Biomedical scientists are the foundation of modern healthcare, from cancer screening to diagnosing HIV, from blood transfusion for surgery to food poisoning and infection control. Without biomedical scientists, the diagnosis of disease, the evaluation of the effectiveness of treatment, and research into the causes and cures of disease would not be possible. The Fundamentals of Biomedical Science series has been written to reflect the challenges of practicing biomedical science today. It draws together essential basic science with insights into laboratory practice to show how an understanding of the biology of disease is coupled to the analytical approaches that lead to diagnosis. Assuming only a minimum of prior knowledge, the series reviews the full range of disciplines to which a Biomedical Scientist may be exposed - from microbiology to cytopathology to transfusion science. The series:- Understands the complex roles of Biomedical Scientists in the modern practice of medicine.- Understands the development needs of employers and the Profession.- Addresses the need for understanding of a range of fundamental sciences in the context of Biomedicine.- Places the theoretical aspects of Biomedical Science in their practical context via clinical case studies. Medical Microbiology covers a range of key laboratory techniques used in the diagnosis of important human diseases caused by microorganisms. From sample collection, through to analysis and laboratory investigation, the text covers a wide range of procedures and highlights how and why results

aregenerated. The third edition has been expanded to cover a wider range of topics, including a new chapter on Whole Genome Sequencing and extended coverage of syphilis and MALDI.

This case-based approach to the intensive care medicine curriculum provides 48 case studies linking core knowledge to clinical context. Topics chosen have been mapped to eight key areas of study, making this ideal for both FFICM and EDIC exam candidates. Cardiac disorders are an exciting area of classic pathology and recently defined disease. Cardiac Pathology: A Guide to Current Practice discusses the various disorders and also provides a backdrop of developmental embryology, diagnostic imaging and current therapeutics. Cardiac Pathology: A Guide to Current Practice aims to deliver in bench-book format a comprehensive overview of cardiac pathology that is relevant to those practicing in surgical pathology and autopsy arenas. Clear illustrations of the common styles of dissection are provided along with the normal anatomy and histology. Chapters cover the approach to the autopsy heart, ischemic heart disease, myocarditis, sudden death, valvular disease, transplant pathology, cardiomyopathy, cardiac neoplasia and congenital heart disease with a clear analysis of diagnostic criteria (macroscopic, microscopic and genetic) for both common cardiac diseases and those of rare format. The text is accompanied by high-quality macroscopic and microscopic images and references to other in-depth specialty data sources. Although aimed in particular at pathologists, Cardiac Pathology: A Guide to Current Practice should also be of value to cardiologists,

cardiothoracic surgeons and other professions allied to medicine.

Sheffield Teaching Hospitals NHS Trust is a three star trust. It was formed on 1 April 2001, following the merger of Northern General Hospital and Central Sheffield University Hospitals NHS Trust. The new trust is a large and complex organisation, incorporating the Royal Hallamshire Hospital, Northern General Hospital, Jessop Wing, Weston Park Hospital and Charles Clifford Dental Hospital. It is one of the largest NHS Trusts in the UK, employing over 12,000 staff with an annual revenue budget in excess of £420 million. For this report, CHI looked at clinical governance in the trust and spoke to staff in three clinical teams: stroke, colorectal cancer and gynaecology disorders. CHI concluded that the human resources (HR) strategy needs to be implemented. The trust needs to develop and implement an education and training strategy, and associated policies. The backlog of unfiled patient information needs to be resolved urgently. Communication

between referring clinicians from local hospitals and trust clinicians needs to be reviewed and improved. Communication within and between directorates needs to be improved to facilitate the sharing of best practice. The trust needs to further improve discharge arrangements for patients in partnership with other members of the health and social care community.

This practical guide for occupational therapists introduces a tried and tested method for moving from assessment to intervention, by formulating plans and measurable goals using the influential Model of Human occupation (MOHO). Section 1 introduces the concept of formulation – where it comes from, what it involves, why it is important, and how assessment information can be guided by theoretical frameworks and organised into a flowing narrative. Section 2 provides specific instructions for constructing occupational formulations using the Model of Human Occupation. In addition, a radically new way for creating aspirational goals is introduced - based on a simple acronym - which will enable occupational therapists to measure sustained changes rather than single actions. Section 3 presents 20 example occupational formulations and goals, from a wide range of mental health, physical health and learning disability settings, as well as a prison service, and services for homeless people and asylum seekers. Designed for practising occupational therapists and

occupational students, this is an essential introduction for all those who are looking for an effective way to formulate plans and goals based on the Model of Human Occupation.

This highly successful textbook is internationally renowned as a core text for trainee anaesthetists and is essential reading for candidates for the Fellowship of Royal College of Anaesthetists and similar examinations. The previous 6th edition was awarded First Prize at the BMJ Medical Book awards. The book provides full coverage of the sciences underpinning practice in anaesthesia, critical care and pain management together with details of clinical anaesthesia and perioperative care. In combining these aspects, anaesthetists new to the specialty have found the textbook particularly useful during the first few years of training as well as when preparing for professional examinations. It has also proved a valuable day-to-day reference for allied professionals such as operating department practitioners and physician assistants who need an understanding of clinical practice in anaesthesia and related specialties. The goal for this Seventh Edition has remained to equip the reader with the basic knowledge and practical considerations required to administer anaesthesia and perioperative care for a whole range of surgical conditions in patients with

all common medical comorbidities. Reflecting the expanding role of anaesthesia beyond the operating theatre it also includes essential material related to safety and quality assurance, consent, resuscitation, intensive care medicine, pre-hospital care and chronic pain management. This book's scope includes the full range of clinical practice, from anaesthetic equipment and pre-operative assessment through to post-operative care, local anaesthesia, anaesthesia for individual specialties and the management of chronic pain. The text covers the principles of pharmacology, anaesthetic agents and physics for the anaesthetist. Thirty new contributors provide a new perspective or contribute new chapters to this edition. This edition has been restructured into four sections: Basic Sciences; Physics and Apparatus; Fundamentals of Anaesthesia and Perioperative Medicine; and Clinical Anaesthesia. Four new chapters have been added, both to reflect the UK postgraduate anaesthetic examination syllabus and changes in clinical practice. There are: The older patient; Anaesthesia in low and middle-income areas; Management of critical incidents; and Data analysis, clinical trials and statistics. This edition makes extensive use of new line drawings and diagrams and, for the first time, many of these are available in colour. Chapters have been extensively

cross-referenced to aid the reader and avoid repetition to include substantially more information without increasing the overall size of the book.

