The mhGAP Intervention Guide (mhGAP-IG) for Mental, Neurological and Substance-use Disorders for Non-specialist Health Settings, is a technical tool developed by WHO to assist in implementation of mhGAP. The Intervention Guide has been developed through a systematic review of evidence followed by an international consultative and participatory process. The mhGAP-IG presents integrated management of priority conditions using protocols for clinical decision-making. The priority conditions included are: depression, psychosis, bipolar disorders, epilepsy, developmental and behavioural disorders in children and adolescents, dementia, alcohol use disorders, drug use disorders, self-harm/suicide and other significant emotional or medically unexplained complaints. The mhGAP-IG is a

model guide and has been developed for use by health-care providers working in non-specialized health-care settings after adaptation for national and local needs.

This overview of interactive videodisc technology is designed to assist educators in finding the appropriate equipment and software for any specific application. The handbook may also serve as a starting point for many educators who know nothing of the technology and assist them in deciding whether this technology is worth pursuing as an educational tool in specific situations. Although not comprehensive, the listings reflect a good portion of the videodisc-related products available today and the prices provide a good indication of the general price range of specific items. The handbook contains 10 chapters: (1) Introduction to Videodiscs; (2) Overview of Laser Disc Systems; (3) Selecting a Laser Videodisc Player; (4) Video Playback Units; (5) Videodisc Interface Units; (6) Disc Player Peripherals; (7) Videodisc System Packages; (8) Educational Videodisc Software; (9) Interactive Videodisc Authoring Languages; and (10) Videodisc Care and Maintenance. Appendices include directories of laser disc players; television monitors and projects; laser disc interfaces; laser disc peripherals; laser disc system packages; videodisc software (listed by subject area); videodisc mastering options; interactive authoring languages; service information; and videodisc resources, which includes a manufacturer's index. In the early morning hours of August 13, 2018, in the small, quiet Colorado town of Frederick, after murdering his family, Chris Watts calculatingly and coldly put his girls in oil battery tanks and buried his pregnant wife in a shallow grave, then returned to work like nothing happened. Chris ultimately pled guilty to the murders, and he is currently serving multiple life sentences. While in prison, Chris receives tons of mail--from family and friends but also fans. Author Cheryl Cadle decided that, after a calling from God, she would write to Chris and ask him if she could write a book about his story. Surprisingly, he wrote back. After a few back-and-forth letters, Chris sent the paperwork to Cheryl to be put on the visitors' list. She then visited him and they talked about her writing a book. After visiting him, he told Cheryl he wanted to tell her his confessions in writing because he felt their conversations were being recorded. He has revealed things to her that no one else knows, not even the FBI. Some of these details will be completely shocking for you to hear. Letters from Christopher is a true crime story with important information to put the pieces of the puzzle together for inquiring minds. Read herein the completely truthful account of what happened to Shanann, Bella, Celeste, and Nico Watts. About the Author New and upcoming author Cheryl Cadle lives in the Midwest with her husband of 47 years, three children and their spouses, and eleven grandchildren. She loves to write, play golf, camp, and travel. Her most favorite pastime is spending time with her grandchildren. She loves true crime stories.

For the last four decades, Tedric Harris' Rolling Bearing Analysis has been the "bible" for engineers involved in rolling bearing technology. Why do so many students and practicing engineers rely on this book? The answer is simple: because of its complete coverage from low-to high-speed applications and full derivations of the underlying mathematics from a leader in the field. The fifth edition of this classic reference is divided conveniently into two volumes, each focused on a specialized area of bearing technology. This option allows you to select the coverage that is best suited to your needs. The second of two books, Advanced Concepts of Bearing Technology steps up the level to more dynamic and complex loading, more extreme operating conditions, and higher-speed applications. The authors examine several topics that are unique to the book, including mathematical relationships for internal load distribution under conditions of high speed, combined radial, axial, and moment loading, as well as the effects of raceway and roller profiling. They also delve into the mathematical development of

rolling element-raceway lubricant film thickness and contact friction, the stress-life method for calculating bearing fatigue endurance, and the effects of shaft and supporting structure flexure on bearing loading and deflection. Advanced Concepts of Bearing Technology is the perfect aid for analyzing complex performance and fatigue-life phenomena in advanced applications.

