Detective Chief Inspector Ryan retreats to Holy Island seeking sanctuary when he is forced to take sabbatical leave from his duties as a homicide detective. A few days before Christmas, his peace is shattered and he is thrust back into the murky world of murder when a young woman is found dead amongst the ancient ruins of the nearby Priory. When former local girl Dr Anna Taylor arrives back on the island as a police consultant, old memories swim to the surface making her confront her difficult past. She and Ryan struggle to work together to hunt a killer who hides in plain sight, while pagan ritual and small-town politics muddy the waters of their investigation.

The third in the bestselling Richard Jury mystery series by Martha Grimes. A spinster whose passion was bird-watching, a dotty peer who pinched pennies, and a baffling murder made the tiny village of Littlebourne a most extraordinary place. And a severed finger made a ghastly clue in the killing that led local constables from a corpse to a boggy footpath to a beautiful lady's mansion. But Richard Jury refused, preferring to take the less traveled route to a slightly disreputable pub, the Anodyne Necklace. There, drinks all around loosened enough tongues to link a London mugging with the Littlebourne murder and a treasure map that would chart the way to yet another chilling crime.

Humanity has long been fascinated by the planet Mars. Was its climate ever conducive to life? What is the atmosphere like today and why did it change so dramatically over time? Eleven spacecraft have successfully flown to Mars since the Viking mission of the 1970s and early 1980s. These orbiters, landers and rovers have generated vast amounts of data that now span a Martian decade (roughly eighteen years). This new volume brings together the many new ideas about the atmosphere and climate system that have emerged, including the complex interplay of the volatile and dust cycles, the atmosphere-surface interactions that connect them over time, and the diversity of the planet's environment and its complex history. Including tutorials and explanations of complicated ideas, students, researchers and non-specialists alike are able to use this resource to gain a thorough and up-to-date understanding of this most Earth-like of planetary neighbours.

The Oxford Handbook of National Security Intelligence is a state-of-the-art work on intelligence and national security. Edited by Loch Johnson, one of the world's leading authorities on the subject, the handbook examines the topic in full, beginning with an examination of the major theories of intelligence. It then shifts its focus to how intelligence agencies operate, how they collect information from around the world, the problems that come with transforming "raw" information into credible analysis, and the difficulties in disseminating intelligence to policymakers. It also considers the balance between secrecy and public accountability, and the ethical dilemmas that covert and counterintelligence operations routinely present to intelligence agencies. Throughout, contributors factor in broader historical and political contexts that are integral to understanding how intelligence agencies function in our information-dominated age. The book is organized into the following sections: theories and methods of intelligence studies; historical background; the collection and processing of intelligence; the analysis and production of intelligence; the challenges of intelligence dissemination; counterintelligence and counterterrorism; covert action; intelligence and accountability; and strategic intelligence in other nations.

Having long experienced unexplained symptoms of dizziness and lethargy that neither medications nor holistic or Ayurvedic treatments have helped, she embraces the news with tears of relief: with a simple surgery, she can regain her strength and joyful spirit. But fate can be mischievous, and to err is human—even for surgeons. Rather than improve after surgery, her condition worsens. On the Way to Casa Lotus is the gripping true story of Junco Margain's journey coming to terms with the permanent consequences of a surgeon's devastating mistake. From New York Times bestselling author Kate White comes a gripping novel about one woman's dangerous quest to recover lost memories someone would rather she never find. The key to her missing memories could bring relief—or unlock her worst nightmares. On a cold, rainy morning, finance journalist Ally Linden arrives soaked to the bone at her Manhattan office, only to find that she's forgotten her keycard. When her boss shows, he's shocked to see her—because, he explains, she hasn't worked there in five years. Ally knows her name, but is having trouble coming up with much

beyond that, though after a trip to the psychiatric ER, she begins to piece together important facts: she lives on the Upper West Side; she's now a freelance journalist; she's married to a terrific man named Hugh. More memories materialize and yet she still can't recall anything about the previous two days. Diagnosed as having experienced a dissociative state, she starts to wonder if it may have been triggered by something she saw. Could she have witnessed an accident—or worse—had something happened to her? Desperate for answers, Ally tries to track where she spent the missing days, but every detail she unearths points to an explanation that's increasingly ominous, and it's clear someone wants to prevent her from learning where those forty-eight hours went. In order to uncover the truth, Ally must dig deep into the secrets of her past—and outsmart the person who seems determined to silence her.

This book addresses the point of intersection between cognition, metacognition, and culture in learning and teaching Science, Technology, Engineering, and Mathematics (STEM). We explore theoretical background and cutting-edge research about how various forms of cognitive and metacognitive instruction may enhance learning and thinking in STEM classrooms from K-12 to university and in different cultures and countries. Over the past several years, STEM education research has witnessed rapid growth, attracting considerable interest among scholars and educators. The book provides an updated collection of studies about cognition, metacognition and culture in the four STEM domains. The field of research, cognition and metacognition in STEM education still suffers from ambiguity in meanings of key concepts that various researchers use. This book is organized according to a unique manner: Each chapter features one of the four STEM domains and one of the three themes—cognition, metacognition, and culture—and defines key concepts. This matrix-type organization opens a new path to knowledge in STEM education and facilitates its understanding. The discussion at the end of the book integrates these definitions for analyzing and mapping the STEM education research.