"I would definitely recommend this book to all staff with an interest and involvement in intravenous drug therapy." —The Pharmaceutical Journal

"There is no doubt that nurses will find this small book useful. It should be available for consultation in any clinical area where drugs are administered to patients by the injectable routes." —Journal of Clinical Nursing

Respiratory diseases affect a large proportion of the population and can cause complications when associated with pregnancy. Pregnancy induces profound anatomical and functional physiological changes in the mother, and subjects the mother to pregnancy-specific respiratory conditions. Reviewing respiratory conditions both specific and non-specific to pregnancy, the book also addresses related issues such as smoking and mechanical ventilation. Basic concepts for the obstetrician are covered, including patient history, physiology and initial examinations. Topics such as physiological changes during pregnancy and placental gas

exchange are discussed for the non-obstetrician. Guidance is practical, covering antenatal and post-partum care, as well as management in the delivery suite. An essential guide to respiratory diseases in pregnancy, this book is indispensable to both obstetricians and non-obstetric physicians managing pregnant patients.

Lessons from Medicolegal Cases in Obstetrics and Gynaecology

Obstetrics and gynaecology is the biggest area of medical litigation, with compensation pay-outs exceeding the rest of medicine combined. Many specialists working in the field will be sued over their professional lifetime - having an increased awareness of past cases and their implications will reduce the risk of future litigation. Using landmark cases in the field, this book covers scenarios such as multiple pregnancy, hysterectomy and breech delivery, describing factors that have led to litigation. Chapters are structured clearly, beginning with case commentaries detailing both a successful and unsuccessful claim. This section is followed by legal commentary explaining the relevant laws and the verdict, finally giving a clinical commentary provided by experts in the

field which focuses on best practice to avoid litigation. Edited by an accredited expert witness in the field and a barrister specialising in medical law, this is an invaluable resource for clinicians and lawyers alike.

This learning report describes the work undertaken by two NHS trusts as part of the Health Foundation's Flow Cost Quality programme. It illustrates the problems created by poor flow that the programme was set up to address, and provides practical examples of how focusing on flow can improve quality, use available capacity effectively and save money. The report summarises key lessons from the programme and highlights important challenges for designing services and approaching change by focusing on flow. Flow Cost Quality ran in two NHS hospital trusts: South Warwickshire NHS Foundation Trust and Sheffield Teaching Hospitals NHS Foundation Trust. South Warwickshire looked at the emergency flow for all adult patients, while Sheffield focused on one clinical subspecialty - geriatric medicine. The case studies that accompany the report provide more details of the work done by each of the trusts.

Fully up to date, this new edition covers all aspects of care for women developing disorders during pregnancy.

A Manual of Fundamental Autopsy Practice, Third Edition

Your Chance to be Involved

Your Hospitals

Created in partnership with the Association of Cancer Physicians (ACP) Structured problem solving approach illustrated through 38 case studies Suitable for acute oncology teams including in the community, and trainees Provides a template for acute service development and emergency treatment The development and delivery of acute oncology services have undoubtedly improved the care of cancer patients, the management of acute complications of cancer and its treatment, and our approaches to diagnosing patients who present with cancer and no obvious primary site. There remains a need to ensure that practitioners are kept fully informed and up-to-date about the appropriate clinical care to be provided in the setting of acute oncology, and to continue a dialogue on the best way to deliver acute oncology services within limited resources. Since the first edition of Problem Solving in Acute Oncology was published there has been continued development and expansion of services. The importance of the involvement of primary care in delivering acute oncology nationally has been increasingly recognized, leading to the development of

ever stronger links between the two. Closer working with acute medicine physicians has also improved the care of acute oncology patients; work is ongoing to encourage closer collaboration between acute oncology services and clinical haematology. This updated text is particularly helpful and timely. It will serve as a valuable resource for those who continue to develop excellent acute oncology services, as well as provide a source of training and an update for clinicians working in this challenging clinical area. This book proposes a template that can be used by any professional involved in the planning and delivery of acute oncology care around the world. The book is formally supported by the Association of Cancer Physicians (ACP). This highly patient-centred, readable text will be of value to clinicians, healthcare strategic and operations managers, and doctors in training, in their daily work.

It begins by discussing issues such as legislation governing autopsies, religious attitudes and ensuring safety, before covering the procedures of external examination, evi

To many patients and indeed health care professionals, IVF is the ultimate treatment for infertility. However in many cases IVF is not feasible and may not be indicated. IVF remains a largely inefficient procedure that often does not succeed in achieving a pregnancy. There remains a strong place for other fertility interventions, many of them surgical in nature. Surgical interventions can be used as a stand-alone fertility treatment or as an adjuvant treatment used in conjunction with other assisted conception treatments. Despite the continuing use of such techniques by reproductive surgeons, there remains a clear gap in the literature regarding resources to supplement formal training in the field or to provide a reference for established and aspiring practitioners.
