such, all the papers brought together in this volume, thus, emphasise the interconnectedness of knowledge and ideas in primary, secondary and tertiary education. The theme of Cross-Curricular Teaching and Learning is related in this volume to Intercultural Education, to Content and Language Integrated Learning, and to Information and Communication Technology (ICT). The book will be of interest to scholars who are interested in relevant research-based data and results, and to educators who wish to update their knowledge about cross-curricular teaching and improve their language teaching practices.

Whether you are contemplating private education or trying to secure a place in the best local school, this book will give you proven strategies for success. This book will help you pick a school in which your child will flourish, and give you the full low-down on how to play the system to secure your child's place. If your child faces an entrance exam or interview then thorough guide to tuition, coaching and performance -and .should you need it, there is a comprehensive guide to making a successful appeal. NOT GOT MUCH TIME? One, five and ten-minute introductions to key principles to get you started. AUTHOR INSIGHTS Lots of instant help with common problems and quick tips for success, based on the author's many years of experience. EXTEND YOUR KNOWLEDGE Extra online articles at www.teachyourself.com to give you a richer understanding of the school application process. THINGS TO REMEMBER Quick refreshers to help you remember the key facts. TRY THIS Innovative exercises illustrate what you've learnt and how to use it.

Research in Education

Teaching Chemistry in Higher Education celebrates the contributions of Professor Tina Overton to the scholarship and practice of teaching and learning in chemistry education. Leading educators in United Kingdom, Ireland, and Australia—three countries where Tina has had enormous impact and influence—have contributed chapters on innovative approaches that are well-established in their own practice. Each chapter introduces the key education literature underpinning the approach being described. Rationales are discussed in the context of attributes and learning outcomes desirable in modern chemistry curricula. True to Tina's personal philosophy, chapters offer pragmatic and useful guidance on the implementation of innovative teaching approaches, drawing from the authors' experience of their own practice and evaluations of their implementation. Each chapter also offers key guidance points for implementation in readers' own settings so as to maximise their adaptability. Chapters are supplemented with further reading and supplementary materials on the book's website (overtonfestschrift.wordpress.com). Chapter topics include innovative approaches in facilitating group work, problem solving, context- and problem-based learning, embedding transferable skills, and laboratory education—all themes relating to the scholarly interests of Professor Tina Overton. About the Editors: Michael Seery is Professor of Chemistry Education at the University of Edinburgh, and is Editor of Chemistry Education Research and Practice. Claire Mc Donnell is Assistant Head of School of Chemical and Pharmaceutical Sciences at Technological University Dublin. Cover Art: Christopher Armstrong, University of Hull

This book gives a brief overview of regional issues and the history of post-secondary education in Kazakhstan and describes the development of higher and tertiary education in the country since the transition began, along with a set of key recommendations for improvements.

A Practical Approach

Issue 102 September 11-17, 2002

What's Really Wrong with the Middle East

Higher Education Bulletin

This book is aimed at those who encounter secondary school students with dyslexia on a daily basis. It takes a practical approach by breaking down the whole process of assessing the issues involved and then suggesting ways for teaching staff and students to implement a suitable program of study skills. It is well structured, clear, useful and written with the needs of busy teachers and students very much in mind. Included are assessment approaches, checklists, photocopiable activities, and suggestions for useful resources. Results from qualitative research are included to provide an additional practical insight into study skills and dyslexia in the secondary school. Theoretical knowledge has been used to underpin and inform practice. Teachers of students with dyslexia who are not specialists should find this a useful guide. It will also be of great use to SENCOs and Teaching Assistants.

Fraud and Education gives an informative overview of cheating in examinations in the U.S. and foreign countries and of the current state of fraud in education and research. It differs however, from many popular treatises on the same subject, in that it is not intended as a blanket condemnation of American (or foreign) education. Instead of assigning blame for the prevalence of fraud, the authors point to such factors as growth in the number of persons engaged in education and research, pressures on individuals to succeed, improvements in communications (especially the Internet and e-mail), and in techniques of document reproduction.

Vocationalisation of Secondary Education Revisited

Summative assessment has been a contentious issue in educational circles for several decades, particularly high-stakes assessment events which arise at various junctures of the school cycle, especially those at the end of it. The French Baccalaureat and English A-Levels and their numerous clones throughout the francophone and anglophone worlds are household names and represent milestone events in people's lives, as their outcomes are principal determinants of young people's future prospects. These examinations are external—they are devised, conducted and processed by agencies outside the schools, usually ministerial examination units. As such, they act as 'blind' arbiters of student achievement, providing the proverbial 'level playing field' which ensures the comparability of outcomes. In the pyramidal school structures of yesteryear, examinations acted as filters, regulating the progression of pupils to subsequent tiers of formal education. Exit points occurred from primary school level up, from where unsuccessful candidates could enter the labour force and/or embark on occupationally specific further education and training. With the modernisation of the labour market and an ever-higher social demand for access to higher levels of formal education, the filtering function of examinations at lower levels of schooling has been gradually eroded, while burgeoning numbers of students at the upper secondary level have brought about reforms that include curricular diversification and sometimes radical overhauls of terminating assessment systems (including the modification and, in some instances, abandonment of external examinations). This edited volume brings together the experiences of twenty examination systems from around the world to show how these dynamic entities have adapted over time to the changing context of schooling. Following an introduction by Stephen P. Heyneman of World Bank repute, there are sixteen chapters presenting Country Case Studies, which have been written up under common subheadings, thereby highlighting the comparative nature of the work and facilitating cross-referencing. The subsequent four chapters elaborate on the theme of 'external examinations beyond national borders', including a contribution by the International Baccalaureate Organisation. A defining feature of the work is the attention it pays to what it calls the 'nuts and bolts' of external examinations, from question-setting to grading procedures. These are, it is argued, instrumental in nurturing and maintaining public confidence in external examinations. The book will be of immense value to people involved in educational policy studies, especially strategic educational planning, as well as those directly concerned with formal assessment. The work has been written to appeal to a wide audience of informed persons—it is accessible to teachers and interested laypeople, as well as to academics."
