The book traces Conor Jameson's travels in search of the Goshawk, a magnificent yet rarely seen (in Britain at least) raptor. Each episode of the narrative arises from personal experience, investigation, and the unearthing of information from research, exploration and conversations. The journey takes him from an encounter with a stuffed Goshawk in a glass case, through travels into supposed Goshawk territories in Britain, to Berlin - where he finds the bird at ease in the city.

Why, he wants to know, is the bird so rarely seen in Britain? He explores the politics of birdwatching, the sport of falconry and the impact of persecution on the recent history of the bird in Britain and travels the length of Britain, through central Europe and the USA in search of answers to the goshawk mystery. Throughout his journey he is inspired by the writings of T H White who told of his attempts to tame a Goshawk in his much-loved book. It's a gripping tale on the trail of a most mysterious and charismatic bird. The Insider dominated the media on publication in March

2005 and instantly became a No.1 bestseller. Not only did it fill thousands of column inches with its revelations about prominent political and showbiz figures, it was critically acclaimed across the broadsheets for its unique and fascinating insight into the worlds of celebrity, royalty, politics and the media. Piers Morgan was made editor of the News of the World, the UK's biggest-selling Sunday newspaper at the record-breaking age of 28. The decade that followed was one of the most tumultuous in modern times. In a world of indiscreet dinners, private meetings and

gossipy lunches, Piers Morgan found himself in the thick of it. His diaries from this remarkable period reveal astonishing and hilarious encounters with an endless list of celebrities and politicians alike: Diana, William, Charles and Camilla; Tony Blair, Cherie, Gordon Brown; Paul McCartney, George Michael and Elton John; Jeremy Clarkson, Paula Yates and Gazza to name just a few. Entertaining, engaging and compulsive, *The Insider* was the most talked-about book of 2005, blowing apart every notion we have of politics, media and celebrity.

The 1960s was a tumultuous period in the history of Greece, as its democracy fell under the forced establishment of a military dictatorship. The regime of the colonels was the culmination of national division and hostility between communist forces and right wing militants. It was in these extraordinary times that British historian Richard Clogg witnessed the 1967 coup, while living in Athens and researching modern Greek history. Following his abrupt immersion in Greek politics and

political activism, Clogg went on to a joint appointment at the School of Slavonic and East European Studies (SSEES) and King's College, London. At SSEES, he uncovered the contested history of nationalist funding in academia and postings. After publishing his controversial book *Politics and the Academy*, Clogg moved to St Antony's College, Oxford. *Greek to Me: A Memoir of Academic Life* is an engrossing tale of academic and political intrigue, spanning Clogg's time in Greece and in the Department of Byzantine and Modern Greek Studies at King's College London. Through extensive personal archives of his fascinating adventures, Clogg exposes the secretive fields of academia and

university politics as well as providing unique eyewitness accounts of modern Greek history. The book offers a comprehensive look at college preparatory boarding schools in the United States, Canada, and the United Kingdom through the eyes of recent graduates who are now attending prestigious colleges and universities such as Harvard, MIT, Princeton, Yale, Oxford, and Cambridge. The approach is distinctive, giving readers the opportunity to get the real “inside story” from their peers and learn more about what the schools are like than the youngsters and their parents could learn in a campus visit or standard guidebook. The book does a great job presenting a wealth

of information in a diverse array of voices. Student readers will no doubt feel that the reviewers quoted in the book shared many of their questions and concerns as students, and parents are likely to appreciate the frankness of the reviewers' comments as well. Excerpts from the book: "My college counselor also had good relationships with college admissions officers and was able to update me on how they'd reacted to my applications. In the end, I applied to Harvard, MIT, Stanford, Harvey Mudd, and Caltech (California Institute of Technology), and I got into all of them, so I was happy with my college counselor's efforts (and the efforts of the CCO as a whole) in promoting my application, as well as

in helping me decide where I wanted to go." - MIT student "Students at Groton tend to be either very smart, very rich, or both (because some people just seem to have it all). Many kids have attended private schools their whole lives. The school favors well-rounded individuals. Athletic recruits also have to be intelligent. In my time at Groton, the kids who were not motivated enough to get through the school's rigors ended up leaving. The admissions process requires an interview, during which I recommend candidates dress conservatively while showing themselves to be original thinkers." - Harvard student "The British exam system is, for the most part, based on assessment objectives: tick the boxes