The second, fully updated edition of this book applies and contextualizes up-to-date information on pediatric surgery for low and middle-income countries (LMICs). The book is organized in general anatomic and thematic sections within pediatric surgery, such as urology, oncology, orthopedics and gastroenterology and includes chapters addressing the unique challenges and approaches for pediatric surgery in low-resource settings. Each chapter has dual authorship LMIC author providing context-specific insights and authors from high-income countries (HICs) contributing experience from well-resourced settings. Written in a reader-friendly format, this book has a uniform structure in each chapter, with introduction, demographics, etiology, pathophysiology, clinical presentations, investigations, management, outcome, prevention, ethics, evidence-based surgery and references. This comprehensive volume fills the gap between up-to-date pediatric surgical scholarship and knowledge developed and applied in HICs, and the practical needs of practitioners in low-resource settings. This is an indispensable guide for postgraduate surgical trainees in Africa and other LMICs as well as general surgeons practicing in Africa and other LMICs, who need to care surgically for children.

This comprehensive resource provides readers with the tools necessary to perform analysis of various waveforms for use in radar systems. It provides information about how to produce synthetic aperture (SAR) images by giving a tomographic formulation and implementation for SAR imaging. Tracking filter fundamentals, and each parameter associated with the filter and how each affects tracking performance are also presented. Various radar cross section measurement techniques are covered, along with waveform selection analysis through the study of the ambiguity function for each particular waveform from simple linear frequency modulation (LFM) waveforms to more complicated coded waveforms. The text includes the Python tool suite, which allows the reader to analyze and predict radar performance for various scenarios and applications. Also provided are MATLAB® scripts corresponding to the Python tools. The software includes a user-friendly graphical user interface (GUI) that provides visualizations of the concepts being covered. Users have full access to both the Python and MATLAB source code to modify for their application. With examples using the tool suite are given at the end of each chapter, this text gives readers a clear understanding of how important target scattering is in areas of target detection, target tracking, pulse integration, and target discrimination. Cognitive behavior therapy (CBT) is arguably the most effective psychotherapy model for children and adolescents with emotional disorders (e.g., anxiety, depression, obsessive-compulsive disorders, trauma and stress-related disorders, etc.). Emotional disorders in youth frequently overlap or co-occur, and yet many of the existing, effective therapies available for children and adolescents with emotional disorders target just one or a smaller subset of these problems. The Unified Protocols for Transdiagnostic Treatment of Emotional Disorders in Children and Adolescents, based in groundbreaking research from Jill Ehrenreich-May, David H. Barlow, and colleagues, suggest that there may be a simpler and more efficient method of utilizing effective strategies, such as those commonly included in CBT, in a manner that addresses the broad array

of emotional disorder symptoms in children and adolescents. The child and adolescent Unified Protocols do this by framing effective strategies in the general language of strong or intense emotions, more broadly, and by targeting change through a common lens that applies across emotional disorders. Specifically, the child and adolescent Unified Protocols help youth by allowing them to focus on a straightforward goal across emotional disorders: reducing intense negative emotion states by extinguishing the distress and anxiety these emotions produce through emotion-focused education, awareness techniques, cognitive strategies, problem-solving and an array of behavioral strategies, including a full-range of exposure and activation techniques. The Unified Protocol for children and adolescents comprises a Therapist Guide, as well as two Workbooks, one for children, and one for adolescents.