and you're guaranteed a great result. At Eton, while you are taught to tick the boxes, this is merely a preliminary measure: the emphasis in on going beyond the exam and enjoying the subject in all its depth” - Oxford student "Gaining admission to St. Albans can prove quite difficult, because it is arguably the most selective school in the Washington, D.C., area. However, distinguishing oneself above other applicants is no mystery. Performing well on the SSATs and the ISEEs certainly helps the admissions officers look at an applicant more favorably. However, the dynamic applicant that St. Albans seeks extends far beyond standardized tests." - University of Pennsylvania

recipe for apple pie means answering some big questions: What is matter really made of? How did it escape annihilation in the fearsome heat of the Big Bang? And will we ever be able to understand the very first moments of our universe? In How to Make an Apple Pie from Scratch, Harry Cliff—a University of Cambridge particle physicist and researcher on the Large Hadron Collider—sets out in pursuit of answers. He ventures to the largest underground research facility in the world, deep beneath Italy's Gran Sasso mountains, where scientists gaze into the heart of the Sun using the most elusive of particles, the ghostly neutrino. He visits CERN in Switzerland to explore the "Antimatter Factory," where the stuff of science fiction is manufactured daily (and we're close to knowing whether it falls

up). And he reveals what the latest data from the Large Hadron Collider may be telling us about the fundamental nature of matter. Along the way, Cliff illuminates the history of physics, chemistry, and astronomy that brought us to our present understanding—and misunderstandings—of the world, while offering readers a front-row seat to one of the most dramatic intellectual journeys human beings have ever embarked on. A transfixing deep dive into the origins of our world, How to Make an Apple Pie from Scratch examines not just the makeup of our universe, but the awe-inspiring, improbable fact that it exists at all. An ideal reference guide to introducing the IB Diploma in your school.

Dismissed by the Tories as 'cranks and gadflies', the United Kingdom Independence Party (UKIP) has, in a short period of time, become the fourth-largest party in UK politics. This book looks at the rise of UKIP, exploring both its origins and its history.

Schooling and Social Change in England since 1760 offers a powerful critique of the situation of British education today and shows the historical processes that have helped generate the crisis confronting policymakers and practitioners at the present time. The book identifies the key phases of economic and social change

since 1760 and shows how the education system has played a central role in embedding, sustaining and deepening social distinctions in Britain. Covering the whole period since the first industrialization, it gives a detailed account of the development of a deeply divided education system that leads to quite separate lifestyles for those from differing backgrounds. The book develops arguments of inequalities through a much-needed account of the changes in education. This book will be of great interest for academics, scholars and post-

graduate students in the field of history of education and education politics. It will also appeal to administrators, teachers and policy makers, especially those interested in the historical development of schooling.

curriculum, this book takes the position that a major, but shamefully neglected, goal of science and technology education is to equip students with the knowledge, skills, attitudes and values to confront the complex and often ill-defined socioscientific issues they encounter in daily life as citizens in an increasingly technology-dominated world carefully, critically, confidently and responsibly. In outlining proposals for addressing socioscientific issues through a curriculum organized in terms of four increasingly sophisticated levels of consideration, the

author adopts a highly critical and politicized stance towards the norms and values that underpin both scientific and technological development and contemporary scientific, engineering and medical practice, criticizes mainstream STS and STSE education for adopting a superficial, politically naïve and, hence, educationally ineffective approach to consideration of socioscientific issues, takes the view that environmental problems are social problems occasioned by the values that underpin the ways in which we choose to live, and urges teachers to encourage students to

reach their own views through debate and argument about where they stand on major socioscientific issues, including the moral-ethical issues they often raise. More controversially, the author argues that if students are to become responsible and politically active citizens, the curriculum needs to provide opportunities for them to experience and learn from sociopolitical action. The relative merits of direct and indirect action are addressed, notions of learning about action, learning through action and learning from action are developed, and a case is

made for compiling a user-friendly database reflecting on both successful and less successful action-oriented curriculum initiatives. Finally, the book considers some of the important teacher education issues raised by this radically new approach to teaching and learning science and technology. The book is intended primarily for teachers and student teachers of science, technology and environmental education, graduate students and researchers in education, teacher educators, curriculum developers and those responsible for educational

policy. The author is Emeritus Professor of Science Education at the Ontario Institute for Studies in Education (University of Toronto), Adjunct Professor of Science Education at the University of Auckland and Visiting Professor of Science Education at the University of Hong Kong. His research interests include considerations in the history, philosophy and sociology of science and their implications for science and technology education, STSE education and the politicization of both students and teachers, science curriculum history,