Drug dependence is a complex, chronic, relapsing condition that is often accompanied by severe health, psychological, economic, legal, and social consequences. Injecting drug users are particularly vulnerable to HIV and other bloodborne infections (such as hepatitis C) as a result of sharing contaminated injecting equipment. All drug-dependent individuals, including injecting drug users (IDUs), may be at increased risk of HIV infection because of high-risk sexual behaviors. There are an estimated 13.2 million injecting drug users (IDUs) world-wide—78 percent of whom live in developing or transitional countries. The sharing of contaminated injecting equipment has become a major driving force of the global AIDS epidemic and is the primary mode of HIV transmission in many countries. In some cases, epidemics initially fueled by the sharing of contaminated injecting equipment are spreading through sexual transmission from IDUs to non-injecting populations, and through perinatal transmission to newborns. Reversing the rise of HIV infections among IDUs has thus become an urgent global public health challenge—one that remains largely unmet. In response to this challenge, the Institute of Medicine convened a public workshop in Geneva in December 2005 to gather information from experts on IDU-driven HIV epidemics in the most affected regions of the world with an emphasis on countries throughout Eastern Europe, the Commonwealth of Independent States, and significant parts of Asia. Experts from other regions also provided information on their experiences in preventing HIV infection among IDUs. This report provides a summary of the workshop discussions. Preventing HIV Infection among Injecting Drug Users in High Risk Countries describes the evidence on the intermediate outcomes of drug-related risk and sex-related risk prior to examining the impact on HIV transmission. This report focuses on programs that are designed to prevent the transmission of

HIV among injecting drug users. These programs range from efforts to curtail non-medical drug use to those that encourage reduction in high-risk behavior among drug users. Although the report focuses on HIV prevention for IDUs in high-risk countries, the Committee considered evidence from countries around the world. The findings and recommendations of this report are also applicable to countries where injecting drug use is not the primary driver, but in which injection drug use is nevertheless associated with significant HIV transmission.

EMQs are a popular method of assessing how broad a knowledge of medicine an undergraduate has acquired. They can, however, be difficult to prepare for, and the best way to build understanding and confidence is with practice. Presenting 100 key EMQs covering the core areas of medicine and surgery, care had been taken by the authors to structure the questions and answers so that they reflect accurately the themes uncountered during study and, specifically, in final exams. Each subject covered is accompanied by a revision section which summarises key points and cross references them to other questions for revision purposes. Questions related to pharmacology, an area which many students find particularly challenging, are threaded throughout the book where relevant, mirroring the integrated teaching methods common to most medical schools. The second edition of EMQs in Clinical Medicine has been thoroughly revised and updated to reflect medical developments, while retaining the clear and comprehensive

approach and popular revision boxes of its predecessor. The authors' first-hand experience of EMQ-based examinations, and awareness of the importance of reliable and accurate revision guides to medical students, ensure EMQs in Clinical Medicine remains an invaluable resource for all medical students undertaking the clinical part of their training, and an ideal companion during finals preparation.

Radicalization, Terrorism, and Conflict is a collection of scholarly works, authored by international researchers and leading thinkers, addressing contemporary, history-making issues in international security and terrorism from an interdisciplinary perspective. Contributors to this edited volume represent global perspectives, ideas, analysis, and research. Radicalization, Terrorism, and Conflict transmits relevant findings, theory, and policy ideas for scholars of security and terrorism studies, for policy makers, and to the general public who are interested in keeping up with this global area of concern. It provides a jumping-off point for conversation and collaboration that can lead to new knowledge and broader understanding. As an interdisciplinary collection of manuscripts, this book integrates and synthesizes theory, research, and public policy analysis in an effort to solve the complex questions and problems presented by this topic. Recognition of the need to approach the problems of radicalization, terrorism, and interpersonal conflict from an interdisciplinary perspective is gaining strength within academic settings, policy institutes, and global conferences. Unlike most recent edited books on the subject that are on the market at this time, Radicalization, Terrorism, and Conflict provides an interdisciplinary approach to understanding related current issues. This approach encourages a broader perspective and thought process, trans-discipline and global collaboration and cooperation, and an integrated synthesis of knowledge. Radicalization, Terrorism, and Conflict opens with an analysis of the ongoing phenomenon of the Arab Spring. In Section 1, contributors look at how players in the theatres of local and international terror become radicalized. Section 2 analyzes how terrorism becomes manifest in the global theatre and how governments and their actors attempt to prevent it. Section 3 presents research to bring understanding to the actors' behavior and provide settings for future collaboration in understanding these phenomena.
